THE
HOMŒOPATHIC
DOMESTIC PHYSICIAN.

BY
CONSTANTINE HERING, M.D.

SEVENTH AMERICAN EDITION.

PHILADELPHIA :
F. E. BOERICKE,
Hahnemann Publishing House.
1883.

"THE GREATEST TRIUMPH OF A SCIENCE IS WHEN IT BECOMES
THE COMMON PROPERTY OF THE PEOPLE AND THUS
CONTRIBUTES TO THE COMMON WEAL."

Copyrighted by Theresa Hering, 1883.

EDITOR'S PREFACE.

Not long before the death of the lamented author of this work, the correction of the last English edition, now for some years out of print, was undertaken by his daughters, Mrs. J. Foster Pope and Mrs. Dr. C. B. Knerr. They compared it, page by page, with the latest German edition (the fourteenth), which had but a short time previously been subject to a thorough revision at Dr. Hering's hands. Some material was eliminated, and considerable matter was added from the German.

The present editor, a former assistant of Dr. Hering, undertook, at his desire, the task of superintending the publication of the work. Some additions to the text have been made, a few remedies introduced, and, at times, slight alterations in the arrangement effected, but the well-known views of the author have been respected in whatever has been done, but for unavoidable reasons, the issue of the present edition has been delayed until this time.

For the table of contents and the very complete index, the editor is indebted to the careful labors of Dr. L. J. Knerr.

CLAUDE R. NORTON, M.D.

PHILADELPHIA, JANUARY, 1883.

CONTENTS.

	PAGE.
Preface	3
Introduction	15
Directions for Prescribing	16
Administration of the Medicines and Repetition of Doses	18
Regimen of the Sick during Homœopathic Treatment	21
Instructions for Patients how to communicate their cases to a Physician by letter	25
List of Medicines	32

PART FIRST.

OF THE MOST COMMON CAUSES OF DISEASE.

CHAPTER I.—*Affections of the Mind.*

Sudden Emotions	33
Grief and Sorrow	36
Vexation	38
Anger	40
Sensitiveness and Irritability	40

CHAPTER II.—*Consequences of Colds.*

Remarks	42
Catarrh	43
Cough	44
Difficulty of Breathing	45
Diarrhœa	45
Pain in the Bowels	46

Headache	47
Affections of the Eyes	47
Affections of the Ears	47
Toothache	48
Sore Throat	48
Nausea and Vomiting	49
Rheumatic Pains	49

CHAPTER III.—*Consequences of Overheating, immoderate Exertion and great Exhaustion.*

Overheating	52
Sun-strokes	52
Headache	53
Diarrhœa	54
Fatigue	54
Sitting up at Night	57
Confinement and much Mental Application	58
Excesses	58
Loss of Fluids	60

CHAPTER IV.—*Consequences of Surfeiting and Disordered Stomach.*

Remarks	60
Overfeeding of Children	62
Headache	63
Vomiting	64
Flatulency	65
Colic	65
Diarrhœa	65
Sleeplessness	66
Nightmare	66
Fever	66
Rash	66
Indisposition from Ice or Cold Water	66

CHAPTER V.—*Consequences of Spirituous Liquors, Coffee, Tea, Tobacco, Acids, etc.*

Intoxication	69
Effects of Intoxication	72
Delirium Tremens	73
Bad effects of Coffee	74
Effects of Tea Drinking	75
Effects of Smoking Tobacco	75
Injurious effects of Sour Food	76

CHAPTER VI.—*Effects of Injurious Drugs in general use, and Remedies to counteract them.*

Remarks	77
Effects of Herb Teas	77
“ Opium or Laudanum, Morphine	77
“ Hydrate of Chloral	78
“ Peruvian Bark or Quinine	78
“ other Drugs	79
“ Magnesia	80
“ Sulphur and Iodine	80
“ Mercury	81
“ Lead	82
“ Arsenic	83
“ Iron	83

CHAPTER VII.—*Adulterations and Poisons.*

Remarks	84
Adulteration of Wine	84
“ Vinegar	86
“ Malt Liquors	86
“ Brandy	87
“ Sweet Oil	87
“ Milk	87
“ Butter	87
“ Flour	87
“ Bread	87
Poisons in the Air	88
Poisons in the Water	89
Milk	89
Meat	89
Vegetables and Fruits	90
Mushrooms	91
Kitchen Salt	91
Kitchen Utensils	91
Paints	92
Cosmetics and Washes	93
Panaceas and Vermifuges	94

CHAPTER VIII.—*Of Poisoning.*

What is to be done in cases of Poisoning	96
Treatment when the Poison is ascertained	102
Poisonous Gases; Antidotes and Treatment	103
Poisoning by mineral and other strong Acids; Antidotes and Treatment	107

Alkaline Poisons; Antidotes and Treatment	108
Other Substances which have a powerful effect; Antidotes and Treatment	108
Metallic Substances; Antidotes and Treatment	110
Vegetable Poisons; Antidotes and Treatment	112
Animal Poisons; Antidotes and Treatment	114
Poison generated by Disease of any kind	116
Poisoned Wounds	117
Table of Antidotes to the most powerful Poisons	122

CHAPTER IX.—*External Injuries.—Concussion, Bruises, Sprains, Dislocations, Fractures, etc.*

Concussion of the Brain	123
Overlifting	124
False Steps	125
Bruises (Contused Wounds)	125
Bruises of the Eyes	126
Shocks and Bruises of the Head	126
Sprains	126
Dislocations, Luxations	127
Fractures	127
Wounds	128
Burns and Scalds	135
Frost-bites	138

CHAPTER X.—*Foreign Substances introduced into the Human Body.*

Into the Eye	139
“ Ear	140
“ Nose	141
“ Throat (Œsophagus)	141
“ Stomach and Intestines	144
“ Larynx or Windpipe	145
“ Skin	147

PART SECOND.

TREATMENT OF DISEASES.

CHAPTER I.—*Affections of the Head.*

Giddiness, Vertigo	149
Weakness of Memory	150
Determination of Blood to the Head	151
Headache	153
“ from Determination of Blood to the Head	153
“ caused by Catarrh	154
“ from Rheumatism	155
“ “ Disordered Stomach and Bowels	156
“ “ Constipation	156
Sick Headache	157
Nervous Headache	160
Headache caused by Suppression of Rheumatism, Gout, etc.	164
Losing the Hair	165

CHAPTER II.—*Diseases of the Eyes.*

General Remarks	166
Inflammation and swelling of the Eyelids	167
Stye on the Eyelid	169
Inflammation of the Eyes	170
Eyes affected by Scrofula	172
Weakness of Sight, with Remarks on the Use of Spectacles	175
Short-Sightedness	175
Far-sightedness	176
Attacks of Blindness	177
Dread of Light	178
Squinting of Children	178

CHAPTER III.—*Affections of the Ears.*

Eruptions	179
Mumps	179
Inflammation of the Ear	180
Earache	181
Running of the Ears	183
Buzzing in the Ears	185
Hardness of Hearing	186

CHAPTER IV.—*Affections of the Nose.*

Pains and Eruptions	188
Swelling of the Nose	188
Bleeding of the Nose	189
Ozæna	191
Catarrh or Cold in the Head	191

CHAPTER V.—*Affections of the Chest.*

Hoarseness	194
Cough	196
Whooping Cough	206
Croup	210
Congestion of the Chest	214
Hemorrhage from the Lungs; Spitting of Blood	214
Bronchitis, including Catarrh on the Breast of Children	219
Palpitation of the Heart	222
Asthma	224
Pleurisy, Inflammation of the Lungs and Stitch in the Side	228
False Pleurisy, Stitch in the Side	228
Inflammation of the Lungs	230
Consumption of the Lungs	232

CHAPTER VI.—*Affections of the Throat.*

Sore Throat or Quinsy	233
---------------------------------	-----

CHAPTER VII.—*Affections of the Teeth and the Face.*

Toothache	238
Swelled Face	261
Faceache, Neuralgia, Tic Douloureux	262

CHAPTER VIII.—*Affections of the Mouth.*

Bad Taste in the Mouth	264
Offensive Breath	265
Scurvy in the Mouth, Canker of the Mouth	265
Affections of the Tongue	267

CHAPTER IX.—*Affections of the Stomach.*

Want of Appetite	268
Weakness of the Stomach, Dyspepsia, Indigestion	269
Catarrh of the Stomach	273
Heartburn, Water-brash	274
Nausea and Vomiting	275

Sea-Sickness	276
Pains or Spasms in the Stomach	277

CHAPTER X.—*Affections of the Abdomen.*

Colic	282
Flatulency	287
Inflammation of the Stomach and Intestines	288
Determination of Blood to the Abdomen	292
Worms	292
Itching of the Anus	294
Prolapsus Ani, Prolapsus of the Rectum	296
Hemorrhoids, or Piles	297
Diarrhœa	301
Dysentery	307
Common Cholera, Cholera Morbus	310
Asiatic (or Epidemic) Cholera	312
Constipation	314
Inflammation of the Liver, Pains in the Liver	318
Jaundice	319
Involuntary Emission of Urine,	320
Difficulty and Pain in making Water	320
Passing of Bloody Urine	322
Hernia, Rupture	323

CHAPTER XI.—*Diseases of Women.*

Menstruation (the Monthly Sickness)	324
Tardy Menstruation	325
Suppression of the Menses	327
Too Copious Menstruation	329
Painful Menstruation, Menstrual Colic	330
Chlorosis, Green Sickness	332
Cessation of the Menses	333
Leucorrhœa, Whites	334
Remarks on Pregnancy	335
Derangements during Pregnancy	336
Menstruation	337
Vertigo and Headache	337
Morning Sickness	339
Constipation	340
Diarrhœa	340
Pruritus, Itching	340
Fainting and Hysterical Fits	341
Toothache	341
Varicose Veins	342

Derangements during Pregnancy,	
Hemorrhoids or Piles	343
Pains in the Back and Side during Pregnancy	343
Cramps	343
Incontinence of Urine	343
Depression of Spirits	344
Miscarriage, Abortion	344
Menorrhagia or Flooding	347
Preparation of the Breasts	349
False Pains	349
Labor, Child-Birth	351
Protracted Labor	351
Spasmodic Pains, Cramps and Convulsions	353
Treatment after Delivery	354
Flooding after Delivery	354
After-Pains	354
Duration of Confinement	355
Irregularities of the Lochial Discharge	356
Milk Fever	357
Suppressed Secretion of Milk	358
Excessive Secretion of Milk	358
Involuntary Emission of Milk	358
Diarrhoea during Confinement	359
Constipation	359
Retention of Urine	360
Sore Nipples	360
Gathered Breasts	360
Weakness from Nursing	361
Falling off of the Hair	361

CHAPTER XII.—*Treatment of Infants.*

Reception at Birth	362
Apparent Death	362
Washing the Child	363
Dressing the Navel	363
The Meconium	364
Swelling and Elongation of the Head	364
Putting the Child to the Breast	364
Inflammation of the Eyes	365
Obstruction of the Nose, "Sniffles"	366
Sore Mouth, Thrush	366
Sore Throat	367
Jaundice	367
Excoriation	368

The Gum	368
Retention of Urine	368
Constipation	369
Diarrhœa	369
Colic	370
Swelling of the Breasts	371
Crying of Infants	371
Restlessness and Wakefulness	372
Hiccough	373
Scurf on the Head	373
Milk-crust	373
Scald Head, Ringworm on the Scalp	374
Spasms or Convulsions	375
Dentition, Teething	377
Summer Complaint, Cholera Infantum	379
Rupture of the Navel, Umbilical Hernia	382
Discharge from the Ears	382
Heat Spots, "Prickly Heat"	382
Whites or Leucorrhœa of Children	383
Weaning	383
Limping, Lameness	384
Stuttering	384
Squinting	384
Wetting the Bed	384
Vaccination	387

CHAPTER XIII.—*Eruptive Fevers.*

Rash	392
Measles	393
Scarlet Fever, Scarlatina	395
Scarlet Rash	398
Chicken-Pox	398
Small-Pox	398
Varioloid	400

CHAPTER XIV.—*Diseases of the Skin.*

Itching of the Skin	400
Itch, Scabies	401
Roseola	402
Nettle Rash, Urticaria	402
Erysipelas, St. Anthony's Fire, Rose,	404

INTRODUCTION.

THIS book is intended to be a guide, by the aid of which, in many cases of disease, a cure may be effected with homœopathic medicines. Those whom experience has convinced of the advantages of the system of *Hahnemann*, will soon learn how to make use of it; and to those who have had no opportunity of testing the merits of homœopathy, it will give a chance of trying it, instead of the so-called domestic remedies.

It is intended to be an adviser in many cases of indisposition, when one will not or cannot consult a physician. To persons living in the country, it will prove valuable, when medical aid, especially at night, is only to be had at the cost of much trouble, delay and expense; with however this guide at hand, relief may be obtained in many cases of disease.

As this work is intended for the great mass of the community, and to make the homœopathic doctrines intelligible and useful to all, the author has tried to express himself with distinctness and simplicity, in order to be *generally* comprehended. This common-place, familiar style may, to a certain extent, enable a great many to prescribe for themselves. But the contents of this book can make no one a homœopathic physician. It has been said by the opponents of our doctrine, that an acquaintance with the old system of medicine was unnecessary to a homœopathic physician: but this is a great error. No one can be a successful disciple of *Hahnemann*, who is not well versed, as *Hahnemann* himself was, in the learning of the medical schools; and it would be just as impossible for him to act judiciously without a knowledge of anatomy, physiology, pathology, surgery, and materia medica, together with chemistry and botany, as for a man, ignorant of navigation and seamanship, to carry a vessel with safety into port.

If, in giving this work to the public, the author can aid in driving from common use the so-called domestic remedies, such

as chamomile, hoarhound and other teas, paregoric, Epsom-salts, magnesia, and the whole host of so-called simple remedies, and also all the nostrums or patent medicines, some of which are to be found in almost every nursery, and the habitual use of which is such a prolific cause of innumerable drug-diseases, he will have accomplished the chief object of its publication, and have substituted for an irrational and pernicious practice, a judicious and rational one.

DIRECTIONS FOR PRESCRIBING.

Examine the table of contents, until you find the chapter where the complaint is spoken of for which you wish to have advice. Do not look for the common name only which may be given to such a complaint by the Old School doctors. Most of these names are calculated to mislead; but look for the principal symptoms of which the patient complains. In order to facilitate this as much as possible the work is divided into two parts; the *first* treats of the most common causes of disease; the *second*, of diseases occurring most frequently in the different parts of the body. Therefore, when the cause of sickness is obvious, or probable, first examine what is said of it in Part I.; then see what is said of the *disease* in Part II. The latter are treated of in regular succession, commencing with the *head, neck, chest*, and so on downward, enumerating under each head the disease to which that part is principally subject, and concluding with *General Diseases*.

By bearing this arrangement in mind, the reader will readily find what he may desire. Suppose for instance a case of cold attended with headache and diarrhœa; look first for "Cold" in the first part, chapter second; then for "Headache" in the second part, chapter first; then for "Diarrhœa" in the same, chapter tenth. If a person is taken sick, and the direct cause is not perceptible, but the patient complains of pains in various parts of the body, examine the affections to which these several parts are subject; thus you will readily find the remedy applicable.

There are often several causes, and one remedy is not suitable for them all; in this case give one remedy after another; select

first one for the *worst symptoms*, or still better, for the symptoms which appeared *last*, or the cause which acted last. One, who has taken cold, will easily get his stomach out of order; one, whose stomach is disordered, will easily take cold. Consider then first, the *last cause* as the more important one.

Always give but one remedy, and only when this does no more good, another one.

When the patient appears to suffer from several complaints at the same time, it is well to ascertain and note down all the symptoms, without referring to the book, lest the patient may state something different from what is really the case, and thereby lead to the application of an improper remedy. Having thus accurately noted the complaints of the patient, inquire minutely then into all the attending circumstances. 1st. The precise locality of the pain. 2d. Require of the patient a description of the pain, and to what it may be compared—whether tearing, cutting, beating, throbbing, etc. 3d. The occasion of its getting worse or better, according to the time of day—morning, evening or night—to the state of the weather, whether damp, cold or dry—to the position of the body, whether when quiet or in motion—whether before or after eating—after sleep, when touched, pressed, etc. 4th. Note the combination of symptoms, if any; for instance, when coughing is accompanied with headache; or headache with inclination to vomit; or with this inclination, shivering, etc. Having written down these observations, look then into the book for the principal symptoms, and you may find the proper remedy.

Examine “Instructions for patients how to communicate their cases to a physician by letter,” at the end of this introduction. You will find there a detailed statement of all questions to which answers are required, and upon which the selection of a real homœopathic remedy depends. This is, to be sure, troublesome, but you can have no success without it; if you succeed without this troublesome examination, it is by chance, not by skill. If a doctor tells you that he is so learned and skillful, that he can prescribe without these questions, that he, for instance, can see by the eyes, tongue, etc., what medicines to give, he is a deceiver, and those who believe in him, show that they know nothing whatever of true homœopathy.

Do not be discouraged because of the difficulties experienced at first in finding a suitable remedy, for these difficulties will vanish as soon as you become familiar with the book.

If you give the wrong remedy, the patient will, of course, not get better, but it is not so bad as under the Old School practice. For a homœopathic medicine will relieve, if it is the right one, but if it is not the right one, it will do no harm. Usually the disease remains as it was, sometimes though it changes, you must look then into the book for a more suitable remedy.

You can do harm with a homœopathic remedy only if you give too much of it and too often, or if you give too many remedies, one after the other, without waiting for their effects. Let every remedy have its time to act, as is often stated in the book, and be consistent in giving nothing else, as long as there is the slightest improvement. The greatest improvement will often take place without any other remedies.

ADMINISTRATION OF THE MEDICINES AND REPE- TITION OF DOSES.

The medicines may either be administered dry, by placing them upon the tongue, or dissolved in water.

In most cases, four or five globules should be placed dry on the tongue. For infants, one globule will be amply sufficient for a dose; if the tongue is dry add a few drops of water; even new-born infants are able to swallow that.

Where repeated doses of the medicine at short intervals are required, the appropriate remedies should be administered in solution in water. For this purpose take a clean tumbler which has contained nothing but milk or water, else you must rinse it first with cold and afterwards with hot water, dry and heat it on a stove as much as the glass will bear, and then suffer it to cool. Fill it half full of water, as pure as you can get, put eight or ten globules—or if a trituration, as much as will lie upon the point of a penknife—of the medicine into the water, and mix it thoroughly by repeatedly pouring it from one tumbler into another, or if you have only one tumbler, by means of a clean spoon. Keep the tumbler containing the medicine, well covered

with a saucer or piece of paper, in a cool place, free of odors of any kind.

When thus prepared, a dessertspoonful to adults, or a teaspoonful to children may be given at a time. In acute cases the medicine may be repeated every one, two or three hours; but in chronic complaints or those of long standing, not oftener than once or twice a-day.

After the first dose of every medicine, you should watch closely to observe what changes, if any, take place in the patient. In very dangerous and painful cases, wait from ten to thirty minutes; in other serious complaints, one to two hours; and in chronic cases one to two days. The patient is then either better, worse, or the same. If better, give nothing more as long as the improvement lasts. If a sudden improvement ceases as suddenly, and the case gets worse, give another dose; this second dose may in some cases be followed at first by an increase of the complaint, but in a short time by a more decided and lasting improvement.

If a complaint has improved from a remedy given for its cause, but the same cause has again occasioned the old trouble, give another suitable remedy. For instance, if the bad consequences of a fright have been removed by Opium, but a fresh fright has caused the same symptoms, give Aconitum. If you have taken Bryonia for the consequences of having taken cold, and have been relieved by it, but a fresh cold makes you worse again, take Aconitum.

When the patient, after having taken the medicine once, or oftener, begins to feel better, however little, he should discontinue it, lest the healthful progress of the cure be interfered with by taking too much; but as soon as the improvement ceases the same medicine should be taken again; or in case the symptoms have altered, another more appropriate one.

If the patient is worse after the first or second dose, the symptoms are either the same, but worse, or there are new symptoms instead, or in addition to the former ones. If the latter case, give *another* remedy, but if the former, when the medicine aggravates the symptoms, and makes the patient *temporarily* worse, which is, nevertheless, a good sign, the patient should *cease tak-*

ing it, and wait for the effects. Should the aggravation be violent, it may be relieved by smelling camphor, or sweet spirits of nitre.

It happens sometimes, that the most violent pains are increased very much by the smallest dose of the suitable remedy; in such cases give a spoonful of black coffee, and as soon as the aggravation has ceased, repeat the remedy, if made worse again, repeat the coffee, and so on until the improvement is permanent. A homœopathic physician of the right stamp, a great master, wrote to the author, that he has given in this way with the greatest success, *Colocynthis* and coffee for colic; *Pulsatilla* and coffee for rheumatic pains in the limbs; and *Mercurius* and coffee for faceache; in the last case the cure was complete and permanent only after the fifteenth dose.

In very tedious cases, when the right remedy has been chosen and given in but one dose, and when the patient, after a short aggravation of the symptoms, commences to grow better, he will sometimes, in a few days or a week, get worse again; he who *can now wait*, and give nothing more, will witness most remarkable cures, which will be the more permanent and complete, the less they have been interfered with.

If the beneficial effects of the medicine are interrupted, or cease entirely, and the patient grows worse in consequence of taking cold, eating improper food, etc., he should take a medicine to counteract the cause which occasioned this interruption, and then again the medicine which he had previously taken.

With regard to the external application of the *Tinctures of Arnica, Ruta, etc.*, a lotion of sufficient strength for most purposes may be made by putting five or six drops of the tincture in half a tumbler of water. It may be applied to the injured part three or four times a day, or as often as mentioned under each particular case.

While taking homœopathic medicines, strict attention should be paid to the following rules of diet.

REGIMEN OF THE SICK DURING HOMŒOPATHIC TREATMENT.

The general rule to be observed is, that patients should partake of light, digestible, nourishing food to satisfy hunger; and of such drink as nature requires to allay thirst; and abstain from everything of a medicinal or injurious nature.

In acute or febrile diseases, only the lightest and most simple kinds of nutriment are proper, viz.:

Pure cold water in preference to all other drinks; or water with the addition of some sugar, raspberry or strawberry syrups, or quince and apple-jelly prepared without spices. Barley-water, rice-water, thin oatmeal gruel, panada, gum Arabic water, whey, milk, preparations of arrow-root, sago, tapioca, semolina, or tous-les-mois, all without any other seasoning than a little salt or loaf sugar, or one of the syrups above-mentioned.

Toast-water: the toast should be made from stale bread, either home-made or from bakers who make use of neither potash, soda, or alum; the slices ought to be thin and thoroughly toasted, but not too brown, and never black. To make a good toast-water, pour boiling water on the toast while hot and let it stand.

Ice-water is often injurious and increases the thirst. The water, having been filtered if impure, should be cooled if possible without putting the ice in it. Put the vessel, containing the water to be cooled, into a larger vessel, a wooden one is preferable, which contains pieces of ice, and let it remain till sufficiently cold. If this cannot be done, put a lump of ice in the water and take it out again as soon as the water is cooled.

Most kinds of ripe, succulent fruits, possessing little or no acidity, fresh or prepared by cooking, and eaten in moderation: as ripe grapes, sweet apples, pears, peaches, raspberries.

Some kinds of dried fruits: as apples, quinces, peaches cherries, prunes, dates, figs, etc.

All imported dried fruits, raisins, figs, etc., should be washed before using, first in cold and afterwards in hot water.

Sweet oranges when well ripened are allowed, but all decayed, spotted and sour ones, ought to be avoided.

With regard to apricots, nectarines, plums, gages, watermelons and cherries, the physician should be consulted.

Colored toys, if the colors are not fixed, are on all occasions to be withheld from children, also vulcanised gum elastic toys.

All perfumery, particularly musk, hartshorn, camphor, paccioli, Eau de Cologne, Eau de Luce, or other aromatic waters, strong smelling flowers, cosmetics and scented or medicated tooth-powder.

Tobacco, if used at all, should be used very moderately.

Every medicine, excepting those prescribed by the physician, ought to be avoided; not only all medicines procured at the shops, and all such as are empirical, but every description of domestic medicines, as all manner of herb teas, syrups, medicated poultices and irritating or medicinal substances applied to the skin.

Blood-letting by the lancet, or by leeches and cups, and laxative injections, except of those of cold or lukewarm water, are likewise forbidden.

Hot baths are to be strictly avoided, especially baths impregnated with herbs, sulphur, and other medicaments. Tepid or cold sponging baths, or rubbing with a wet towel, may be used, by most patients daily. For other employments of cold water the advice of an experienced physician must be sought.

Linen, cotton, silk or leather, worn next the skin is preferable to flannels, excepting for persons much exposed to the weather, or for little children.

The patient should, if possible, use moderate exercise, in the open air for an hour or more daily; and his chamber should be well ventilated every day.

Rooms papered with yellow paper, or stained or painted yellow, and yellow transparent window-shades or curtains should be avoided; the best color for the walls of a sick room is a light rose-color, particularly alternate stripes of white and light rose-color. The window-shades should be of a grayish or light blue tint.

Physical labor, which gives the mind the proper direction to usefulness, while it exercises the body, should be daily used in chronic diseases as far as the strength will allow of it.

Homœopathic medicines should not be taken too soon after eating; and for about an hour after taking them the patient had better abstain from eating or the use of tobacco, and, if possible, from much mental or bodily exertion.

INSTRUCTIONS FOR PATIENTS

HOW TO COMMUNICATE THEIR CASES TO A PHYSICIAN BY LETTER.

The patient should first describe his complaint in his own way, as though these instructions were not before him, viz.: its commencement, progress and presumptive causes. The age and sex of the patient, and whether married or single, should of course be communicated to the physician, if these circumstances be not already known. It would be well to mention whether the patient is of large or small stature, meagre or stout, feeble or robust. Whether he easily takes cold, and is very susceptible to other external impressions. Is the complexion florid, or pale, or dark? What is the color and condition of the hair, and the color of the eyes? Concomitant bodily infirmities, as hernia (rupture), prolapse of the womb, curvature of the spine, lameness, etc., should be made known. Is the disposition of the patient mild and placable, or boisterous and violent? firm or yielding, lively and communicative, or reserved and taciturn; anxious, apprehensive, or timorous, or irritable, etc.? Are his mental emotions of long continuance, or are they very transient?

The patient is next required to give an accurate and particular description of the incidents or symptoms of his disease, such as pains and other morbid sensations. He should describe precisely the region or the part, and on which side of the body they are seated, and how large is the space they occupy. Whether the pains are obtuse, and may be denominated dull or pressing, or whether they are sticking or piercing, rending, throbbing, perforating, pulling or drawing, pinching, snatching, gnawing, cutting, griping, burning, obtusely prickling or crawling, itching, tickling, numb or as if the part were asleep, as if from a sprain or contusion, or whether they consist of several of these sensations combined, or may be more accurately represented by other terms.—Are the

symptoms continued, or do they remit or vary in intensity from time to time? Do they recur at particular times of day, or at certain intervals of one or more days? Is their recurrence, aggravation, diminution or cessation connected with the exercise of any bodily function? Do they arise or disappear, are they increased or diminished by exercise, or during rest, by lying down or sitting, by stretching, or bending the body, by walking, standing, warmth or cold, in the open air or within doors, by light, noises, talking, eating, drinking or swallowing soon after eating, by the motion of the affected part or by touching or pressing it, by mental emotion—fright, anger, during bodily or mental exercise, reading, etc., etc.—Are the symptoms associated with anxiety greater or less? do they impair the powers of thought or recollection, or the due exercise of the senses? (seeing, hearing, etc.)—Are the motions or functions of the affected part in any way impaired or disabled? or is the local disease associated with complaints in other parts, and with what? does it alternate with other complaints? Is the affected part red or swollen? Is the swelling hard or soft or painful to the touch, and does it leave an indentation after pressure with the finger?

During the sufferings of individual parts or functions of the body (even when these functions are not the principal ones) further information is to be given respecting the state of the patient's mind; whether he suffers patiently, or is inclined to weep, to be morose, passionate, despairing, greatly anxious or fearful, etc., or whether the mind is remarkably affected in these respects by the disease. Are the intellectual functions, power of thought, memory or desire or ability for mental or bodily exercise weakened?—Aberrations of mind, morbid affections of the moral and intellectual faculties are to be described by the narrators strictly as they are manifested by the patient's words or conduct.

Is there dizziness, or "a dull, heavy sensation" of the head.—Disorders of sight? Does the patient see objects indistinctly as through a veil or mist? Does he see dark specks floating before the eyes, or sparks, or false colors? Do objects appear double or quivering? Is the patient short—or long-sighted? Is the pupil contracted, dilated or very changeable? Are the eyes watery, red, inflamed, averse to the light? Do the eye-lids frequently glue

together? Do they open and close properly? Are they affected by convulsive motions or twitchings, or beset with styes? Are there specks upon the cornea?

Disorders of hearing: Is there a roaring, whizzing, or ringing noise in the ears? Is the ear-wax dry or fluid, oozing from the ears, or fetid?

Are the nostrils obstructed? Is there a cold in the head with or without a discharge from the nose? Sneezing? Sense of smell? Soreness and rawness of the nostrils, or a bad smell from them? Bleeding at the nose?

Are the teeth incrustated with tartar, loose, decayed, and have any fallen out or been extracted? Are the gums pale or red, hard or soft, spongy, swollen, apt to bleed, or retracted from the neck of the teeth?

Is there dryness of the mouth? Or excessive flow of saliva? Is the saliva viscid, slimy, fetid, bloody? Is the surface of the tongue, tonsils, uvula, palate, fauces or lips affected with blisters, swellings, or ulcers, or covered with mucus? Is the tongue dry or moist, acutely sensitive, chapped, sore or raw, clean or covered with fur (white or yellow)?—Are the functions of speech, chewing, or motions of the tongue unembarrassed? Is swallowing performed without difficulty? (Is the swallowing of fluids or solids or of the spittle attended by no inconvenience?) Has the patient a bad breath? Is the taste natural or absent, slimy, salt, bitter, sour, foul?—Have the different articles of food their proper taste, or are they insipid, slimy, bitter, sour, salt, etc.?—How is the appetite and thirst? What articles of food or drink are preferred? What complaints arise after eating and drinking? Is the patient troubled with frequent belching of wind, with or without taste,—or does it taste of the food just eaten, or of what? Is there regurgitation of fluids from the stomach, or a collection of saliva in the mouth? and of what taste in either case? Is there vomiting of water, saliva, or mucus, of an acrid or bitter taste, or of a putrid taste and smell, or of a yellow, green or bloody aspect? Does the patient vomit coagulated blood, or food? Is there sickness or nausea? Is the abdomen tense, full, hard, or empty and retracted? In the case of pains or other complaints in the abdomen, the particular region in which they are seated should be accurately defined (for example: pit of the

stomach, region of the navel, immediately below the ribs, in which side, etc.). Is the patient troubled with flatulency? Is there frequent rolling and rumbling in the bowels? Does the wind readily escape, or is it retained, and what are the complaints which it seems to give rise to? Are the evacuations from the bowels effected with ease or difficulty? How frequent are they? what is their consistence? are they *faecal* or slimy, or bloody, etc.? What is their color? Are there any complaints immediately preceding, during or following a stool? Are there any large or small worms discharged? Are there abrasions or sore places, warts, or piles in the rectum or anus, and do the latter sometimes protrude or bleed? What complaints arise before, or during, or after the urinary discharge? And is the discharge scanty or copious? What is the aspect of the urine? (is it clear, high-colored, or turbid?) Does it soon change after evacuation and deposit mucus or sand, or a white, or red sediment? Does it contain blood, pus, or gravel?

Men are to give every information in relation to the sexual functions and the genital organs. Are there any discharges, what, and when? etc.

Women should relate every circumstance in relation to menstruation. At what age did it first appear? And have they been regular ever since? How are the periods now; are they regular, too frequent or is the interval too long. Too copious or scanty? How long did they continue while the patient was in health and how long since she became sick? What complaints precede, exist with or follow menstruation? What influence upon the discharge has motion or rest, etc.? Is the discharge red, dark, clotted, *foetid*?—Is the patient troubled with the whites? and how long? Constantly, or before or after menstruation? bland or excoriating? watery or thick? white, yellow, or greenish? *foetid*?—Has she ever had the green sickness, or uterine diseases, and in what did they consist? Finally intimations concerning sexual desire, and its influence upon the health are desirable for the physician.

When the patient is or has been married: Has she had children, and has she often conceived?—Has she ever had a miscarriage, and how often? How was it occasioned and what were the accompanying symptoms (for example: great loss of blood)?

What complaints were there during pregnancy?—What were the incidents during labor and child-bed? Were injuries, hæmorrhage, or diseases attendant? or are any complaints remaining therefrom?—Did the patient nurse her children at the breast? And was the nursing attended or followed by any complaint?—Has she suffered with sore nipples, or inflamed breasts? And, from this cause or others, has she indurations of the breasts?

At what age did menstruation cease? and with what complaints was the cessation accompanied? or with what effect on the health?

Is the breathing short, or otherwise oppressed? Can the patient ascend a height? Is the breathing asthmatic, wheezing or rattling? Does the patient make any complaint on drawing a deep breath? How is the voice, rough, hoarse, hollow, etc.? Is there a cough? is it slight and short, or hard and difficult? does it seem to come deep from the chest? do the paroxysms of coughing last long, and are they attended by swelling of the face and loss of breath? How does the cough sound? Is it dry, or followed by expectoration? Is expectoration easy or difficult, scanty or copious, mucous, purulent, resembling saliva, bloody (interspersed or tinged with blood, and of a bright, or dark color, or is it pure blood?) white, yellow, green, ash-colored, etc.? Does it taste salt, sweet, bitter, or what taste has it? Is there a superabundance of mucus in the larynx or trachea, or does it seem to lie deep in the chest? In what part of the organs of respiration is seated the irritation to cough? and from whence proceeds the matter expectorated? Is there palpitation of the heart? or throbbing in other parts of the body? Does the patient suffer from transient flushes of heat? He can perhaps describe the condition of the pulse. Are the glands beneath the ear, under the jaw, in the arm-pits, on the head, or in the groins, swollen or suppurated? Is the patient afflicted with goitre (this is an enlargement of the gland over the wind pipe).

Are there swellings of the bones or joints, are there tubercles or swellings, or swollen or knotted veins? Are there any parts red, swollen, and painful? Are the hands or feet swollen? Is there lameness of one or more of the limbs? Are there cramps or spasms, tremor, twitching or starting, or falling asleep, or other morbid sensations in any of the limbs? Is the skin pallid, yellow, etc.? Is it dry or inclined to sweat, or otherwise in an unhealthy condition?

Is there itching of the skin (tickling, slight prickling, or a sensation of biting, burning, crawling, sticking?) is it relieved by scratching, or is the sensation thereby only changed for another? The presence in the skin of wheals, swellings, boils, chilblains and corns is to be mentioned, and the attendant sensations described. Also cutaneous eruptions, as miliary eruptions or rashes, spots, pimples, vesicles and pustules are to be described, viz.: their seat, color, abundance, size; whether filled with water or pus, whether covered with scabs or crusts, and their duration. Also, tetter, scaliness, scald, brown and blue spots, moles, freckles, cracks or fissures of the skin, blisters with corrosive discharges, ulceration at the angles of the mouth, warts, swellings of the bones, chafing of the skin, malformation of the nails, falling out of the hair, scales or scabs on the head. When there are ulcers, whether they are inflamed or overgrown with what is called proud flesh, whether their margins are elevated, whether they easily bleed, or their bottom looks red, black, or as if containing a fatty substance; whether the matter issuing from them is copious, thin, thick, bloody, white, yellow, black, corrosive, foetid.

Is there chilliness, or a feeling of heat? Chilliness, heat, or sweat of particular parts?—Sweating of the feet, whether warm, cold, or foetid? When the patient has fever, do the paroxysms consist of a cold, hot and sweating stage? Do they alternate with or succeed each other? What is the order of their succession? With what intensity, and how long does each continue? Are they general, or do they affect particular parts only? with or without thirst? with paleness or redness of the face and skin? Are there other symptoms accompanying the paroxysms of fever (cold, hot and sweating stage)?

Particular paroxysms of disease, as swooning, cramps, epilepsy, spasms of the stomach, asthma, etc., are to be accurately described in their commencement, course and termination. Whether they are changed, aggravated or relieved at certain hours of the day, during the performance of any bodily function, or by certain postures of the body.

Does the patient sleep long, or is he restless, and is the sleep interrupted by frequent waking or startings? Does he talk or moan in his sleep, or has he the night-mare? Is the sleep disturbed by anxious dreams, and of what character? In what posture does

the patient lie during sleep? Is he accustomed to sleep with his mouth open? How is his strength? Is he obliged to lie down, or can he remain up? Does he feel languid, weary, or sluggish, etc.? Is he emaciated?

The patient should relate his previous diseases,—particular cutaneous diseases,—itch, eruptions of the head, tetter, erysipelas, small-pox, measles, pimples on the face or any itching eruption of the skin.—Also, whether he has had scrofula (glandular swellings), rickets, gout, rheumatism, piles, difficult dentition, worms, cramps, epilepsy (convulsions), whooping-cough, inflammation of the lungs, or other inflammations, intermittent or remittent fever, jaundice, hemorrhages, diseases of the teeth, apoplexy and palsy, sweating of the feet, ulcers, or other diseases. He should relate how long he has labored under either of these affections, how long he was under treatment for them, what were the remedies employed, and what he has used for the existing disease. Has he resorted to medicated baths, herb teas of any kind, blood-letting, emetics or cathartics, teas “for purifying the blood,” valerian tea, “strengthening medicines,” Peruvian bark, etc. And is he accustomed to the use of any of these remedies? Is he in the habitual use of distilled or fermented liquors, coffee, tea, much fat victuals, acid, or highly-seasoned food?—Does he partake of much food, and what?—His manner of living should be described, and whether he is accustomed to the use of woollen clothing, and whether his habitation is in a wholesome condition.—When passions or emotions of the mind retard recovery, or have caused and sustained the disease, he should not conceal these circumstances from the physician. For example: disappointed love, blighted hopes, grief, domestic unhappiness, want. Neither should he conceal the fact of former habits of licentiousness, if any such have existed, and which may have contributed to his disease. If he has always been of a weakly frame of body, probably his disease is hereditary; and if when an infant, he did not receive his nourishment at the breast, but was brought up “by hand,” the physician should be informed of the fact.

LIST OF REMEDIES.

Aconitum.	Crocus.	Petroleum.
Antimonium crudum.	Cuprum metallicum.	Phosphorus.
Antimonium tartaricum.	Drosera.	Phosphoric acid.
Argentum nitricum.	Dulcamara.	Platina.
Apis.	Euphrasia.	Pulsatilla.
Arnica radix.	Ferrum.	Rheum.
Arsenicum.	Ferrum phosphoricum.	Rhus tox.
Belladonna.	Gelseminum.	Ruta.
Bryonia.	Glonoine.	Sabina.
Calcarea.	Hamamelis.	Sambucus.
Cantharides.	Hepar sulph.	Sanguinaria.
Capicum.	Hyoscyamus.	Secale.
Carbo vegetabilis.	Ignatia.	Sepia.
Causticum.	Ipecacuanha.	Silicea.
Cepa.	Lachesis.	Spigelia.
Chamomilla.	Lycopodium.	Spongia.
China.	Mercurius sublimatus.	Staphisagria.
Cina.	Mercurius.	Stramonium.
Cinchona (see China).	Natrum muriaticum.	Sulphur.
Cocculus.	Nux moschata.	Viola tricolor.
Coffea.	Nux vomica.	Veratrum album.
Colocynthis.	Opium.	Zincum.

FLUID FOR EXTERNAL USE.

Arnica, tincture of root.	Cantharides.	Ruta.
Calendula.	Hypericum.	

The medicines should be kept in a dry and not too warm place, free from odors, and excluded from a bright light.

PART FIRST.

THE MOST COMMON CAUSES OF DISEASE.

CHAPTER I.

AFFECTIONS OF THE MIND.

SUDDEN EMOTIONS.

AFTER an agreeable surprise, if the pleasurable sensations are accompanied by great excitement, trembling, fainting, headache, etc., which may happen to women and children, give *Coffea*; particularly if they cry, weep, or laugh.

After a common *fright*, caused by a sudden noise, etc., give *Opium* if it can be given immediately; but if an hour or more should have elapsed, *Aconite* is preferable.

After a *fright*, with great *terror*, *Opium* is the best remedy.

Fright with *vexation*, *Aconite*; if followed by *sadness* or *grief*, *Ignatia*. If children after being frightened are still fearful, have great heat in the head and twitching around the mouth, give *Opium*.

If the *fright* is followed by pains in the forehead, sour vomiting or eructation, weakness and cold sweat, or stupor with internal heat, agitation and heaviness in the abdomen, or coldness of the body, with trembling or nervous twitch-

ing, oppression of the chest with anxiety, stiffness of the limbs, unnatural sleep with loud snoring, give *Opium* in water, a teaspoonful, every fifteen to twenty minutes; if better, less often. Should within an hour the difficult breathing be the same, particularly if after vomiting or coughing the patient should feel like suffocating, the face turn bluish, without snoring, children weep much and grasp about them, grown persons tremble as if in distress, breathing more like whistling than snoring, give *Sambucus*.

If the difficult breathing increases to suffocation, and violent pains appear in the stomach and pit of the stomach, give *Aconite*.

If the *fright* is followed by twitching of the limbs, or convulsions, insensibility, loss of sight, trembling, difficult breathing, involuntary evacuations, give *Opium*; and if this should have no effect within half an hour, *Ignatia*, or *Glonoine*. If their sight fails, if they sink down, become pale as death, or alternately pale and red, have twitching around the mouth, jerking of the limbs or spreading of the fingers, give *Glonoine*; if the back becomes stiff, *Ignatia*.

When children have been frightened into *fits*, and scream, tremble, have twitching in the arms and legs—if the head is hot, with much perspiration and redness of the face, give *Opium* every five or ten minutes; if not better in half an hour, *Belladonna*; but if they become very pale, *Ignatia*; if very cold, with involuntary evacuations, *Veratrum*. See “*Spasms*.”

In cases of simple *vomiting*, sickness of the stomach, or pains caused by a *fright*, *Aconite*.

For *diarrhœa*, caused by any sudden mental emotion, as grief, fright, bad news, the anticipation of any unusual ordeal, give *Gelseminum*; if they are cold and tremble, *Veratrum*; when internally hot and externally cold, or the body hot and the limbs cold, *Pulsatilla*. If the head is hot, *Opium*. See “*Diarrhœa*.”

For *fainting*, after a fright, *Opium*; if the patient becomes cold, sprinkle his face and bathe his feet with cold water; if it returns, let him smell camphor at short intervals.

When, after a fright, there is a *rush of the blood to the head*, give first *Opium*; if this fails, *Aconite*, and if it returns within six or eight hours, *Belladonna*.

When, after a fright, a person continues to be greatly agitated, *Belladonna* will afford relief; sometimes *Mercurius*, according to the symptoms, to be given hereafter.

If fright or mortification, produces *derangement of the mind*, and the blood rushes to the head, the pupils of the eyes are large, face red, burning hot, or pale and moist, nose dry, throat and neck sore to the touch, if the patient cannot bear anything about the neck, cannot sleep at all, or is raving mad, would run away, or fears imaginary things, give *Belladonna*.

If the throat and neck are very sensitive to the slightest touch, and the patient talks incessantly, changing the subject often, give *Lachesis*. If the patient is alternately, very indifferent, low-spirited, especially in the evening, or affected with paroxysms of laughter, or if he displays much pride and contempt for others, or fears the approach of death—or when, accompanied by a copious menstrual discharge, give *Platinum*; should this discharge, however, be diminished or suppressed, and *Platinum* not relieve, give *Pulsatilla*.

If *Belladonna* has given no relief, and the patient remains much agitated, the least exertion producing trembling and rush of blood to the head, cannot sleep on account of frightful visions, is worse at night, cannot bear the heat of the bed, wishes to escape, or is quarrelsome, or complains of his friends and of all about him, give *Mercurius*.

Fear is frequently combined with fright and anxiety, and the same remedies may be used. When children are timid, give *Aconite* in the evening, or *Belladonna* in

the morning; if they fear being alone, *Arsenicum*; if afraid of people, *Pulsatilla*.

If the fear continues, if they imagine that they see dead persons, give *Arsenicum*; that thieves are concealed in the house, *Natrum muriaticum*.

When other symptoms appear, particularly stupefaction, difficulty of swallowing, convulsions with twitching, laughing when asleep, starting with apprehension, or a desire to escape, give *Hyoscyamus*.

GRIEF AND SORROW.

The consequences of grief and sorrow, if long continued, are worse than those of other affections; without the proper moral remedy, medicines are useless. Whoever cannot find the former, need not expect relief from the latter. The first sudden consequences are, however, in most cases soon overcome by medicines.

For silent inward grief, combined with mortification, for suppressed vexation, affliction which cannot be quieted, for silent grief caused by misplaced affection, or in consequence of losses which cannot be forgotten—for a grief continually preying upon the mind, give *Ignatia*.

For vomiting, or pains in the stomach, or headache and giddiness, give also *Ignatia*; and if it fails, *Phosphoric acid*.

In *sleeplessness* after depressing events, sorrow or loss of friends, when night after night passes without any sleep, one dose of *Sulphur* will often give relief.

When *fits* are caused by grief or mortification, give *Ignatia* first; if this does not relieve, give *Opium* during the attack, and the next day, *Phosphoric acid*. See "Spasms."

For grief caused by *disappointment in love* give *Ignatia*, particularly if one cheek frequently turns red, and in a few days, if necessary, *Phosphoric acid*, especially if the patient is very quiet, taciturn, or has a slow fever and at times redness of both cheeks. For disappointed love, with vexation and indignation, take *Staphisagria*.

If much affected by great sympathy with the sickness or other distress of a friend, give *Phosphoric acid*.

For a lasting, old grief, take a dose of *Natrum muriaticum* occasionally.

If the patient is jealous, violent in his motions, quarrelsome or delirious, give *Hyoscyamus*, which may also be given if lovers quarrel much. If he talks much and disconnectedly, changing the subject of his conversation abruptly, talks to every person about his grievances, or is peevish and malicious, feels worse when awaking or after eating, *Lachesis*. When contempt of persons, heretofore esteemed or loved, is shown in acts or words, sometimes with a temptation to kill such persons, *Platinum*.

For grief and *loss of sleep* in consequence of watching at the sick-bed of dear persons, if headache and nervousness follow, give *Cocculus*; if there is great exhaustion, the patient scarcely able to speak, *Phosphoric acid*; if entire sleeplessness, continuing for many nights, *Sulphur*.

When mortifications have produced a *derangement of intellect*, give *Belladonna*, *Hyoscyamus*, *Mercurius*, or *Platinum*, according to the symptoms above stated. If all things appear larger, *Hyoscyamus*; if much smaller, or very little, like playthings, *Platinum*; if dark, black, double, *Belladonna* or *Mercurius*; and if *Mercurius* does not improve any longer, let it be followed by one dose of *Sulphur*.

When caused by *homesickness*, and the patient cannot sleep, is hot and flushed in the face, give *Hyoscyamus*; and if this should not give relief within a few days, especially if the patient has a hot feeling in the back of the throat, *Capsicum*. If followed by a short hacking cough every morning, *Drosera*. If the patient is evidently wasting away, does not wish to speak, the chest feels too weak, is very sleepy and dull, taciturn, irritable, often feels hot in the evening, and sweats much in the morning, does not care to eat, says everything he eats lies heavily and

oppressively in the stomach, tastes what he has eaten a long time, *Phosphoric acid*. When the patient is very weak, trembling, uneasy, agitated, particularly during the night, chilly, perspiring all night, give *Mercurius*.

If grief, fright, anxiety, fear or vexation bring on the *monthly discharge*, or increase or check it, or bring on other symptoms with it, *Platinum*.

For protracted effects of grief and sorrow, when the patient is irritable, cross, uneasy, fearful, dejected, anticipating danger, dreads the future, frets and grieves constantly, is sleepy during the day, but cannot rest at night, perspires night and day, loses the hair, the voice becomes feeble, give *Staphisagria*. If he is contemptuous, refuses to speak, is feverish, and loses flesh, give *Phosphoric acid*. If quarrelsome, obstinate, sensitive, and has occasional attacks of great anxiety, give *Mercurius*.

VEXATION.

Chamomilla generally answers best when the vexation is attended with violent fits of anger.

If vexation causes a bitter taste, retching and vomiting of bile, headache, nausea, oppression at the stomach, cutting pains in the bowels, diarrhœa, hot fever with thirst, redness of the face and eyes, anxiety and uneasiness, bilious fever, or jaundice, give *Chamomilla*. If the patient is cold and chilly, has belching, vomiting, or rising of bitter water, has either constipation or diarrhœa, feels better when at rest, give *Bryonia*; and if it produces no effect, *Veratrum*. In cases of fever with restlessness, dry skin, pressure in the stomach like a stone, *Aconite*.

When food or drink, taken immediately after being vexed, produces bitter taste, bitter eructations, vomiting of bile, pain in the bowels, heat of the head, uneasiness, disturbed sleep, sensitiveness and other complaints, give

Chamomilla once or twice; but if this medicine loses its effect, give *Pulsatilla*, *Nux vomica*, or *Colocynth*.

If a person has drunk chamomile tea, and has afterwards been vexed, or taken improperly chamomile tea for the fever following vexation, give *Coffea*, and if this does not relieve, *Nux vomica*. If, after this, the pains continue, give *Colocynth*. If the patient is of a mild disposition, and *Colocynth* does not effect a perfect cure, give *Pulsatilla*.

If grief or shame is the consequence of vexation, give *Ignatia*. If vexation is followed by coldness or chills, and the patient remains cross, give *Bryonia*; should *Bryonia* not suffice, the patient being one who is inclined to become angry, give *Nux vomica*. If the vexation is accompanied by just and violent indignation, and abhorrence of the occurrence which induced it, if this is expressed by pushing away things on the table with the hands, or throwing away what he has in his hands, give *Staphisagria*. When there is inclination to violent motions or pains in the bowels, especially if they occur, or are increased after meals, *Colocynth* may be given.

Vexation may cause restlessness, want of sleep on account of heat, feeling as if too much blood were in the head, short breathing, palpitation, then give *Aconite*.

For coldness, fear of being alone, fear of dying, want of breath, give *Arsenicum*.

If vexation produces cough, or palpitation of the heart, asthma, spasms in the chest, so that the patient is threatened with suffocation, give *Chamomilla*. In this case it will be well also to put the hands for a short time in cold water; and if this fails, to bathe the arms in water until better. If these symptoms are worse after midnight, give *Arsenicum*; if towards morning, or if the patient seems to lose his reason, *Veratrum*.

ANGER.

When persons of violent temper feel unwell, after having been in a passion, give *Nux vomica*; if the cheeks and face are burning red, perspiration warm, if disposed to be in motion, *Chamomilla*; and if disposed to be quiet, *Bryonia*.

Anger with indignation in persons inclined to much reflection, who complain of soreness all over, are sleepy during the day, and sleepless during the night, *Staphisagria*; if chilly and feverish alternately, with thirst and vomiting of bile, generally worse towards morning, *Nux vomica*.

Internal chill without thirst, with sleepiness, worse in the afternoon and evening, *Pulsatilla*.

If anger and vexation produce mental alienation, fear of death, anxiety, or laughing and crying, *Platinum*. When little children get into so violent a rage as to lose their breath or fall into convulsions, give *Chamomilla*; if they lose their breath, apparently from phlegm in the throat, with rattling, give *Tartar emetic*. If they shriek and weep violently which seems to cause coughing, or if the anger and crying cause palpitation of the heart, and coughing so hard that blood follows, or if there is a bruised sensation, especially in the back, bitter taste, foul breath, and if lying as if stunned by a blow, head hot, feet cold; or if at first very irritable, afterwards indifferent, urine and stool pass involuntarily, give *Arnica*. If they continue to cry and will not be pacified, the blood rushing to the head, they talk confusedly, or are senseless, give *Belladonna*, and if this fails to relieve, *Hepar*.

SENSITIVENESS AND IRRITABILITY

Cause indispositions with many persons, who are too much affected by even trifling emotions. If with this

great sensitiveness there should be inward vexation, sleeplessness, great painfulness of affected parts causing weeping, and a disposition to shed tears at the most trifling and imaginary causes, give *Coffea*. The patient must, of course, abstain from drinking coffee.

Persons with great irritability of the nervous system, particularly the senses, easily startled, anxious, inclined to lie down, averse to fresh air, of a violent, stubborn and refractory disposition, and women, if the menstrual periods appear too soon, are interrupted, stop and appear again, and in this way last too long, should take *Nux vomica*; persons more tranquil, easily moved to tears, the menses too late and insufficient or suppressed, *Pulsatilla*. If this fails and the patient is fretful, give *Ignatia*; if peevish and passionate, *Chamomilla*. If the patients are greatly excited, form plans, and are exceedingly lively, particularly in the evening, give *China*. If the pains are distracting, give *Coffea*; if this fails and there is fever with a full, quick, hard pulse, give *Aconite*; and if this fails to afford relief, *Chamomilla*.

When persons become flighty or distracted from excessive pain, are subject to its recurrence, catch cold from every change of weather, and are worse from being touched, give *China*, and should this prove ineffectual within several hours, *Mercurius*. If violent pains bring on delirium, give *Veratrum*.

If different mental emotions or mental exertion cause headache, faintness, or determination of blood to the head, take *Glonoine*; but if great weakness and fatigue or depression and uneasiness remain, particularly after night-watching, take *Cuprum*.

If any slight mental exertion, reading, studying or thinking causes complaints, particularly in persons of sedentary habits, give *Nux vomica*; if this does not avail, *Lachesis*.

If occurring after night-watching or oft interrupted

sleep, and all symptoms are aggravated by eating, drinking, and after sleep, particularly in nervous persons, give *Cocculus*.

CHAPTER II.

CONSEQUENCES OF COLD.

THE most common results of taking cold are catarrh and cough, sometimes fever, colic, diarrhœa, pains in the teeth, ears or limbs. When selecting a medicine, it may be necessary to refer to the chapter where these disorders are more fully treated. Here we shall only mention what is to be done in the most common cases.

The first rule to be observed, in order to prevent bad effects from catching cold, is to keep warm, and see that the feet are kept dry; to abstain from the use of spirituous liquors, which in some cases may aggravate the complaint; and eat less animal food and no spices.

When you feel that you have caught cold, without any decided consequences having yet manifested themselves, after having been in a cold, dry wind, take *Aconite*, drink a large tumbler of cold water before going to bed, cover yourself well and try to perspire.

If children cannot be induced to drink water, or if you know from experience that it does not produce perspiration, water and milk in equal proportion, taken very warm, may cause perspiration.

To a person, who in winter has become stiff with cold and wet, give a cup of strong coffee, without milk. If this should prevent sleep at night, *Nux vomica*.

If children have been out in the snow, snow-balling, skating, or playing out-doors in winter, have perspired, perhaps gotten their feet wet and taken cold, headache following, give *Glonoine*, especially if the head is hot, face red, pulse very quick, eyes red, and the arteries of the neck throbbing; also if they hold their head, or want to

have the forehead pressed, say the head is too large, or begin to rave. Afterwards it may be necessary to give *Belladonna* or *Bryonia*.

When perspiration has been checked by taking cold and is followed by headache, earache, toothache, or pain in the bowels, give *Chamomilla*; by pain in the ears alone, *Rhus tox*.

To women in confinement, if they complain of headache, especially on the right side, occasioned by a draught of cold air, or of pain in the nape of the neck, in consequence of sitting up and being uncovered, give *Belladonna*; if the pain extends to the shoulders, being partly brought on by holding the child, *Rhus tox*. will remove it; if the pain is more on the left side, is throbbing and shooting, and effects the lower jaw, the arms and the chest, and is worse from motion, *Bryonia* will afford relief; but if mostly confined to the temple, the eye, the upper jaw, or to the chest in the region of the heart, *Spigelia* should be given.

When a person, while perspiring freely, gets drenched by a shower of rain, give *Rhus tox*. Should no relief be experienced, and if the patient has previously over-exerted himself, give *Bryonia*. See "Overheating."

When in the latter part of the summer a sudden change takes place in the weather from hot to cold, and almost every one complains of having taken cold, give *Belladonna*; but if the cold, wet weather continues for a long time, *Nux moschata*, particularly to children, women and men, who are easily affected.

After having the hair cut, persons, particularly children, very often have symptoms of a cold, which are relieved by taking *Belladonna*.

For cold in the head, from *wet feet*, give *Cepa*; for cough and pain in the limbs, *Rhus tox*.

For suppressed *perspiration of the feet*, give *Silicea*.

CATARRH, OR COLD IN THE NOSE.—If catarrh results

from a cold, and the patient can neither smell nor taste, give *Pulsatilla*.

For catarrh, with heat in the eyes and head, soreness of the nose, give *Belladonna*. If the nose is stopped up, *Nux vomica* or *Ipecacuanha*.

If north-east wind, blowing from the sea, causes a running cold in the head, worse in the evening and in-doors, better in the open air, with headache, running of the eyes and fever, take *Cepa*.

If a catarrh has been checked by fresh exposure to cold, particularly if the patient is worse in the afternoon, or is dejected and fretful, give *Pulsatilla*; if he is worse at night or towards morning, or very cross, sensitive, and excited, *China*.

If a catarrh appears after an eruption has been checked, give *Ipecacuanha*, and if that does not avail, *Cuprum*. In some cases, *Bryonia*, *Pulsatilla*, *Sulphur*, or *Nux moschata* may be given, according to the symptoms. If the recovery from catarrh has been impeded by a fresh cold, attended with pain over the eyes, worse on the right side, the face flushed, *Belladonna*, if the pain is worse on the left side and the face pale, *Spigelia*.

COUGH—When catarrh is accompanied by cough, or when a dry cough remains after the first symptoms have disappeared under the action of other medicines, give *Nux vomica*. If the cough is dry and excites retching or vomiting, *Ipecacuanha*; if it is hollow and causes vomiting, *Carbo vegetabilis*; if accompanied with tough expectoration, particularly with children in winter, *Chamomilla*; if it is moist or loose, *Ferrum phosph.* or *Pulsatilla* (see "Cough," in Part II); if the cough returns with every blast of cold air, give *Phosphoric acid*, if it returns every time that a foot or arm is exposed when in bed, and is hollow and fatiguing, give *Hepar*; if the cough becomes worse after going to bed, is always worse when getting warm in bed, *Nux moschata*.

When the cough is caused by cold air, is dry and convulsive, with vomiting, or the expectoration is spotted or streaked with blood, if accompanied by a stitch in the side, or by headache, pain under the ribs, or if the cough is caused by a tickling in the throat, and the chest feels sore after it, and the pulse is hard and quick, give *Bryonia*; but when the pulse is not very hard, if the soreness continues or is felt during the cough, not stitches but more burning sensation in the chest, oppression and palpitation, give *Carbo vegetabilis*.

DIFFICULTY OF BREATHING.—When, after taking cold, the patient appears as if suffocating, give *Ipecacuanha*. If not relieved by this, *Arsenicum*. Sometimes other remedies prescribed for asthma are preferable, viz., *Nux vomica*, *Cuprum* or *Sambucus*. See “Asthma” and “Croup.”

p 224

p 216

DIARRHŒA.—When immediately after taking cold *diarrhœa* appears, give *Opium*. If this does no good, or if the *diarrhœa* does not appear for a day or so afterwards, and is attended with pain in the bowels, or other symptoms, give *Dulcamara*.

In *diarrhœa* without pain, and commencing during the day, or if worse in the day-time and better at night, give *Ferrum*; worse after midnight or towards morning, *Phosphoric acid*; if produced by eating ice-cream, or drinking ice-water, compare Part I, Chapter IV.

If, during warm weather, *diarrhœa* is caused by taking cold while in perspiration or by cold bathing, with heat in the head, slight pain in the bowels; or if the pit of the stomach and the abdomen are sensitive to pressure, or the stools contain undigested food, *Bryonia*.

If discharges of undigested food follow the drinking of bad water, and *Bryonia* proves ineffectual, give *China*.

For *diarrhœa*, with flatulency, cutting pains about the navel during the evacuation, straining and great weak-

ness at the same time, discharges of mucus and blood, or if the patient has drunk spirituous liquors, give *Nux*.

If there is much blood and mucus discharged, give the remedies recommended for dysentery. If tedious, but not violent, especially if worse in the morning, *Sulphur*.

PAIN IN THE BOWELS.—If the pain is violent, spasmodic, pressing, particularly before evacuations, if the latter are acrid, thin, brownish, and produce burning in the rectum, give *China*.

For cramp-like pains under the ribs, moving from right to left, diarrhoea which prostrates completely, chilliness, white coated tongue, bad smell from the mouth, headache in the morning, dullness and sleepiness the rest of the day, give *Nux moschata*.

If the pains are violent, tearing and twisting as if the intestines were in motion, if the patient cannot be quiet, but runs about; if it appears as if a large ball were in the side, or as if the whole abdomen were hollow, with nausea and vomiting, the diarrhoea watery, slimy or greenish, with a smell like bad eggs, give *Chamomilla*.

For diarrhoea from exposure to the night air, greenish and watery, with much pressure before the discharge, a disposition to faint, pains in the lower abdomen, pressing in the upper, cutting with a constant uneasy sensation, as if to evacuate, rumbling in the belly, griping in the pit of the stomach, tearing pains in the abdomen, which feels cold to the hands, with nausea, shivering and chills, give *Mercurius*.

If partly caused by a disordered stomach, after eating pork, rich pastry and the like, worse in the afternoon, particularly in the evening, or during the night, if the wind rolls about in the stomach, or if the belly is sensitive to pressure, give *Pulsatilla*. The same to pregnant women, when the pains resemble labor-pains.

If a cold is followed by pain with a disposition to cry, great sensitiveness and sleeplessness, *Coffea*.

When the pains are so violent as to drive the patient almost mad, give *Chamomilla*; if the pains are always worse in the open and cold air, but better in warm air, and the patient is very changeable, give *Nux moschata*.

FOR HEADACHE, from cold, with rush of blood to the head, increased by walking or going up stairs, at every step, increased by a draught or in the open air, with a feeling as if the head would burst, give *Belladonna*.

If the headache is more a pressure on single spots, with roaring in the ears, or difficult hearing, give *Dulcamara*; if it feels as if the brain was loose, and as if it struck against the skull when shaking the head; headache after breakfast, or worse after meals, with giddiness, sleepiness and dullness, give *Nux moschata*.

If caused by a draught of air, and merely external, give *Nux vomica*; if internal, *Belladonna*. If caused by bathing, and *Belladonna* does not cure, if accompanied by nausea, giddiness, disordered stomach, worse when smoking, give *Antimonium crudum*, or, according to the symptoms, *Bryonia*.

AFFECTIONS OF THE EYES.—Compare what is recommended for “Diseases of the Eyes.” *Dulcamara* will often relieve. For much pain, heat, inflammation, acrid tears, and inability to bear the light, give *Belladonna*, and if this does not cure, *Mercurius*; if this fails, *Hepar*.

In dimness of vision, so that the patient is unable to read, and sees sparks before the eyes, or when the eyes are affected after every cold, give *Dulcamara*, and afterwards *Sulphur*; should this fail, give *Calcarea*.

AFFECTIONS OF THE EARS.—Constant buzzing in the ears and difficult hearing indicate *Dulcamara*; if they re-

turn after a while and this does not again relieve, give *Sulphur*.

Tearing pain externally, shooting internally, the ear dry, with peevish disposition, indicate *Chamomilla*. Tearing, shooting, aching pains, *Nux vomica*; great disposition to cry, the ear moist or running, or hot and red, and tearing-twitching pains sometimes also in the face, *Pulsatilla*; when it tears and shoots, with much buzzing, the ear not so hot and red, but excoriated by matter, or if blood is discharged, the glands around the ears or of the throat are swelled, give *Mercurius*; and if the heat, redness and itching remain, if there is shooting when blowing the nose, or buzzing and throbbing, give *Hepar*. Earache of children from a cold is relieved by *Pulsatilla*; if it fails, give *Dulcamara*, or *Rhus tox*.

If a discharge with buzzing and burning in the ears remains, give *Sulphur*.

TOOTHACHE.—Toothache from cold usually yields to *Chamomilla*, *Rhus tox*. or *Nux moschata*. See "Toothache," Part II. Patients subject to toothache whenever they take cold, should take a dose of *China* or *Mercurius*, and afterwards, *Sulphur*.

SORE THROAT.—Affections of the throat from cold will in most cases yield to *Belladonna*, *Dulcamara*, *Mercurius*, or *Sulphur*. See Part II.

When caused by drinking very cold water, *Belladonna* is to be preferred; when the cold is general, *Dulcamara*. When the throat is constantly dry and hot, with frequent efforts at swallowing, much saliva in the mouth, or the tonsils are swollen; if speaking and swallowing cause shooting pains; if the patient hawks much, swallows with difficulty, is in dread of suffocation, the throat seems too narrow, what he drinks comes back through the nose, if he is very hasty, give *Belladonna*; and if this affords

no relief, *Sulphur*. When the pains are less violent, the tongue appears paralyzed, there is much perspiration, sometimes offensive, without giving any relief, the patient is quarrelsome, give *Dulcamara*; if this fails, *Mercurius*, or one of the other remedies prescribed under "Sore Throat," in Part II.

NAUSEA AND VOMITING.—When these symptoms appear after a cold, particularly when a rash or other eruption has been suppressed, the best remedy is *Ipecacuanha*. If it does not answer, and the vomiting is sour or bitter, with frequent empty eructations, give *Belladonna*; if nothing but tough phlegm is thrown up, *Dulcamara*; if worse after exercise, eating, speaking, or when riding, or after sleep, *Cocculus*. If it returns from every motion of the body, and the patient is, notwithstanding, unable to keep quiet, very weak, thirsty, but every drink makes him worse, give *Arsenicum*. For spasms, with nausea, *Cuprum*. After eating cold fruit or drinking ice-water, *Carbo vegetabilis*. See Chapter IV.

PAINS IN THE LIMBS.—When the parts affected feel uneasy, so as to require constant change of position, every thing feeling as if too hard to rest upon, and the limbs as if benumbed or strained, worse when stepping or from the slightest jar, the patient complains even when a person walks across the room, calls loudly, approaches him, or moves his hand, give *Arnica*. But if the pains are attended with fever, *Aconite*, until the fever abates; and then, after several hours, *Arnica*. Should these not be sufficient refer to "Rheumatism," Part II.

If the pains are worse when at rest, and at night, with lameness or coldness of the limbs, with pale swelling or burning in the feet, or with redness and swelling of the big toe, with a stiff neck, the skin very dry, or offensive perspiration without relief, give *Dulcamara* or *Mercurius*.

If the same symptoms return after every cold, with uneasiness at the approach of other persons, or when attempting to swallow; worse when at rest, better when in motion with swelling and rending, burning and throbbing pains in great toe, give *Phosphoric acid*.

For swelling of the knees, lumps on the joints of the hands and fingers, give *Sulphur*, and later, *Calcarea*.

When taking cold causes fever, particularly if there is restlessness, thirst and a dry skin give *Aconite*. If, after two or three doses, the fever still increases, select one of the following: *Nux vomica* or *Chamomilla*; *Belladonna* or *Dulcamara*; *Ignatia* or *Pulsatilla*.

For fever after taking cold accompanied by vexation or other emotions, or if a change of diet has disagreed, if the patient was at first chilly, or chills and heat alternate, take *Nux vomica*. To children or those made very restless by the fever, give *Aconite*; if very cross and irritable, *Chamomilla*.

In general, the following medicines answer best in complaints from cold; in acute and inflammatory affections, *Ferrum phosphoricum*, *Aconitum*, *Chamomilla*, *Rhus tox.*, *Nux vomica*, *Pulsatilla*, *Belladonna*, *Colocynthis*. When less violent, *Dulcamara* or *Ipecacuanha*. When tedious and often returning, and the patient has formerly taken too much mercury, *Carbo vegetabilis*, *Sulphur* or *China*. If these do not relieve, *Silicea* or *Hepar*. If these affections result from bathing, *Bryonia*, *Antimonium crudum*, *Sulphur*, or *Nux moschata*, and after a few weeks, *Carbo vegetabilis* or *Calcarea*. When the patient cannot perspire, *Chamomilla* or *China*, *Arsenicum* or *Silicea*. When the perspiration is too copious, *Mercurius*, *Phosphoric acid*, *Carbo vegetabilis*, *Sulphur* or *Hepar*.

When a person takes cold very easily, he should abstain from the use of coffee and spirituous liquors; use more cold drinks than warm; wash himself frequently in cold water, and accustom himself more and more to the air in every kind of weather; this custom will gradually diminish the disposition to take cold, and finally remove it entirely, particularly if the patient takes some of the following medicines: *Coffea*, *Belladonna*, *Nux moschata*, *Nux vomica*, *China*, *Dulcamara*; or *Silicea*, *Carbo vegetabilis*, *Calcarea*. The latter three must not be taken too frequently, but only at long intervals.

If one is much afraid of the cold air, yet feels worse in the warm room, give *Apis*; if he has a great desire to go out, but takes cold every time he does so, *Cepa*.

If, after using the means recommended above, there should still remain the same susceptibility, and the patient be chilled by every draught of cold air, let him take *Nux vomica* or *Chamomilla*. If exposure to cold produces pain, *Arsenicum*. If the patient is apt to get his fingers, nose, etc., frosted and he is not taking other medicines, let him rub the parts with spirits of camphor before exposure to the cold. If the patient has chilblains, let him take the remedies prescribed under "Chilblains;" if affected by every blast of cold air, *Bryonia* or *Rhus tox.*, *Nux moschata*, *Veratrum* or *Mercurius*, and if they do not answer, *Carbo vegetabilis* or *Calcarea*, according to circumstances. If he cannot bear the wind, *Carbo vegetabilis*; if not a draught, *China*, *Belladonna*, *Sulphur*, *Silicea* or *Calcarea*, one after the other, at long intervals. If wet, cold stormy weather disagrees and he is benefited by external warmth, *Nux moschata*; if aggravated by warmth, *Mercurius*. When the night air only is injurious, *Mercurius* will prove beneficial, and after several days have elapsed, *Sulphur*; to be followed, if necessary, by *Carbo vegetabilis*. If a person feels ill in damp weather, give *Dulcamara*, *Nux moschata*, *Rhus tox.*, or *Veratrum*, and later *Carbo vegetabilis* or *Calcarea*. If the dampness affects the chest, *Dulcamara* or *Carbo vegetabilis*.

One who is affected by a thunder-storm, should take *Bryonia* during the storm, and later *Silicea*. *Phosphorus* and *Sulphur* are also recommended.

For excessive fear during a thunder-storm, *Gelsemium*; if this fails, give *Glonoine*.

If every change of weather aggravates the complaint, give first *Mercurius*, *Rheum* or *Rhus tox*; later, *Sulphur* or *Silicea*.

If a change from warm to cold affects most injuriously, give *Dulcamara* or *Rhus tox*; if from cold to warm, *Carbo vegetabilis* or *Lachesis*. If dampness affects most, *Nux moschata*.

For colds occurring in the spring, the remedies most often indicated are, *Veratrum*, *Rhus tox.* and *Carbo vegetabilis*; in summer, *Belladonna*, *Bryonia*, *Antimonium crudum* and *Carbo vegetabilis*; in autumn, *Veratrum*, *Mercurius* and *Rhus tox.*; in winter, during dry weather, *Aconitum* or *Belladonna*, *Bryonia*, *Nux vomica*, *Chamomilla* or *Sulphur*; sometimes *Ipecacuanha*; but during damp weather, *Dulcamara*, *Nux moschata*, *Veratrum* or *Carbo vegetabilis*.

It is, however, necessary to examine closely under the heads of the different complaints, as these general remarks are merely intended to guide the patient to the remedy to be preferred in doubtful cases.

After cutting the hair bad results often follow, particularly with children, which are attributed to cold; for sudden faintness, twitching or convulsions, congestion, heat of the head, redness of the face, or fear with mistrust or anxiety, give *Glonoine*; for fear with inclination to weep or run away, *Belladonna*; to children, while cutting teeth, *Chamomilla*. For headache, *Belladonna*, *Bryonia*, *Glonoine*, or *Pulsatilla*, according to the symptoms.

CHAPTER III.

CONSEQUENCES OF OVERHEATING, IM-
MODERATE EXERTION, AND GREAT
EXHAUSTION.

AFTER immoderate exertion, great relief will be felt from taking a warm Turkish bath, if that can be procured. If the limbs are painful, or burn, they will be relieved by rubbing with the bare hand or a soft flannel. Kneading and rubbing the muscles of the back and limbs afford great relief.

OVERHEATING.

When you have overheated yourself with work in summer, it is well to take a few drops of good whiskey or brandy on sugar, or a small quantity of strong wine, and refrain from drinking cold water till your breath has the normal temperature. If you are much fatigued, it is advisable to take a cup of tea.

SUN-STROKE.—During the hot weather of summer, adults as well as children, who work hard or exercise too freely in the hot air, are sometimes so much affected by the heat, that they fall down suddenly as if struck by apoplexy, or first stagger, try to support themselves and then sink down. In such cases give *Glonoine*, particularly if the following symptoms are present: eyes fixed, without expression, glassy; pupils contracted; pulse scarcely perceptible, or so quick that it can hardly be counted; loss of speech or at least disinclination to speak; sometimes

retching, face pale, white or yellowish-red; cold sweat; body cold; head hot to the touch, particularly when the hand remains long on the head.

In all cases of sun-stroke, with heat of the head internally as well as externally, warm water should be used, either by applying to the head a wet cloth, or by pouring the water upon the head.

Application of ice is senseless, and blood-letting murderous. In some cases of sun-stroke, when the heat is not only about the head, but also over the whole body; the pupils small, color of the face changing; pulse large, hard and full; when the patient shows now and then signs of distress and anxiety by different movements, as starting, putting the hands to the head, grinding of the teeth, rolling of the eyes, etc., give *Aconitum* in water.

Belladonna must be given at once in cases with the following symptoms: eyes fixed, half open, or turned upwards; pupils large, or very small, or of indifferent size; face red; head and whole body hot; involuntary escape of urine and fæces; pulse full and hard; occasional twitching or trembling of the limbs; putting of the hands to the head; bending backwards of the head; heavy sleep.

To habitual drunkards, or if you smell that liquor has been drunk shortly before, it is better to give *Nux vomica*; if this does not relieve, *Arsenicum*.

Similar symptoms may be caused by exposure of the bare head or nape of the neck to the rays of the sun, by sleeping in the sun, or falling asleep near a stove, or before a grate. The same remedies, or one of the following, will be required according to the kind of headache.

HEADACHE FROM HEAT.—For fullness, as if the head were pressed asunder, worse when stooping, particularly in the forehead as if the contents would drop out, increased by walking, stepping and every motion, combined with hot fever, thirst, vomiting and sleeplessness, give *Belladonna* or *Bryonia*. If combined with anxiety, uneasiness,

rage or great irritability, despondency, starting, fear of present objects, lamentation, weeping, etc., give *Belladonna*.

If the patient is very weak and peevish in the morning, cannot bear the pressure of his clothing, is more passionate and cross than plaintive and desponding, and apprehensive of future evil, give *Bryonia*.

If overheating always causes headache, especially if there be heaviness, throbbing and pressure over the eyes, and pains in the eyes, when using them, give *Carbo vegetabilis*.

When headache is caused by heat or great exertion, while exposed to the sun in summer, or by getting too warm before the fire, or by ironing; when the head feels too full, and there exists a want of appetite, particularly in the morning, with much thirst, fever, trembling, nausea and vomiting, or diarrhœa, give *Bryonia*.

When the head feels too full, with the sensation of a pulsating-rising, which threatens to burst the head, give *Glonoïne*.

DIARRHŒA.—In diarrhœa accompanied by fever, caused by excessive heat in summer; and also in colicky pains occasioned by drinking milk, give *Bryonia*. To a person who cannot bear the heat of summer, or cannot work in the heat, particularly when troubled with night-sweats, who is very sleepy, or suffers from complaints in the stomach and abdomen, and *Bryonia* does not answer, give *Antimonium crudum*. If nausea, which is caused by the heat, returns constantly, the remedies prescribed give but temporary relief, give *Silicea*.

FATIGUE.

The *fatigue* after walking a great distance, or after much labor, particularly in summer, is frequently so great that rest does not relieve, but, on the contrary, seems to increase it. If possible let the sufferer take a warm, or still better a Turkish bath; if that be impracticable, let him put his feet into warm water, into which a handful of salt has been thrown. If this

does not relieve, give *Rhus tox.* A cup of tea, not too strong, is also to be recommended.

In fatigue, with great debility, or after any great exertion, producing great exhaustion, *Arsenicum* will give relief.

If the exertion was accompanied by much lifting and stretching, or if it caused perspiration, and the body has been cooled too quickly by cold air or water, give *Rhus tox.*; particularly if the joints pain much.

Should fatigue produce a sensation of faintness, or actual fainting, or if the patient suffered great fear before or during the exertion, give *Veratrum*; if this does not relieve, give *Gelsemium*; if no food had been taken for a long time, *Coffea*. For great weakness, in consequence of profuse perspiration, or if the patient was previously debilitated or had night-sweats, give *China*. If there are symptoms of internal heat, such as hot breath and quick pulse, give *Aconite*, and if not relieved by this, *Bryonia*. If the accelerated circulation continues for several days, and the slightest exertion produces a tendency of blood to the head or chest, or if the face is flushed, give *Mercurius*. For soreness in all the limbs, particularly in the muscles, a feeling as if bruised, *Arnica* is the best remedy.

If after fatigue, particularly with people otherwise easily affected, or such as cannot bear the cold air, there appear weakness, pain in all parts on which they lie, particularly pain in the temples; a dull, sleepy disposition, they cannot recollect; are sleepy without getting relief from sleep; some are afraid of going to sleep, on account of the beating in the head, *Nux moschata* will give relief. •

If the feet have become sore from walking, take *Arnica* internally and apply the tincture externally; if they are blistered, *Arnica* will do no good; if the walk must be continued, apply tallow or suet; in the evening take *Cepa*, and apply a wet cloth.

If the fatigue is so great that it causes internal pains and restlessness; if sleep does not refresh; every part pains at the slightest touch; sitting and standing weaken very much; walking about relieves a little; the beating of the pulse is felt all over the body, give *Natrum muriaticum*. If every exertion or motion causes a prickling sensation in different parts of the body, *Apis*; if it remains or returns again and again, give *Hepar*.

If the limbs are painful after carrying or lifting, particularly during rest or when moving a little, and better from continued motion, give *Rhus tox.*; when there are shooting pains in the small of the back, especially if worse from moving and not relieved by continued motion, give *Bryonia*; if it is impossible to move the back, on account of excessive pain, give *Sulphur*. See "Overlifting."

If a person, who is otherwise in good health, feels tired after the least exertion, even from talking, or if he has lost much sleep, give *Cocculus*; but if talking makes him so tired in the throat, that it pains, *Apis*; and if this does not relieve, *Veratrum*; if this fails also, give *Calcarea*.

When walking briskly causes loss of breath, or coughing, stitches in the side or pain in limbs, give *Aconite*; if the stitches in the side continue, give *Arnica*; if this does not afford any relief, *Bryonia*.

If every quick motion causes an almost suffocating shortness of breath, with perspiration about the neck, *Sambucus* will give relief.

If the shortness of breath continues, or becomes worse, by walking briskly, running, or ascending, attended with coughing and raising of phlegm, give *Silicea*.

When riding in a carriage causes nausea, give *Cocculus*. If it causes headache, particularly if worse after riding, give *Sepia*. Compare article on "Seasickness."

SITTING UP AT NIGHT

Is always debilitating, yet every one should be able to bear it in case of need. If it produces greater weakness than usual, if persons cannot deprive themselves of a few hour's sleep, give *Cocculus* or *Phosphoric acid*. If sitting up occasions headache, or if a person has taken much coffee, wine or spirituous liquors to keep himself awake, give *Nux vomica*; if the headache is not caused by spirituous liquors, and the patient is unable to lie down, or has nausea, give *Ipecacuanha*. If the head is worse at night, but a little better in the morning, especially to mild tempered women, give *Pulsatilla*. If there is determination of blood to the head, heaviness, as if intoxicated, worse when moving the eyes, with buzzing in forehead, pale, haggard face, heaviness in the forehead, hardly able to hold up the head, with nausea, chilliness, weakness and peevishness, give *Nux vomica*; particularly if the patient is of a passionate and energetic disposition.

If the head feels empty and light, or heavy; bright light is unbearable; better in the open air, worse when lying down; particularly to mild, yielding persons, give *Pulsatilla*.

When the head trembles, is light, there are flushes of heat in the face, blue circles around the eyes, the mouth perfectly dry without thirst, loathing of food, belching, attacks of nausea with faintness, fullness of the stomach, oppressed breathing, if worse in the air, from speaking or drinking coffee, if the patient is very sad and often startled in sleep and has frightful dreams, give *Cocculus*. If greatly excited in the evening, does not sleep well, is weary when rising, *China*; if complaining of feeling sore all over, *Arnica*.

In the worst cases, when body and soul appear worn out by want of sleep and great exertion, when despondent,

and there is a sensation of heat deep in the head, give *Cuprum*. See "Mental Exertion."

The effects of late hours and late suppers may be counteracted by *Pulsatilla* or *Nux vomica*, according to the above indications, or by *Lachesis* or *Carbo vegetabilis*. See "Consequences of Intoxication."

CONFINEMENT AND EXCESSIVE MENTAL APPLICATION.

Excessive mental application is always injurious. Everyone should daily exercise in the open air for at least one or more hours. If close confinement has produced abdominal symptoms, and if the patient has been accustomed to coffee or spirituous liquors, *Nux vomica*, taken in the evening, will often have a good effect; if after several days, the symptoms return, give *Sulphur*. When the head feels heavy and dull, *Nux vomica* is a good remedy; if there is congestion to the head, dizziness, throbbing of the arteries in the neck, indicating brain fever, give *Belladonna*. See "Headache." If these medicines prove ineffectual, and if every exertion of the mind causes headache, give *Calcarea* or *Lachesis*. If there is merely a sensation of giddiness, as if drunken, give to passionate people, *Nux vomica*; to mild, lachrymose subjects, *Pulsatilla*. Toothache, cough, fainting, and other complaints caused by mental application, often yield to *Nux vomica*.

EXCESSES

Injure body and mind more than anything else. If they consist in intemperance in eating or drinking, apply the remedies prescribed under "Disordered stomach." But if they are such as waste the very marrow and essence* of the constitution, the greatest abstemiousness is a most absolute condition.

The principal remedy, and the one which should be given first, but which may be given repeatedly after other remedies, is *China*. Afterwards, and particularly if the patient bitterly regrets his vicious conduct, give *Phosphoric acid*. Look also under the head of the special complaint of the patient, and select in preference such remedies as *China*, *Phosphoric acid*, *Staphisagria*, *Nux vomica*, *Sulphur* or *Dulcamara*, whichever may seem to suit best.

The same treatment is recommended when the patient has lost his strength by self-abuse; give in the beginning *China*, *Staphisagria*, or *Nux vomica*; later *Phosphoric acid*, *Sulphur* or *Calcareæ*.

The patient should be persuaded to leave off his bad habits, and encouraged to constant occupation, even hard work; he should eat sparingly, take little sleep, abstain from all spirituous liquors, avoid bad company, and abstain from reading books calculated to excite the passions.

Should a morbid irritation trouble the patient, which is often the case with children, select one of the following medicines: *China*, *Mercurius*, *Carbo vegetabilis*, *Nux vomica*, *Pulsatilla*, *Staphisagria* or *Antimonium crudum*, *Silicea*, *Platinum*, *Calcareæ*, *Sepia* or *Cocculus*. Frequently, when *China* and *Carbo vegetabilis* are insufficient, *Mercurius* will effect more; if not, *Sulphur*. These remedies must not be repeated often; *Coffea*, *Opium*, *Aconite*, *Ignatia* may be given intermediately according to circumstances.

All those who have become so much debilitated by excesses, that they are easily affected by every little current of air, or cold wet weather, prefer remaining in-doors, or are very peevish and fickle, will be relieved by *Nux moschata*.

If these vices have so weakened the constitution, that the effects appear even after marriage, although then living moderately, give, if the head is much affected, *Calcareæ*. For great weakness and trembling of the legs, the same; for asthma, *Staphisagria*; burning in the parts, *Mercurius* or *Carbo vegetabilis*. Weakness in the feet, heaviness, and a feeling of soreness in the limbs, dullness, ill-humor and lassitude, may be remedied by *Cocculus*.

A good homœopathic physician will restore all such cases. Never consult a quack who professes to make a specialty of treating these complaints with secret medicines. If such remedies were of any use, the discoverer would be more successful by introducing them to the notice of physicians. Great harm is often done by the use of patent medicines, and your complaint will be the harder to cure because your physician must remain in the dark as to the nature of the drug with which you have been dosed.

LOSS OF BLOOD AND OTHER FLUIDS.

Loss of fluids by excessive perspiration or purging, or long continued diarrhœa, too long suckling of children, too great a flow of milk, too copious and long standing monthly discharge, blood-letting by the lancet, or loss of blood by other means, often occasion great weakness, accompanied by other symptoms; dizziness, headache, palpitations, etc. In all such cases give *China*. If any of the above causes, particularly improper bleeding, should produce fainting or convulsions, immediately give *China*, and do nothing else; as soon as the sick person recovers, if his mouth is very dry, or if he moves the tongue, give him a little cold water; if he faints again, or has spasms, or if he does not recover entirely, give him a teaspoonful of good old wine; after a while repeat, if necessary, the *China*, and later, the wine. After this, give him as much cold water as he wishes to drink, but not too much at once. Should any symptoms remain which are not relieved by *China*, give *Phosphoric acid*; should this fail, *Nuxvomica*, and later, *Arsenicum* or *Sulphur*. Compare article on "Piles and Hemorrhage."

CHAPTER IV.

CONSEQUENCES OF SURFEITING.

DISORDERED STOMACH.

When a person has eaten too much, or partaken of any thing heavy, and soon after feels that his stomach is out of order, let him take a cup of strong coffee without milk; should headache or other complaints follow, particularly

pressure in pit of the stomach, oppression, nausea, or in children trembling and coldness, give *Pulsatilla* in water every half hour until relieved. If the patient retches constantly and looks pale, give *Ipecacuanha*; if the retching is accompanied by heat, particularly in the head, the patient tosses about anxious and distressed, *Aconite*. Chilliness indicates *Pulsatilla*; great coldness with violent pains in the stomach, *Veratrum*. If there remains headache, pressure and heaviness in the stomach, and qualmishness, give *Chamomilla*; if this fails, *Nux vomica*.

If there is no improvement felt on the following morning and loathing, nausea, inclination to vomit, still continue, if there are risings with a bad mouldy taste and smell, resembling the smell of the food that has been taken, give *Antimonium crudum*; if there is rising with a bitter taste, *Bryonia*; or when putrid, *Nux vomica*; if like rotten eggs, *Arnica*; if greasy, *Pulsatilla*; and if acrid and bitter, *Arsenicum*. The patient ought to take no nourishment but gruel, barley water, tea and toast, and lastly thin broth, for two or three days, to give the stomach time to recover its functions.

A disordered stomach produced by eating pork, or other fat meat, pastry, rancid butter, etc., will be relieved by *Pulsatilla*. If this does not suffice, try *Carbo vegetabilis*.

For complaints after eating pastry, fresh bread or cake while warm; the patient groans and feels oppressed as if his stomach would burst, give *Belladonna*.

A disordered stomach from other food, risings with a taste of what has been eaten, nausea, inclination to vomit, will yield to *Antimonium crudum* or *Pulsatilla*.

For a disordered stomach from eating fruit, *Arsenicum* or *Pulsatilla*; nausea and belching, dry mouth, without thirst, *Pulsatilla*; much vomiting, constant desire to drink a little at a time, *Arsenicum*; to persons in the habit of drinking beer or malt liquors, *Pulsatilla*; spirituous liquors, *Arsenicum*; children of a mild, yielding, timid, tearful dis-

position, afraid of strangers, *Pulsatilla*; obstinate children who are easily offended and become enraged, and are afraid of being alone, *Arsenicum*; constantly asking for different things, *Bryonia* or *Pulsatilla*; if not inclined to give any thing to others, or if cross for being looked at, *Arsenicum*. Compare "Diarrhoea."

For bad effects from eating ice-cream, take *Arsenicum*; from drinking ice water, or a variety of mild drinks, *Carbo vegetabilis*.

For disordered stomach from bad, sour wine, particularly with much nausea, *Antimonium crudum*; from wine containing sulphur, *Pulsatilla*; from sour beer or vinegar, *Aconite*, particularly when there is a pressing pain in the stomach, nausea, inclination to vomit, and vomiting of phlegm or blood; if the vomiting is sour, with burning in the throat, cutting pain in the bowels and purging, *Hepar*. For vomiting of food, burning in the stomach and abdomen, cutting pain in the bowels, with coldness, agitation and thirst, *Arsenicum*; if connected with great debility and sensitiveness to warm and cold, or damp and dry weather, *Carbo vegetabilis*.

For disordered stomach, from stale fish or meat, give forthwith a small quantity of pulverized charcoal, and if this does not remove all the unpleasant symptoms, *China*; if there is a foul rising, and putrid taste, give *Pulsatilla*.

For disordered stomach from salt victuals, *Carbo vegetabilis*. Long-lasting, bad effects from eating too much salt may be removed by an occasional dose of *Phosphorus*. For disordered stomach from eating cabbage, especially sour crout, give *Bryonia*. Complaints after eating very hot food, *Causticum*.

For directions to remove the symptoms from eating old cheese, sausages, spoiled smoked beef, etc.,—see article on "Poisoning."

OVERFEEDING OF CHILDREN.—Children are not unfre-

quently made ill by overfeeding, or by giving them indigestible food, such as pap made of flour, crackers, bread not sufficiently baked, and the like; especially when they are rocked too much, and are, moreover, dosed with rhubarb, salts, castor oil, etc. All these things should be avoided. To check vomiting, give *Ipecacuanha*, particularly if the vomiting is accompanied by purging. If this does not soon relieve, give *Pulsatilla*. If there is purging, with discharge of undigested food, and if the child was already debilitated by aperients or long continued diarrhœa, *China*. If vomiting is accompanied by constipation, *Nux vomica*.

Very young children suffer more often from overfeeding than from starvation. Anxious mothers and nurses should reflect that babies' stomachs are not adapted for large quantities. They should receive nourishment often and little at a time. Once in two or three hours is often enough. The quantity should be regulated according to the condition and strength of the child.

The same kind of diet should not be persevered in too long; a variety of things should be tried and that which seems most palatable to the child, if it is a wholesome article, made the chief article of diet. Milk should be brought to the boiling point, then allowed to stand till it cools, and the scum that forms on the top carefully removed; never allow milk to boil for any length of time, boiling makes it indigestible. Thin gruel agrees better with some. If a more substantial fare is required they should have grits, made of wheat, in preference to pap made of flour. Or fill a linen bag with wheat-flour as tightly as possible, then tie it up well and keep it in boiling water for three hours. After that take it out and let it get cold. Upon removing the bag, you will obtain a hard mass, from which the outer crust must be peeled off. Then grate as much of it as is required for a meal, and have it boiled in water, subsequently adding milk or broth. Baked rusks are also good for children, provided they are not too brown. Pearl barley boiled to a jelly and passed through a sieve, often agrees better than any other kind of food.

HEADACHE.—If headache with nausea follows a disordered stomach, and the whole head feels as if every thing in it were bruised, give *Ipecacuanha*. For oppressive headache, with heat in the brain, worse after walking, reading, or eating, with putrid taste, *Arnica*. For throb-

bing, shooting headache, worse when talking, with much nausea, take *Aconite*; for dull, general headache, worse whilst going up stairs, and from smoking tobacco, without appetite, with a bitter taste, rising, hiccough, loathing and nausea, worse after drinking wine *Antimonium crudum*.

For burning, pressing-bursting headache, worse when stooping, as if all would fall through the forehead, throbbing or tearing and piercing pain when walking, or splashing as if from water, worse in the morning early, or with chills, give *Bryonia*.

A one-sided, or rending, throbbing, jerking headache, worse in the evening after lying down, attended with a putrid or earthy taste in the mouth, and without thirst, is relieved by *Pulsatilla*. If there is heaviness in the head, and great soreness of the scalp when touched, with trembling in the jaws, a salty taste, and cramp in the stomach, give *Carbo vegetabilis*; especially to persons who have taken much mercury.

ERUCTATIONS OR RISINGS.—See beginning of the chapter.

VOMITING.—If occasioned by a disordered stomach and the tongue is coated, give *Ipecacuanha*; if the tongue is clean, *Tartar emetic*; if produced by eating too much bread, and attended with great oppression about the pit of the stomach, *Bryonia*.

If produced by overloading the stomach and attended with bitter taste, or when a burning sensation in the throat remains after vomiting, *Pulsatilla*.

If accompanied by much loud belching of wind, hot face, and palpitation of the heart, *Sepia*.

Cramps occasioned by disordered stomach are often cured by the same remedies, according to the similarity of the causes. For other remedies, see "Stomach" and "Cramps."

FLATULENCY.—If it swells the belly, renders breathing difficult, and is caused by flatulent food or drink, such as cabbage, especially sour crout, if from new beer and the like, and particularly when there is a painful tightness across the belly, with pains and pressure about the navel, if at times he passes offensive wind, and is chilled after drinking, take *China*. If drinking gives rise to pressure in the pit of the stomach, which obstructs breathing, the clothes around the ribs feel too tight, and there is a weight as from stones in the abdomen, *Nuxvomica*.

If caused by eating fat food, after which much water has been drunk, when the wind rolls in the bowels, the belly appearing too full and hard, worse in the evening, *Pulsatilla*.

If oppression of the chest proceeds from an accumulation of wind, with jerking and shooting pains, a tension about the pit of the stomach—without exactly swelling the belly—causing a state of utter restlessness and anxiety, *Phosphorus* will afford relief.

Persons subject to flatulency may take as much of finely pulverized wood-charcoal as will lie on the end of a dessert-knife, once or twice a day; but if *Carbo vegetabilis* will give relief, the improvement will last much longer. Persons who pass offensive wind, should refrain from eating eggs.

COLIC.—Sudden attacks caused by eating too much, or by a foul stomach, are often relieved by taking coffee without milk; if this fails, give *Ipecacuanha*, *Pulsatilla*, *Colocynthis*, or some other remedy indicated under “Colic.”

DIARRHŒA.—Arising from disordered stomach, is generally cured by *Pulsatilla*; in children, when accompanied with nausea and vomiting, by *Ipecacuanha*; in children who are sleepless, excited and too lively, by *Coffea*; if

cutting pains in the bowels seem to go upwards and produce nausea, and there is great weakness after each evacuation, by *Nux vomica*. See "Diarrhœa."

For diarrhœa after eating fruit, *Ipecacuanha*; if the evacuations are slimy, accompanied by slight pain and the external belly is sore, *Pulsatilla*; when the discharges are watery, very offensive, with burning and cutting pain in the belly, *Arsenicum*. If the diarrhœa is worse after midnight until morning, give *Arsenicum*; if later in the morning, *Pulsatilla*. Compare what is said above under "Disordered Stomach."

SLEEPLESSNESS.—If produced by overloading the stomach, it often yields to *Coffea*, particularly with children, or to *Pulsatilla*. If caused by strong coffee, *Nux vomica*.

NIGHTMARE.—From eating too much, can only be prevented by avoiding the cause. A person who is subject to this complaint, should not eat too much at night, and take the medicines recommended for "Nightmare."

FEVER, with chilliness, disordered stomach, diarrhœa or constipation, particularly in persons of a passionate, cross temper, may be removed by *Bryonia*; to phlegmatic, awkward persons who are easily offended, give *Capsicum*. If the fever returns every second day, *Antimonium crudum* or *Ipecacuanha*. See "Fevers."

RASH arising from a disordered stomach, with chilliness and depression of spirits, is often cured by *Pulsatilla*; with sickness of the stomach and difficulty of breathing, by *Ipecacuanha*; if this proves useless, give *Bryonia*. If caused by noxious food, see "Poisoning." For other remedies, see "Eruptions."

INDISPOSITION FROM COLD WATER OR ICE.—If drinking

of water confuses the head, produces nausea and heat, take *Cocculus*. If it produces cough and headache, *Aconite*; if cough, vomiting and chills, *Arsenicum*; if bad taste, as if the water were impure, coldness in the belly, pain in the bowels and chills, *China*; if nausea with pain in the bowels, *Pulsatilla*; and if this does not give relief, *Rhus tox*.

If drinking water produces hiccough, take *Ignatia*; oppression at the stomach, *Ferrum*; if it causes bloating of the abdomen, as from flatulency, with pressure in the pit of the stomach, difficulty of breathing, and chills, take *Nux vomica*; if it causes constant inclination to go to stool, and purging, *Capsicum*; pain in the chest and shuddering, *Veratrum*.

If it is followed by toothache, take *Bryonia*, *Mercurius*, or *Staphisagria*, according to symptoms. If merely sensitiveness of the teeth, without pain, *Mercurius* or *Sulphur*. See "Toothache."

If a person habitually takes cold in the stomach from drinking cold water, and has in consequence accustomed himself to mix spirits with the water, and wishes to leave off this habit, let him try some of the medicines recommended above. If he does not succeed, let him take a drop of pure sulphuric acid, and mix it with a pint of water by pouring it for some time from one tumbler into another, and take a table-spoonful of this in the morning, fasting, once or twice. This will often warm the stomach, and gradually accustom it to pure water again.

When *drinking hastily* disorders the stomach, give *Silicea*.

When *cold drinks* cause indisposition, *Nux vomica* or *Staphisagria* may give relief; if not, try *Calcarea*.

Sudden indisposition from *ice*—or *very cold water*, taken in hot weather, generally yields to *Opium* or *Glonoine*. See "Sunstroke." Give *Glonoine* especially if accompanied by a tendency of blood to the head, twitching in the face, unconsciousness and giddiness almost to reeling. Per-

sons in the habit of drinking spirituous liquors require *Nux vomica*. If the countenance is pale, if there is a sensation of choking and drooping, a few drops of spirits of camphor, on sugar, or diluted with water, may be administered. Should any symptoms remain, such as headache, or rush of blood to the head, *Belladonna* or *Glonoine* will be beneficial; see "Headache." For affections of the stomach, fever, etc., give *Carbo vegetabilis* or *Arsenicum*.

For long-standing disorders of the stomach, caused by drinking ice-water in the summer, attended with great weariness, little appetite, if whatever food is taken lies like a weight on the stomach, or is thrown off again, sometimes this is sour, with soreness of the stomach upon pressure; if the stomach and abdomen are distended by wind, the flatulency becoming very troublesome, the symptoms growing worse in the open air, *Carbo vegetabilis* will be serviceable.

If there are pains in the stomach, or other symptoms arising in consequence of having swallowed pieces of ice, *Arsenicum* will be the remedy, or *Pulsatilla*.

Arsenicum may be administered in cases with violent pressure on the stomach, a burning sensation confined to a small spot, or extending over the stomach or abdomen, great anxiety and disquietude indicated by the countenance; tongue dry; constant thirst, drinking often but little at a time; every thing has a saltish taste; nausea produced by motion, or after drinking, even to vomiting sometimes of bile.

Pulsatilla if there is a cramp-like pressure in the stomach worse after eating, in some cases attended by vomiting; the countenance expressing a disposition to cry; the tongue slimy, taste insipid; no thirst; nausea after eating and drinking, worse in the afternoon and evening, with sour rising, sometimes of wind only, retaining the taste of what the patient has eaten.

The same remedies will answer in affections of the stomach, produced by eating *cold fruit, ice-cream* and the like. It is particularly injurious to eat ice-cream as a dessert; directly after eating, the stomach needs and produces heat for digestion; anything very cold taken at this time, must therefore prove doubly injurious. Sometimes a kind of *paralysis* of the stomach ensues, which occasionally yields to *Arsenicum*.

Every one should be able to drink *milk*; if it does not agree, it is an indication that there is something wrong about the stomach. If it produces a sour taste in the mouth or costiveness, give *Nux vomica*; if pains in the bowels and diarrhœa, *Sepia* or *Lycopodium*; and if there is rising and vomiting of phlegm and other complaints, and the other remedies have had no effect, *Sulphur*; if it produces long-lasting nausea, *Calcarea*.

Persons who feel indisposed after *drinking malt liquors*, will do well to refrain from them, at least from the stronger kinds, which sometimes owe their strength and bitterness to injurious drugs. But if the head should become too easily affected after drinking good beer, etc., take *Rhus tox.*, or *Belladonna*. If the beer causes vomiting, take *Ferrum*; if nausea, *Arsenicum*; if colic, *Colocynth*.

If a person has taken a little too much *wine* and feels ill therefrom, he may take *Nux vomica*; if the smallest quantity of wine affects the head, take *Zincum*.

Whoever feels indisposed after *drinking brandy*, may congratulate himself; the best and most salutary advice we can give him is—to let it alone. A dose of *Nux vomica*, however, may moderate the injurious effects.

CHAPTER V.

CONSEQUENCES OF SPIRITUOUS LIQUORS, COFFEE, TEA, TOBACCO, ACIDS, ETC.

DRUNKENNESS.

Habitual drunkenness is ruin to individuals, a calamity to families, and a serious loss to a nation. It is therefore no wonder, that benevolent minds have proposed remedies to prevent such great evils; neither is it astonishing that many who are as ignorant of history, as of the laws of the life of man and nations, should run mad with a most fanatic opposition to alcohol, bundling up with it all kinds of malt liquors, and even the most noble of all the productions of nature—wine.

Ministers, as ignorant of the original language of the gospel, as of the

most common laws of chemistry, tell their flock, that the wine, mentioned in the New Testament, is grape-juice, not fermented and not "intoxicating."

The Greek word used in the New Testament for wine is *οινος*, which means *fermented grape-juice*; the word *unfermented grape-juice* is *γλενκος*, and the word for *drunkenness* is *οινωσις*, signifying that drunkenness comes from *fermented wine*.

The history of the human race proves most clearly, and *without a single exception*, that there never was in any nation a popular development of science, literature and the fine arts, until after the introduction and culture of the grape-vine, or as in England and Sweden, after a facilitated importation of wine.

The latest chemical analyses have also proved, that wine contains combinations of phosphorus, which is a most important nourishment of the brain upon which depends its highest development.

For the individual, wine may not be a condition, without which no great works of the mind can be produced, but it is so with nations. No great minds can arise in a nation, in which there is not a large number of men of great brains.

Hence the religion of the Jews acknowledges the grape-vine as a gift of God after the flood, to prevent another sinking of the human race.

Hence in the religion of the Christians, the wine is holy as an indispensable link between the Lord and mankind.

Mahomedanism forbids the use of wine, of course without any good effect whatever, for its absence encourages the use of opium, hemp-juice and other dangerous substitutes.

The absence of wine promotes the dangerous use of alcohol and drunkenness.

All intelligent travellers agree in allowing that drunkenness is by no means common, nay, that it is a rare thing in wine-producing countries. Thus the true remedy against a popular inclination to drunkenness would be, with every wise law-giver, to favor the consumption of wine by facilitating the home-production and the importation of wine.

The pitiful condition, drunkenness, in which we still see so many persons needs no description. However, drunk a person may be, the best way is to let him sleep it off; but sometimes it may be necessary to restore him soon—at least so far that he can be removed, in which case the best remedy is an external application of cold water; if there is vomiting and retching give black coffee as much as he will drink, and hot. If the drunkenness is from malt liquor, tea will be more beneficial.

If he is not quite so far gone, a cloth dipped in cold water, and wrapped round the abdomen and loins may suffice; some are more quickly restored when the wet cloth is applied to the nape of the neck or back of the head.

If the face of a drunken man has a purple hue, his look fixed, if he does not come to his senses, the throwing on

of cold water producing only temporary effect—when there is twitching and trembling in the face and around the mouth, or a cramp prevents the opening of the mouth—apply a cloth, dipped into cold water, to the head, and give *Opium* every fifteen minutes until he improves; if this fails, give *Aconite* or *Belladonna*; according to symptoms.

If children are made tipsy by thoughtless or vile persons—or swallow brandy by accident—wash their head and abdomen with cold water, and give them, every quarter of an hour, a teaspoonful of hot water, a pint of which has been poured on a bitter almond. If they do not soon fall into a sound sleep, give *Nux vomica*. If they fall into a stupefied sleep, with snoring, the face red and the head hot and sweating, give *Opium*. If they are too lively and merry and cannot sleep, *Coffea*. If they have fever, with constant tossing about, give *Aconite*, and if this does not remove it in two hours, *Belladonna*. If they fall into convulsions, give first *Opium*, if this does not answer, *Nux vomica*, and if this fails *Chamomilla*.

Some ignorant women when confined, take from habit, or by the advice of stupid midwives or monthly nurses, spirituous liquors, to obtain sleep for themselves and the child. This is an abominable habit; they expose themselves and the child to the greatest danger; and if not attended by immediate bad consequences, it may be in the future. Under these circumstances, select for the mother and child one of the above mentioned medicines.

Besides the confirmed drunkard, there are others who only once in a while allow themselves to be led astray, and who are ashamed of their conduct afterwards. These we advise, after any excess of this sort, to take a few globules of *Nux vomica*.

There are, however, many who have fallen into the habit of drinking from vexation, grief or care. Their own consciences will tell them to what a horrid alternative they have had recourse; and we earnestly exhort them not to taste, not to touch a drop of liquor again, under any pretext whatever, but to force themselves to drink, daily, cold water, even if it should produce qualmishness, and to take the medicines recommended for the effects of drinking; also, the medicines which suit for vexation and grief.

There are other drunkards who are driven to drinking by a morbid state of their system, by a peculiar kind of "dyspepsia." These deserve our compassion; but although we may pity them, they themselves cannot excuse their habit by it. For some other morbid state urges one to anger, another to laziness, a third to incontinence, but there is no excuse for either. Were it otherwise, every one might find a ready excuse for his favorite vice, and easily imagine that he could wash off his impurity in a sink. When the passionate man does not bridle his anger, the lascivious his cravings, and the intemperate his inclination to strong drink, his morbid sensibilities will increase. No; they ought to pursue a course directly opposite. He who is given to anger should constrain himself to submit even to unmerited abuse; the voluptuary should repress all vicious thought, and avoid every temptation; the lazy should work until they are perfectly exhausted; and he who longs for strong drink, should not even smell alcoholic liquors.

In all cases of that disease which causes a morbid desire for alcohol, consult a homeopathic physician. If this cannot be done, take *Sulphur*, in water, every morning for a week. Should the desire abate, and afterwards return, take *Nux vomica* for several days in the evening; and if it returns again, in two or three days, *Sulphur*. If this does not prove efficacious, give *Arsenicum*. In all cases the patient should accustom himself to drink milk, and plenty of it. If the milk disagrees at first, and produces diarrhoea or other symptoms, take the remedies prescribed for that purpose.

EFFECTS OF DRUNKENNESS.

After drinking too much in the evening, sometimes even after taking but a few glasses of wine, one may feel unwell, heavy and stupid in the morning; the face be pale and haggard; the eyes pained by the light; the mouth parched and rough; nausea, pains in the pit of the stomach, hoarseness, heat in the hands and soreness in the limbs, as if bruised; some are weak, sleepy, chilly, languid, cross and passionate; sometimes there is bleeding of the nose, or cramp in the stomach; in such cases give either *Nux vomica* or *Carbo vegetabilis*.

If the headache is throbbing, or attended with pressure over the eyes or, better in the cool, fresh air, *Carbo vegetabilis*; if worse in the open air, and more in the temples, *Nux vomica*.

If the pain is attended by a feeling as though a nail were lodged in the head, and is on one side only, worse when walking, at every motion, in the open air, from thinking and stooping, *Nux vomica*.

If there is only nausea, *Carbo vegetabilis*; an inclination to vomit, and retching, *Nux vomica*. If the stools are thin and pale, *Carbo vegetabilis*. If there is much pressing and forcing, with slimy purging, *Nux vomica*.

If there is much giddiness, red eyes, with matter in the corners, great sensitiveness to the light, or a dry, hacking cough, *Nux vomica*.

If the headache does not abate in two or three hours after taking *Nux vomica*, take *Coffea*. If the nausea continues, the stomach very weak, and the tongue furred, take *Antimonium crudum*.

In indisposition from the repeated use of wine or spirits, which has already continued for some time; tedious headache, fullness and heaviness of the head, or cramp in the stomach, weakness of the stomach, constipation, piles, pains in the back, miliary eruption, or much itching and biting over the whole body, *Nux vomica*; afterwards *Carbo vegetabilis* or *Lachesis* may be taken; the former, if the symptoms are worse early in the morning, or in the open air; the latter, if they are worse after sleeping, especially in the afternoon, and if aggravated by hot weather.

For tedious headache, which has not only been caused by intemperance, but is aggravated by drinking spirituous liquors, by thinking, mental application, speaking, stooping, after reading or writing, the patient being very weak, give, if he is stout and plethoric, *Calcareae*; if of a spare habit, *Silicea*.

Do not repeat the dose until he is worse again, and should the repetition fail, give *Lachesis*.

If the effect of wine is only to irritate, excite and produce trembling, with nervousness, an uncomfortable dry heat and splenetic humor, give *Coffea*; if the least quantity affects the head, *Zincum*.

DELIRIUM TREMENS OR MANIA-A-POTU.—In this sad and terrible disease of drunkards, in which the one affected has visions of animals, monsters, strange human faces, etc., hears voices scolding, thinks he is being called, attended with raging and raving, fits and convulsions, instead of worrying the unfortunate being with large quantities of irritating, weakening drugs, give *Opium*, frequently repeated. In the beginning of the disease, *Arsenicum* alone will frequently effect a cure. If these remedies should not afford relief, give *Calcareae*, morning and evening.

If the patient sees animals or fire at intervals, with fearfulness and a wish to escape, the head is hot, the face flushed, the eyes brilliant and sensitive to the light, the arteries of the neck throbbing violently, give *Belladonna*. *Hyoscyamus* is preferable, if the patient has shown symptoms of jealousy and threatens violence; *Stramonium*, if with the delirium there is a religious frame of mind manifesting itself in prayer and supplication.

If this should afford no relief, if the throat is affected,

the attacks appearing more in the afternoon, or after sleeping, the patient talks much, flying from one subject to another, cannot bear his shirt collar or necktie, but strives to have them removed, *Lachesis*.

Cold sweat in the face, anxious desire to run away, visions of devils, etc., *Veratrum*.

Premonitory symptoms, as seeing creeping animals; turning of the head sideways as if to look for something; hearing of voices, etc., may be removed either by *Arsenicum* or *Calcarea*.

Arsenicum for lean persons, tobacco chewers; if they hear the voices of relatives or others, generally overhead, in the corners of the room, up or down stairs; see insects creeping in the bed; see the room full of thieves or spectres; are driven out of bed by anguish; fear to die; especially after great grief or pangs of conscience.

Calcarea for persons of a full habit, so called "free livers," nervous and irritable; despair of their own health; fear of getting crazy; sleepless; horrible visions almost always when shutting the eyes.

The same remedies ought to be given after the attacks are over, according to the symptoms, but in many cases they have only effected a cure when given at long intervals.

Total abstinence is absolutely required; cold water, not, however, ice water, should be drunk freely. If the patient desires it, the very moderate use of malt liquors, and also of tobacco, may be allowed. If the latter increases the symptoms, *Arsenicum* may be given. If premonitory symptoms of apoplexy appear in drunkards, total abstinence from malt liquors and tobacco is necessary, and *Belladonna* or *Lachesis* may be given. In all such cases a homœopathic physician had better be consulted.

BAD EFFECTS OF COFFEE.

For sleeplessness, palpitation of the heart, great irritability of the nervous system, violent cramps in the stomach, take *Nux vomica*.

For violent headache, as if a nail were driven into the head, or heaviness, rending pain in the head, give *Ignatia* or *Nux vomica*. If it is better when stooping, or if there is a throbbing in the whole head, if the patient is of an undecided, inconstant disposition, *Ignatia*; if worse when stooping, or walking, attended with much giddiness, confusion and heaviness in the head, and the patient is of a choleric temperament, *Nux vomica*.

Violent, one-sided headache, yields usually to *Nux vomica*; but if there is weeping or screaming, and great sensitiveness, give *Chamomilla*.

Frequent toothache following immediately upon drinking coffee, or tooth-

ache in general in persons accustomed to the use of coffee, generally yields to *Chamomilla*. If so violent, that the patient is almost beside himself, give *Coffea* and afterwards *Chamomilla* or *Nux vomica*; the following medicines may also be required: *Cocculus*, *Belladonna*, *Mercurius*, *Carbo vegetabilis*, *Pulsatilla* and *Rhus tox.* Compare "Toothache."

For violent cramps in the stomach, if worse after drinking coffee, *Nux vomica* or *Cocculus*; if temporarily relieved by coffee, but worse afterwards, *Chamomilla*.

Violent pain in the bowels, or colic, *Chamomilla* or *Nux vomica*; frequently *Colocynthis* or *Belladonna*.

Pain in the groins as if a hernia were going to appear, is relieved by *Nux vomica*.

If, after the habit of drinking coffee has been abandoned, the above tedious effects will not yield to *Nux vomica* and *Chamomilla*, the following remedies are sometimes useful:—

Cocculus, when the least exercise is attended by perspiration; frequent trembling; starting when asleep; heat; frequent toothache when eating; lightness in the head; sadness; agitation; when every indisposition is aggravated by fresh air, exercise, eating, drinking, sleep, or smoking.

Ignatia, when there is much debility; emptiness in the pit of the stomach; frequent spasms in the abdomen; painfulness or numbness in the limbs, generally pressing pain as from hard-pointed substances, it obliges the patient to shift his position, after which he feels better; the disposition is inconstant, sometimes excessively lively, at others depressed and inclined to weeping.

TEA.

For indisposition from green tea, take *Coffea* or *Ignatia*, and if there is no improvement in a few days, *China*. For tedious complaints from tea, *China* or *Ferrum*.

TOBACCO.

If persons unaccustomed to smoking have been made ill thereby, give *Pulsatilla*; for violent headache and nausea, *Aconite*; giddiness and dizziness to fainting, vomiting of bile and diarrhoea, *Chamomilla*; and if not sufficient, and there is much coldness, *Veratrum*; if this will not answer, let them smell camphor. Violent convulsions and other symptoms may be removed by *Cuprum* or *Cocculus*. See "Poisoning."

If a person accustomed to smoking feels unwell after it, *Cocculus* or *Ignatia* will generally relieve him. If it occasions toothache, give *Bryonia* or sometimes *China*. If it causes sickness of the stomach, *Ignatia* or *Pulsatilla*; if uneasiness and nausea, *Staphisagria*. The same remedies may be given for

bad effects from chewing tobacco. Especially *Nux vomica*, *Arsenicum*, *Chamomilla*, *Pulsatilla* or *Cocculus*, and sometimes *Cuprum*.

Chronic consequences of immoderate smoking or chewing are difficult to cure; nervousness and weakness of the stomach are generally removed by *Nux vomica* or *Cocculus*; habitual constipation by *Nux vomica*, *Staphisagria*, *Mercurius*. The diseases to which those who manufacture tobacco are subject, cannot be removed unless the patient quits his employment. The remedies most effective in such cases are *Arsenicum*, *Colocynth*, and *Cuprum*.

SPICES.

For the injurious effects, occasioned by spices, such as pepper, ginger and the like, give *Nux vomica*; if from nutmeg or saffron, *Ignatia*, sometimes *Opium* or *Coffea*.

SOUR THINGS.

If the bad consequences, particularly diarrhœa, set in at night or during the night, give, if the head is much affected, also the chest, *Nux vomica*; if in the day time, *Antimonium crudum*; with pain in the bowels, *Staphisagria* or *Belladonna*; if accompanied by much coldness, *Veratrum*; if fever follows, *Lachesis*.

Red eruptions, like scarlet rash, with pains in the throat caused by eating oranges, and other sour fruit, is cured by *Belladonna* or *Rhus tox.* Long-lasting consequences are relieved by *Calcarea* or *Causticum*, according to the symptoms.

Other symptoms from the use of sour things may yield to *Arsenicum* or *Sulphur*. *Arsenicum* for persons who have too much appetite and eat too much; *Sulphur* for such who have a constant craving for sweet things. When acids aggravate the symptoms of a case, give *Belladonna* or *Lachesis*.

If there is a craving for acids and sour food, *Arsenicum*, *Arnica*, *Belladonna*, *China* or *Lachesis*. If the craving is merely for sour drinks, give *Bryonia*.

For heartburn and vomiting after sour victuals, give *Ferrum*; for vomiting of a watery fluid after the use of acids, *Phosphorus*.

For disordered stomach from acids, *Arsenicum* or *Lachesis*.

For diarrhœa from the use of acids and sour fruits, *Lachesis*; if from fruits merely, *China*.

CHAPTER VI.

EFFECTS OF INJURIOUS DRUGS IN GENERAL USE, AND REMEDIES TO COUNTERACT THEM.

WHEN sudden and dangerous symptoms appear after administering a dose of physic, we may take for granted that the patient is poisoned, and look under the head of "Poisoning." Vegetable poisons are often more rapid and violent in their action than mineral poisons, and produce the same strong and lasting injurious effects. Animal poisons are even more violent than vegetable poisons. The boasts of nostrum venders respecting the innoxious effect of their alleged vegetable medicines, are deception and humbug.

It is true, there are some herbs which do not produce any dangerous effects, and some medicines are not very injurious; but even these should not be given without due consideration, nor in large quantities for any length of time. For it is certain, that if you give the proper medicine, very little will suffice, and if you give an improper one, the larger the dose the more injurious it will prove.

In large and frequently repeated doses every medicine may therefore be considered a poison.

When a person has taken such vile stuff, or given it to children upon the recommendation of physicians or apothecaries, the evil may possibly be remedied, by observing the following directions:

HERB TEAS.

Such as chamomile and similar ones, if they cause a great deal of pain, or if they increase the pains, which the patient had before, give *Coffea*, and afterwards, if required, *Nux vomica*; for nausea, vomiting and diarrhoea, *Pulsatilla*; *Pulsatilla* also if chamomile tea has increased and made unbearable the colic and other pains of women at the commencement of the courses. If it has caused violent fits and convulsions in children, give *Ignatia*; for fever and heat with great sensitiveness and excitability, *Coffea*; for fever, dry heat, tearing, drawing pains, anxiety and restlessness, *Aconite*. -

OPIUM, LAUDANUM, OR MORPHINE

Often produce dangerous symptoms. See "Poisons." For the immediate bad effects, give *Belladonna* in frequent doses. For the lingering effects of

opiates, which never fail to appear, sooner or later, ask the advice of a physician, or take from time to time, *Coffea*, *Nux vomica*, or *Mercurius*; the latter to be followed by *Sulphur*.

All soothing syrups contain opium in some shape or form, and should be discarded as worthless and dangerous. Children brought up on them become puny, sickly and often idiotic. The same remedies are applicable; also *Muriatic acid*, but a homœopathic physician should be consulted.

HYDRATE OF CHLORAL.

This is a preparation which is used by the old school to produce sleep in cases of nervous wakefulness and delirium. It is only a palliative, and if too long persevered in, its injurious effects are incalculable. Large doses have been known to produce poisoning and death in a number of cases. For the immediate injurious effects *Belladonna* is probably the best remedy, and should be frequently repeated. A physician should be sent for. For the chronic effects, such as increased wakefulness, shortness of breath, eruptions and blotches on the skin, give *Sulphur*.

PERUVIAN BARK, QUININE, ETC.

Next to opium and mercury, these most frequently undermine the constitution, and occasion incurable diseases. Should the patient escape death, he will be troubled for years by their effects. It is more difficult to expel quinine from the system, than mercury; and he who pretends that this can be effected by cathartics, is utterly ignorant of physic. It enters the blood and all the fluids, and no purging in the world will remove it.

To relieve the patient from its effects, will require patience, but it may be gradually accomplished by the following means. The chief medicine, in most cases, is *Ipecacuanha*.

For rheumatic pains, heaviness, prostration, soreness in all the limbs, drawing pain in the bones, great sensitiveness of every part of the body; when exercise, speaking or blowing the nose or loud sounds aggravate the pains, give *Arnica*.

When the body is cold, with cold perspiration, constipation or diarrhoea, *Veratrum*. For jaundice give *Mercurius*, and later if required, *Belladonna*.

For heat in the face, determination of blood to the head, much pain in the head, face and teeth, give *Belladonna*. For earache, *Pulsatilla*. For swelling of the feet, *Ferrum*. For ulcers of the legs, dropsy, short cough and shortness of breath, *Arsenicum*. For dropsy and other swellings, *Rhus tox*.

If there are other complaints, look under the respective heads, and select the medicine accordingly; the following will in many cases be found useful: *Sulphur*, *Calcareæ*, *Carbo vegetabilis* and *Hepar*.

When quinine has been misapplied in intermittent fever, often another and worse complaint than the fever makes its appearance; or the fever remains, and is now more difficult to cure.

If the fever has been suppressed, and earache, toothache, headache and pains in the limbs appear, give *Pulsatilla* and if this fails, *area*. For affections of the stomach give *Ipecacuanha* or *Pulsatilla*; for swelling, *Arnica*, *Arsenicum* or *Ferrum*, and select according to circumstances, one of the remedies recommended above.

If the intermittent fever continues, as it often does, notwithstanding the use of large quantities of bark or quinine, give first *Ipecacuanha*, afterwards, if required, *Arsenicum* or *Carbo vegetabilis*; in some cases, *Veratrum* or *Arnica*; *Belladonna*, *Mercurius*, *Sulphur* or *Calcareæ* in others.

OTHER DRUGS.

When the mixtures, which the unfortunate patient has had to swallow, contain Conium or Cicuta, Digitalis, Laurocerasus or Acidum hydrocyanicum, it is sometimes scarcely possible to save him, unless a good constitution throws off the ill-effects, assisted by proper living, fresh air, the drinking of much water, and a good homœopathic physician, both exercising much patience.

After taking Digitalis, even in small doses, if continued for a time, dangerous symptoms very often suddenly follow. These are generally relieved by repeated smelling of camphor, sometimes by vinegar or wine in drop doses, or by laudanum in moderate doses. Smelling of ether or chloroform makes them worse. Later, according to circumstances, give *Glonoine*, *Opium*, *Nux vomica* or *Ignatia*. Be careful not to give *China*.

Persons who have swallowed much *Asafetida*, or much Valerian and other drugs which enter largely into the composition of certain quack pills, are generally in a very critical situation. *China* or *Mercurius* sometimes counteracts the effects of *Asafetida*; for indigestion and particularly belching, *Pulsatilla*. *Coffea*, *Nux vomica*, *Chamomilla* or *Sulphur* are to be given for the effects of Valerian; *Pulsatilla* and *Nux vomica* for those of Colchicum; the very dangerous diarrhœa, resulting from large doses of this so-called remedy for the gout, may be relieved by laudanum, to be taken one drop at a time, every two hours; this may be repeated four or five times. *Belladonna*, *Bryonia* and *Arnica* for the bad effects of Senega; *Mercurius* or *Belladonna*, very often *Sulphur*, but particularly *Sepia* for those of Sarsaparilla.

If the application of Spanish-flies produces bad symptoms, give *Aconite* or *Pulsatilla*.

When children have taken much rhubarb, and are consequently troubled with flatulency and slimy diarrhœa, give *Nux vomica*; if they have sour vomiting during the night, clayey stools and diarrhœa, *Pulsatilla*; if they have sour stools, green, or mixed with blood, *Mercurius*; bad colic and green evacuations, *Chamomilla*; and if the colic does not get better, *Colocynth*.

EFFECTS OF MAGNESIA.

If a person has taken magnesia and feels poorly, particularly after calcined magnesia, let him smell sweet spirits of nitre; if he cannot sleep, give *Coffea*; if it produces violent pains in the bowels, *Chamomilla*; and if they are very bad, without much or any evacuation, give *Colocynth*; if no evacuation follows in twenty-four hours, give *Nux vomica*; if the patient has violent pains, and particularly burning pains with fever, give *Arsenicum*; but if the magnesia has produced sour-smelling thin stools with colic, *Rheum*; and if this fails, *Pulsatilla*. The same remedies should be given if similar effects are produced by Epsom salts.

EFFECTS OF SULPHUR, IODINE AND IODIDE OF POTASSIUM.

The effects of sulphur are occasionally as bad as those of mercury, and the tedious complaints which it produces, as difficult to cure. If a person feels unwell soon after having used it, he should smell camphor; if this does not relieve him and the pains are violent, particularly in the head, accompanied by heat, let him take *Aconite*; later, when the complaint has become chronic, *Mercurius* or *Pulsatilla*, and sometimes, according to circumstances, *Sepia* or *Silicea*. For the bad effects of sulphurous vapors from the lighting of matches, from which children often get a cough, shortness of breath and pains in the throat and chest, *Pulsatilla* is the best remedy.

If sulphur has been given to children, in conformity to a notion of its beneficial effects entertained by some parents, especially in the spring of the year, and it has occasioned fever, with pains in the bowels; or if eruptions, for which it was given, should have been suppressed, or when very painful boils ensue, *Belladonna* is very often efficient; care is, however, to be taken afterward, to guard the children from taking cold, not by keeping them in warm rooms, but by preventing their being in draughts, or sitting on the ground, etc.

When patients suffer from the effects of iodine or iodide of potassium, administered, as they usually are, in large doses and for a long time, give *Hepar*.

EFFECTS OF MERCURY.

In all diseases this is the universal elixir of the quacks who, whilst they pretend to restore their patients to health, destroy their constitutions. It is administered as calomel in powders, or as corrosive sublimate in a dissolved state, or in the form of pills—those abominable blue pills. Beware of all prescriptions in which names like the following occur: Calomel, Merc. subl. corros., Merc. præcipit., Hydrargyrum, Hydrarg. chloridum, Hydrarg. bichlorid., Argent. viv., or of salves containing mercury. People are frequently imposed upon by being told that mercury can be expelled again by taking aperient medicines after it. Those who hold such views, close their eyes to the injurious effects which ensue from taking mercury; for, supposing it were as easy to remove the calomel as it is to swallow it, the effect produced upon the body will certainly remain; just as if you were to drive a nail into a man's leg and then pull it out again—the hole will remain; it will heal after a while, but it requires time and a rational mode of treatment, or the consequence may be very serious. To give aperient medicines then for the effects of mercury, is about as sensible as if I were to insert a wooden peg into the wound made by the nail, and imagine it to be all right again.

Mercury in all its preparations, however, cannot be expelled as easily, and least of all, by purgatives, as it immediately penetrates every part of the system, the fluids, the glands, and even the bones.

This is the reason why the slow poisoning by mercurial medicines is far more difficult to cure than a natural disease; it always requires much time, and in many cases mitigation of the sufferings is all that art can effect for the patient.

In most cases, immediately as well as long after taking mercury *Hepar* will be found of great service, particularly for the following symptoms: dizziness; headache during the night; loss of hair; painful lumps on the head; inflamed, red eyes; pains in the nose when pressed; eruption round the mouth; much saliva in the mouth; ulcerated gums; mucus low down in the throat; swelled tonsils; hard glands on the neck; a pricking pain when swallowing, coughing, breathing, or turning the neck; swollen, inflamed, suppurating boils in the groin or arm-pit, or small ones on the chest; thin stools with great straining, sometimes mixed with blood, slimy and green; the urine dark red, hot and acrid; coughing when a hand or foot gets cold, or after drinking, sometimes accompanied by spitting of blood; felon, or other red, inflamed swellings on the hands and fingers, also of the knee, like rheumatism; the entire skin is diseased, nothing heals well; every little wound or scratch suppurates and spreads; the skin of the hands and feet cracks; ulcers, which bleed easily, burn in the night, with throbbing and stitching pain; chilly in the air; in the night, chills and frequent pains in the limbs; also fever, and afterwards clammy, sour sweat; the patient very sensitive, the pains almost produce fainting.

It is advisable, after continuing its use for six or eight days, to await the effect of *Hepar* for some days; if it produces slow improvement, wait a fortnight; if after this the improvement does not continue, repeat the same medicine; if the improvement was but of short duration, and it is absolutely necessary to give something, *Belladonna* is the best; the same will answer when *Hepar* has been given two or three times, once every fortnight, and has lost its efficacy.

For complaints of the mouth and throat, for swelling of the tonsils, and deafness, give *Hepar* and later *Belladonna*, and if they produce no change, *Staphisagria*.

For great sensitiveness to the weather; violent pains, particularly during the night, worse when touched; great weakness; when the patient has been debilitated by much purging and salivation, give *China*; and if this has no further effect, *Carbo vegetabilis*, particularly if change of weather makes the patient worse.

If, after taking some of the remedies recommended above, there still remain rending pains in the bones and gouty swellings, give *Dulcamara*, and afterwards *Phosphoric acid*; for swellings on the bones (nodes), *Phosphoric acid*, and afterwards *Staphisagria*; and when this ceases to do good, *Calcarea*.

If this medicine has been taken for a considerable time, and the complaint is not completely removed, try *Sulphur*, and some time after, one of the above remedies again. If *Sulphur* gives relief, take several weeks afterwards *Calcarea*, and after that some other suitable medicine, for instance, *Lachesis*, which may be followed by *Lycopodium*.

If a person has taken much mercury, and afterwards sulphur, it will be well to give *Mercurius*, and then *Belladonna* or *Pulsatilla*.

When a person has taken much mercury, but no sulphur after it, and *Hepar* should not seem to be quite indicated, according to the foregoing description, give *Sulphur*.

In tedious complaints, caused or aggravated by mercury, select from the following: *Hepar*, *Belladonna*, *China*, *Phosphoric acid*, *Carbo vegetabilis*, *Dulcamara*, *Staphisagria*, *Lachesis*. In many cases, where immediate relief is required, *Opium*, *Pulsatilla*, or the medicines prescribed under "Poisoning," will answer; in some few cases, *Arsenicum*, *Ferrum*, *Rhus* or *Silicea* will be available.

EFFECTS OF LEAD.

Lead is often an ingredient in medicines, such as white ointment, plasters, Goulard's lotion, etc., which are used to dry up and cure eruptions, ulcers, bruises, burns and wounds. It is almost as poisonous, when applied externally, as if it were used internally, and produces constipation, colic, cough, and disease of the lungs. To remove these effects, give *Opium*, fre-

quently repeated or *Glonoine*, followed by *Nux vomica*, or *Belladonna*, and afterwards, if necessary, *Mercurius* or *Platina*.

EFFECTS OF ARSENIC.

If the so-called medicines contain arsenic, as Fowler's solution, which are mostly given in fever and ague, when the quinine will not cure, for many skin diseases, or for cancers, applied both internally and externally, and aggravate the disease, which they generally do, give *Ipecacuanha*; and if this does not effect some improvement, give *Hepar*; if these remedies fail, or if, from the symptoms, *Nux vomica*, *Veratrum*, *Ferrum* or *China* seem to suit better, give one of these.

EFFECTS OF IRON.

Iron is frequently given in the form of steel drops, steel pills, bitter wine of iron, etc., for intermittent fever, chlorosis (green-sickness), and complaints of the lungs; but instead of curing those diseases it generally makes them much worse. When the menses are not regular, and in general, when patients are weak and pale, there are some who imagine, that the iron will enter the system and make them strong. Iron, however, taken in large quantities, as a medicine, is injurious, as well as all the other metals, only it does not kill quite so rapidly. A proof of this assertion we find in springs which contain iron, and in which rust is formed; neither man nor beast thrives upon this water; and even those who at last become accustomed to it, will sooner or later suffer from its effects. In cases where speedy relief must be afforded, give *Pulsatilla* or *China*, and if they do not avail, *Hepar*, and after some time the former medicines again.

In all cases of *poisoning by medicine*, it is necessary to look under the particular complaint, and to give in preference the medicines there recommended.

He who has already taken different medicines, and has become worse and worse by their use, will do well to lay them all aside, no matter what they are called, and should his health not improve of itself, nor from the medicines which have been recommended here, let him apply to a competent homeopathic physician, and, in view of all the existing circumstances, not expect miracles. It is often very difficult to give relief to the sufferer and in most cases it takes a year or more, before he begins to improve, provided he has no incurable disease, which neither the old nor the new method can heal.

CHAPTER VII.

ADULTERATIONS AND POISONS.

WILFUL murder and suicide by poison are but rare occurrences; most cases of poisoning originate in the carelessness with which poisonous things are handled, in the ignorance of their dangerous qualities, or in the wicked adulteration of catables and of liquors. With the necessary knowledge, we are frequently able to avoid this danger. As it is of importance to everybody to be acquainted with the poisonous substances which threaten life, we will give some directions, how these adulterations and poisons may be detected.

WINES are most frequently adulterated, and here more than elsewhere; those imported into this country have either been adulterated already by the shipper, that they might keep, or it is done here when they are near spoiling, or to make them resemble wines of better quality, or for other purposes. We will give directions how to recognize adulterated wines, that the honest dealers and venders of wines may be able to examine the articles which they purchase, and that all who have to deal with rascals may first test the wine. All those who, by the directions given below, shall discover that wine has been adulterated, and who have a spark of feeling for their fellow-men, should expose, without the least hesitation or forbearance, the persons so offending, that this horrible practice may be checked in this country. It is true, that the venders may excuse themselves by saying that they have bought the wine in that state. But the poison is there, and no one should deal in wine who does not know how to discover these adulterations, or who has not trustworthy people from whom he orders his wines. At all events it ought to be made known that he has been deceived, and particularly by whom.

Wines may be adulterated with harmless or noxious substances, and whoever employs the former will employ the latter, for the distinction is but too easily overlooked. The chief harmless articles used for adulteration of wine, are *water, sugar, brandy and various coloring matters*; but as these are not fraught with mischief to the health, we may pass them over and proceed to point out some adulterations which operate as slow poisons and which may be the cause of many diseases.

a) *Lime or Chalk* is often used to restore wine that is spoiled, or to give new wine the appearance and taste of old; this admixture is very injurious. It may be detected by taking a few grains of oxalate of ammonia, and dissolving them in two tablespoonfuls of distilled water, or in water obtained by letting the steam from the spout of a teapot, filled with boiling water, pass into a cold vessel. This solution, itself a poison, drop into a glass of

wine; if you perceive in a few minutes a whitish cloud in it, and the next day a white sediment, there is lime or chalk in the wine. All wine will become a little cloudy, but upon testing several different kinds, you will soon see which contains the most sediment. Drinking such wine frequently, is apt to occasion gravel, hardened glands, swellings, ulcers, sore eyes, obstinate headache, diarrhœa, etc.

b) *Sulphur or Brimstone* is often found in wine, and many pretend that wine will not keep without it. This, however, is erroneous, and much sulphur in wine acts as a poison, particularly with persons of a consumptive habit, or who are subject to bowel or liver complaints; in fact, it is injurious to every one who drinks it. The presence of sulphur may be easily detected by putting a clean new-laid egg into a tumbler, and filling it with wine; if the wine contains sulphur, the egg will be of a blackish color after remaining there over night, and well polished silver teaspoons will be blackened by the same process. Another test is, to drop a little lunar caustic, dissolved in water, into the wine; if a black or brownish-black precipitate is formed, the wine contains sulphur.

c) *Alum* is used frequently in adulterating wine for the purpose of brightening the tint and increasing thirst; a single glass will not unfrequently prove hurtful to a person of delicate health. Dissolve potash in water, filter it through blotting paper, and pour some drops of this solution into the wine; if it foams and precipitates a gray powder, there is a probability of there being alum in the wine. If you desire a more decisive proof, apply to a chemist, or, dissolve the above mentioned gray powder in sulphuric acid diluted with water, adding a small portion of sulphate of potash. Let it evaporate on a stove and crystallize. Should pyramidal crystals appear, of the sweetish, astringent taste of alum, the proof is positive.

d) *Lead, or some other metal*, is often found in sweet wines, sometimes also in other wines, and is a slow poison, worse than any other adulteration. —A nice taste will detect metallic poison in wine, the sweetness of which is disagreeable. Dissolve sulphuret of lime in water, and drop some of it into a glass of wine—if it turns brown or black, it contains metallic poison. Suspend a bit of polished zinc in the wine—delicate fibrils of lead will form upon it, if this metal is contained in the wine. Dissolve Glauber salts (sulphate of soda) in lukewarm water till it becomes saturated, let it cool, then pour into a tumbler half filled with wine, as much of it as will fill the tumbler, let it stand over night, and there will remain a white sediment from the lead. If you put into a glass of wine a few drops of sulphuric acid, and the wine becomes turbid and leaves a white sediment, it contains this poison.

e) *Corrosive sublimate*.—If you put a few drops of hartshorn into a teaspoonful of water, and put this mixture into a glass of wine and it leaves the least sediment, the wine contains corrosive sublimate. Another test is as follows: Put a gold coin on a piece of zinc, put both into a slit made in a small stick and hold the coin and zinc in a large tumbler full of wine.

Should a gray dust immediately appear on the coin, there is corrosive sublimate in the wine.

f) *Arsenic*.—Dissolve lime in water till the latter becomes saturated, then pour off what is clear into a clean tumbler, and drop some wine into it; if the wine occasions white clouds, it is likely that it contains arsenic. To convince yourself more fully, dissolve sugar of lead in aquafortis, pour a wineglassful of this solution into a bottle of wine into which a little harts-horn has been previously put, and shake it. The next day pour off what is clear, and with the turbid part wash the sediment well out of the bottle, and strain it through blotting paper, till the liquid has passed off; then put the sediment, after it has been dried on the paper, upon live coals; if it smells like garlic, arsenic is present.

It is not meant to imply that arsenic exists in the wine by the intention of the wine dealer or vender; but that vintners, who fumigate their casks with sulphur, are ignorant that the finest sulphur is apt to contain arsenic, which has remained in it from its original preparation.

VINEGAR is often adulterated. If you cannot have home-made vinegar, use cider vinegar, which may always be had pure. Wine vinegar often retains the poison of the adulterated wine, from which it has been made. Vinegar is generally adulterated by the addition of sulphuric acid. This you can discover by means of a solution of sugar of lead, which causes a white sediment. A corroding vegetable poison, called wood-vinegar, is also frequently used. Such vinegar will burn on the lips, which pure vinegar will not do; it also leaves an acrid taste in the mouth. You can ascertain it still more positively by dropping a solution of potash into the vinegar, until litmus paper dipped in it no longer turns red. Pure vinegar will then have lost its sharpness altogether, and only taste like salt or lye, while an adulterated article will retain a sharp and acrid taste.

MALT LIQUORS are frequently adulterated, but it is difficult to detect the poisonous ingredients, except by their pernicious effects. This is generally the case with the far-famed London brown stout and porter, which are occasionally adulterated with those deleterious substances, *Nux vomica*, Tobacco and *Cocculus indicus*. You may perceive this by a sudden intoxication and headache the next morning after drinking it, or by its producing nausea in a healthy person after drinking a tumblerful of it on an empty stomach. Any brewer who uses other substances in his beer than malt and hops, brews an injurious, even poisonous, drink; salt and sugar are allowable, but the effects of other substances will sooner or later be felt by those who drink the beer. It is an injurious deception to use bitter roots and herbs instead of sufficient hops and malt, and *Cocculus indicus* is nearly as bad as Arsenic. Alum and vitriol are sometimes used; how they may be detected we will show later under "Bread."

BRANDY AND OTHER LIQUORS sometimes contain poison, either through the fault of the distiller or not, particularly if the fermentation proceeds too rapidly or is continued too long. This you will perceive by boiling the brandy in a bottle put into a kettle full of water, over a slow fire, till all the spirituous parts are evaporated. An acrid, disagreeable taste proves the existence of poison; and experiments similar to those recommended for wines will show what it is. It is usually lead.

SWEET OIL is often adulterated with lead or copper. Dissolve liver of sulphur in water and mix the oil with an equal portion of this solution; if it turns brown or black upon being shaken, it is poisonous.

MILK AND ICE-CREAM are sometimes mixed with potash or lime; by adding some aquafortis, they will foam. When milk has been adulterated with starch, it will thicken in boiling; or if you strain it through fine linen, a sediment will remain behind, or a glassful of it will turn blue on the addition of a drop of the tincture of iodine. Sour milk may contain zinc from being kept in vessels made of that metal. Neutralize the whey by ammonia and add sulphide of ammonium, a white sediment shows the presence of zinc.

BUTTER often contains chalk, starch, flour, silicate of sodium, chloride of calcium or dye-stuffs. Melt it in hot water, and the foreign substance will be precipitated or mix with the water.

FLOUR is often adulterated with sand, chalk, bone-dust, clay, etc. Burn some of the flour or bread to ashes, and you will find them heavy and containing white grains.

BREAD. *a) By Potash.*—A trifling admixture of potash can affect only nervous, debilitated persons, but when there is much, it may prove injurious to the strongest—occasioning dyspepsia, diseases of the kidneys, etc. Pour hot water over the bread till it is quite covered and let it get cold; then put a strip of litmus paper into it, which has previously been reddened by being drawn through weak vinegar. If it turns blue again, there is much potash; the quicker it turns the more potash there is in the bread.

b) By Magnesia.—Magnesia is also used as an admixture to give to bread baked of bad flour, the appearance of good bread. This is principally injurious to children and to people of weak stomachs; you may perceive it by its taste being more or less bitter. Burn a pound of such bread to ashes, and you will find the magnesia.

c) By Alum.—Alum is a very pernicious substance, and frequently used. Some bakers make no secret of it, and mixtures of flour and alum, or alum and salt, are sold publicly, intended to make white bread out of inferior or spoiled flour, which is doubly detrimental to those who eat it, as spoiles

flour is of itself unwholesome. Some bakers do it without knowing that they injure the health of their customers. To detect this adulteration, soak the bread in water, knead it till it dissolves, adding enough water to make it thin, let it remain over night, then strain it, boil the water down and let it stand; crystals will be deposited and you can taste the alum.

d) *By Copper*.—Copper is the worst of all adulterations, and thousands had been poisoned with it by the bakers of France and Belgium, before the physicians discovered the imposition. When a baker furnishes bread uncommonly white, fine, large and heavy, you should be on your guard. When such bread is burned, the flame in places is green. To convince yourself perfectly, soak some pounds of it in water, and add enough to cover the whole completely, let it get sour and stand till it becomes clear. If you suspend a rod of polished iron in it, and this turns ever so little red, you may be sure that the bread is poisonous, and will seriously injure the health of any one who eats it.

We will now briefly call the attention of our readers to some other poisons, which ought to be known, that they may be guarded against.

OLD WELLS, caves, cellars, vaults, and particularly old privies, frequently contain air that is fatally poisonous; we ought, therefore, not enter such places without proper caution, but previously purify the air by lighted straw or gunpowder, or by chloride of lime, or chloride of zinc. The fumes of charcoal in a close room, or the exhalations arising from smouldering woodwork may cause the death of those who sleep exposed to these dangerous influences. The dry rot in a house, which gradually destroys the timber and walls, can cause dangerous diseases to its inhabitants. Buildings in this condition are not tenantable, and ought to be pulled down, unless the dry rot can be removed. Mildewed clothes even after being washed and cleaned are injurious. The odor of walls newly whitewashed, of paint in new buildings, or wherever much painting or varnishing has been done, particularly with poisonous green or red colors, consumes the pure, and engenders an hurtful air. Nothing that has a strong odor ought to be suffered in sleeping rooms, no drying clothes; no highly scented flowers or herbs; no fermenting substances, fresh hay, insect poison, or quicksilver—all of which will prove injurious to the sleeping—especially to children, and to women in confinement. For in sleep, man is more easily affected by noxious influences; and things which he would hardly notice when awake, or the injurious effects of which he would easily overcome, may affect him seriously, and even kill him while asleep. A person may become ill from sleeping on damp ground, exposed to a draught, in sunshine or moonlight, close to a hot stove, or in an atmosphere filled with odors of any kind. Bad air makes people sleepy. If small churches are not opened during the week, the whole assembly on Sunday will feel sleepy in spite of the best sermon. Persons who have just recovered from sickness are very apt to become ill again there, no matter with how good an intention they came to church.

WATER is often impure, and people get ill from using it. Springs which are avoided by cattle, and have a reddish or brownish sediment, are injurious. Whoever considers the loss of time which a trifling indisposition may cause to a whole family, will not deem that time lost which is spent upon improving the water supply.

Drink no water from rivers into which, a little higher up, manufactories discharge dye-stuffs and other noxious matters. Water containing sulphurous or salty particles, ought never to be used for drinking or culinary purposes, except in cases of the greatest necessity; for water of this kind cannot be improved by boiling. Stagnant water from ponds, pools, etc., ought not to be used; yet, when no other can be had, it may be improved by throwing into it powdered charcoal, shaking it well, and straining it through a double linen or cotton cloth; a good filter or drip-stone is still better for this purpose; such water contains putrid organic particles and eggs of insects scarcely visible, which occasion slow fevers and other diseases; it will avail nothing to mix it with vinegar, molasses or brandy, if it has not been previously purified by charcoal.

Bad wells ought to be thoroughly cleansed and kept covered; for the water is hurtful, when leaves or other vegetable substances are rotting in it. Pipes of copper, lead or zinc, used to convey water, render it injurious. One should always let as much water run out, as may have stood in the pipes. Pipes of marble, earthen ware, glass or gutta percha, are the best that can be used for conveying water.

MILK is often noxious, nay, poisonous, from disease of the cows—and dealers in milk not quite devoid of conscience, should rather sustain a small loss themselves, than subject others to a loss ten times heavier.

Distillers' slops, continually used, never fail to produce disease in the cow, and render the milk highly injurious to the health of the consumer. Cows, when fed for a length of time upon this innutritious substance, lose their teeth, and die.

CHEESE is sometimes poisonous, even when it is fresh, sweet—and savory. Every year many families are made sick by eating cheese, prepared like dutch cheese and sold by the pound. Dr. Jeanes believed this to be caused by rennet being used which is not well dried and is partly putrid. It has sometimes been supposed that zinc was found in cheese, when the milk curdled in zinc pans. The former poison cannot be discovered at all—the latter only by chemical analysis.

Poison is also generated in curds and cheese prepared too damp, or without a sufficient quantity of salt.

FLESH of sick animals, slaughtered when in a dying condition, is very injurious, particularly if the animal had any eruption, or disease of the bowels. The consequences may not appear immediately, but they are certain to come sooner or later.

Meat, badly smoked, or, when undergoing the smoking process, not kept constantly in the smoke, or during that process exposed to frost; sausages smoked badly or kept too long and which have become greasy in spots; hams, not salted sufficiently, or taken too soon out of the pickle, and smoked at intervals, or in the spring, when they get alternately warm and cold, or kept piled upon each other in boxes, or packed when damp—particularly when they are greasy around the bones, and have a bad, rancid smell,—contain a very violent poison, which, in many cases may be the cause of death or long-lasting disease. The same poison is also generated in hams and meat when preserved with pyroligneous acid, instead of being smoked. You can easily discover the poison which is developed in fat, or cheese, or old ham, by rubbing a portion of them on blue litmus paper, when, if the poison is present, the paper will turn red or reddish. The same poison is contained, though in smaller quantity, in rancid bacon, rancid butter, or rancid oil. It would be best to throw away everything of this sort—yet, if you must use it let it be well washed. This should be done first in cold water, then in three or four times as much boiling water; let it boil about ten minutes, take it out of the water, wash it again in fresh water, and try whether it still contains the poison.

Whatever has become putrefied—meat, eggs, cheese, fruit, particularly cherries, pine-apples, oranges, etc.—is hurtful, often poisonous, and nothing can be done to improve it. Meat, preserved in summer by ice, and which has acquired a certain red appearance, having no longer the proper smell of flesh, is very unwholesome food. Putrid fish, though ever so well dressed, is a very dangerous food.

The gall of every animal is a poison.

FISH, particularly shell fish are occasionally injurious. Lobsters, mussels and crabs, sometimes produce severe urticaria (nettle-rash).

VEGETABLES AND FRUITS of any kind should not be eaten by anybody who does not know them well; and children ought to be early accustomed to partake of no fruits, etc., unknown to them. It is often the case, that poisonous insects infest vegetables, (cabbage in particular,) or leave their slime on them, and consequently render them very injurious. Mildew which blasts vegetables, is also poisonous. Ergot, which is frequently found in rye, is hurtful to man and beast. Also the seeds of many weeds are noxious. Dry vegetables, containing insects and worms, ought to be carefully avoided. Nuts may taste sweet, and yet contain rank poison. Even walnuts become injurious, when old and rancid, and occasion in many a child a dangerous cough or diarrhoea, often ascribed to a cold.

Raisins, figs and prunes are a very good relish, provided they are perfectly sound. The unsoundness of these fruits is easily settled by a close examination, which will show that the white dust adhering to the fruit and resembling sugar, (though, in some instances, it may be sugar) proves to be

a beautiful little grove of coral, thronged by large, bristly animalculæ. No wonder, that with children diarrhoea is produced by such bristly guests. All such things ought to be carefully washed, first in cold and then in hot water before used.

No one should eat fruit which is half ripe on one side and rotten on the other, at least not without first cutting out whatever is spoiled. If proper attention was given to this matter, we should not be so frequently troubled with bowel complaints in childhood, and indigestion in after years.

MUSHROOMS are sometimes poisonous. The best precaution in regard to their use is, to eat none from which a milky juice exudes; none that are old or become rapidly decomposed. Highly colored ones, with an astringent taste and pungent odor, and which grow in dark, shady places, should be avoided. As to all others, make inquiry and learn which are eatable. Taste them raw, and if they have anything acrid or disagreeable either in taste or smell, do not use them. Let them be well washed in cold water, have them pared and all the gnawed parts cut out. When cut up, they should be scalded with boiling water, then allowed to stand awhile, and afterwards boiled in fresh water. It is not true, as has been alleged, that poisonous mushrooms cause onions to turn black.

KITCHEN SALT being an indispensable article, every family should endeavor to have it pure. When salt, exposed to the open air, becomes easily moist, it is bad. If an ounce of fine salt does not perfectly dissolve in four ounces of cold rain water, it contains plaster of Paris, and is injurious.

It is a great error to suppose that salt is absolutely wholesome, and that too much of it cannot be eaten. A small quantity suffices to make food palatable and is wholesome, but the excessive consumption of it, indulged in by many, is not only unnecessary, but even attended by great danger to the health. It causes dyspepsia, constipation, chronic catarrhs, skin diseases, etc., and many persons laboring under these affections, owe them solely to the immoderate use of this otherwise indispensable condiment. Most of the ordinary articles of food contain naturally a sufficient supply of salt in chemical combination with them, and when more is required, the cook should be entrusted with the seasoning, as salt is found to be less apt to produce its deleterious effects when combined with the food in the operations of cooking, than when added afterward. It is highly objectionable to dip every mouthful of food in salt, as we so often see done, especially in this country.

KITCHEN UTENSILS should be selected and used with care. Earthenware is often glazed with poisonous substances. Let vinegar stand in a vessel of this kind over night, and the next morning mix it with a solution of liver of sulphur in water, and if it turns black, there is poison in the glazing. Nothing acid should stand or be prepared in such a vessel.

Caution is to be recommended respecting iron utensils glazed inside. It is best to test them as above. Copper vessels ought never to be used in the preparation of anything that is sour; they should always be kept clean and polished, and whatever is *cooked* in them ought *not to be left in them to cool*, for while cooling it will be most apt to imbibe the poison.

The same precautions should also be observed with regard to tinned utensils. During the process of cooking, the tin should not be suffered to melt off; nor should the bottom of the vessel be scraped while stirring its contents with a spoon.

It is owing in no small degree to the neglect of these things, that we hear of so many slow and tedious diseases which no physician can cure. All those who are so ignorant, that they will use copper vessels for pickling cucumbers or beans, in order to give them a fine green color, and then eat such trash on account of its fine appearance, or who draw vinegar from casks by a brass spigot, must not complain when they suffer from a weak stomach, or colic, cramp, or nervous diseases; nor expect that a physician, by any medicine, can expel the copper out of the system as readily as it has been introduced. There are those who can bear it for a long time, yet the bad effects will inevitably follow earlier or later. The copper in its metallic state is not necessarily injurious when introduced into the body, but copper dissolved in vinegar is always poisonous. Coppersmiths are not more apt to be ill than other people, and a person ~~s~~swallowing a copper coin, gets rid of it without sustaining any injury. One may have a leaden bullet in their flesh for years without detriment; but the same lead dissolved and taken would destroy life in a few hours.

PAINTS are noxious, because they nearly all consist of injurious metallic substances. White lead and other white colors are nothing but preparations of lead, and are as bad if prepared from bismuth or tin. Minium is lead, and cinnabar is quicksilver. Massicot, chrome, Naples and other yellow colors are compositions of lead. King's yellow and orpiment are combinations of arsenic. Blue paints contain copper, or that virulent poison Prussic acid, as Prussian blue, Paris blue, mineral blue; or cobalt, which, though not as pernicious as arsenic, operates badly enough; it enters into the composition of smalts, king's blue, and blue starch. Green paints consist chiefly of copper, as verdigris, mineral green, Brunswick, etc. The chrome green is very hurtful, but Scheel's green is worse, because it contains arsenic and proves injurious even by exhalation. That it contains arsenic may be proved by strewing some on live coals, when it will smell like garlic.

Imitation gold and silver, which is used in gilding and silvering toys, is composed of copper, quicksilver, zinc, tin and bismuth.

Therefore be careful with such paints, do not let their dust fly about; never use paints containing arsenic, nor suffer any to come near the things that are used in the kitchen. To small children no paint boxes nor painted

wooden or leaden toys should be given, because it is actually putting poison into their hands; colored wafers may also prove injurious to children. Fine letter-paper, particularly that of a milk white or green tint, contains frequently injurious ingredients, sometimes arsenic, which is shown by the smell of garlic when it is burnt. Wall-paper is often colored a brilliant green; such a tint must be avoided, since arsenic is nearly always contained in the brightest and most beautiful shades of green.

Although mineral paints are the most poisonous, yet others also contain deleterious substances. Gamboge is a powerful cathartic. Indigo causes violent cramps and swellings. Cochineal causes toothache and difficult urination. And we might enumerate many others. However, where painting is to be done, use in preference chalk, dyed yellow with birch leaves or curcuma, or blue with indigo, or green with both; ochre and other iron colors; also woad, madder, orleans, cochineal and carmine.

In order to get rid of the smell of paint in houses that have just been painted, place in every room a basin containing unslaked lime, or a few buckets full of water.

OF COSMETICS AND WASHES we cannot speak with any qualification, as it is known that all of them contain poison and that of the worst kind. Cosmetics that are not poisonous will not keep long, and such as do keep are poisonous. There is but one true cosmetic: that is, fresh air and water, and a rational mode of living.

To induce ladies to leave off the use of these poisons, the following method will be found most effectual. Let them, after using paint, wash themselves in the dark with water in which some liver of sulphur has been dissolved. It can do no harm, and will have the desired effect.

HAIR DYES and so-called restoratives are exceedingly injurious to the brain. Insanity has been repeatedly caused by their use.

OIL of vitriol, aqua fortis, spirits of salt, aqua regia, salts of white sorrel (called also salt of lemons and used to take out spots) are dangerous articles, and should never be left within the reach of children. Concentrated sulphuric acid is exceedingly poisonous, diluted it is not so baneful; aqua fortis mixed with strong spirits is not very dangerous; but the others, however much diluted, operate as violent poisons. The smelling salts, common or caustic potash, lunar caustic, soda, hartshorn, salts of tartar or oil of tartar, unslaked and even slaked lime are dangerous substances.

The injudicious use of these things, given through ignorance in too powerful doses to sick or fainting persons, has been highly injurious, and, in some instances, even fatal. They ought never to be given to smell, or otherwise used, except much diluted. Alum, vitriol, saltpetre, sal ammoniac and liver of sulphur, used too profusely, are also injurious.

Not only things containing mercury, arsenic, lead and copper, are poi-

sonous, but also those in which there is antimony, tin, bismuth, zinc, lunar caustic (in short, almost everything that is bought at an apothecaries shop); all minerals and chemicals are more or less dangerous. Even things harmless in themselves, improperly used, may prove hurtful.

Hydrate of chloral, used so much by the old school for producing sleep, is injurious and has proved fatal in more than one instance. *Belladonna* may serve as an antidote. For the tedious consequences, *Sulphur*.

Chloroform and ether sometimes leave injurious effects, which are best counteracted by vinegar. If a remedy is required, give *Hyoscyamus*.

PANACEAS AND VERMIFUGES.—The worst and most injurious of all poisons are the abominable panaceas, nostrums, pills, etc., which, under numerous enticing names, are palmed upon the public. No physician will deny that sometimes cures have been performed by them, yet every one knows how seldom this has happened. No medicine will do good unless properly applied.

From the manner in which panaceas and other nostrums are extolled and recommended, it is apparent that those who offer them for sale are only anxious to find purchasers. Thus, pulmonary consumption is no fixed disease, against which a specific can be recommended. Its manifestations are so varied, and in almost every case so peculiar, that careful investigation is necessary to discover its nature. The remedies must be adapted to the peculiarities of the disease. One and the same medicine cannot possibly answer in all cases. Nor can you rely upon the certificates which accompany the recommendations of these universal medicines. A case often appears worse than it actually is, and even medical men may be deceived, while at the same time a trifling medicine, sometimes simply cold water, will cure it.

The great number of universal medicines which we see extolled as specifics for various diseases, certainly reflects no great credit on the inhabitants of this country. It proves the ignorance and credulity of the purchasers.

He who buys and uses such articles may be compared to him who buys a lottery ticket. The ticket vender is the only person certain of a large profit. As many blanks as there are in a lottery, so many are there in these universal medicines; and the number of prizes in the one and of cures in the other are about equal.

No man of sense will venture in a lottery, if he cannot well spare the money, which in all probability will be lost. But he who ventures in a medical lottery, not only loses his money, but if he does not get a prize, receives certain injury, rendering his case worse, more obstinate, and more difficult to cure.

When a physician prescribes medicine for you, you know at least what you get, and should it prove injurious, it may be counteracted; if you have not taken too much of such medicine, or persisted in the use of it for too long a time, it is always possible to repair the injury that has been done.

But with those unknown universal medicines this is impossible; because we do not know what we are to treat. Whoever relies upon the impudent assertion, that nothing injurious is contained in these nostrums, must be credulous, indeed. We have mentioned already in the preceding pages, that the poison from many plants is as virulent as that from minerals.

Many of these universal medicines contain also mineral poison. For instance, the colorless fever drops contain arsenic; the imperial pills, mercury; and so with many others. Many things of this kind are sold at an enormous price, and the ingredients of which they consist may be had in any apothecary's shop for a tenth part of their cost; for instance, Haarlem oil is nothing but a combination of sulphur and oil, and the value of a vial full is less than a half-penny. So it is with all others.

There is not a single one of these pretended secret medicines that a real physician might not have discovered and made known. A physician can apply every medicine in its proper place: the vendor of nostrums cannot—his object is to make money; whether his medicine kills or cures is a secondary consideration.

Beware of giving children the so-called worm medicines. Whoever is so inconsiderate as to fill the stomachs of his children with such trash, should first try these nostrums on himself, by taking a small spoonful every morning. It will soon cure him of his folly.

This remark applies, also, to remedies for vermin on the head. These remedies in general are poisonous. Cleanliness is the best remedy, and should frequent washing and combing not avail, rub oil or a little alcohol into the hair. Cleanliness will also exterminate all other descriptions of domestic vermin, therefore do not run the risk of having poisonous remedies in the house, for they often contain corrosive sublimate or something similar, and their very odor is injurious.

Camphor or even musk is frequently made use of against moths in fur and clothes, but their odor, especially in bed rooms, is very injurious. Camphor is, likewise, apt to effect colors, and the effects of musk continue even after it has evaporated. Pieces of Russia leather, lavender, thyme, spirits of turpentine, or tobacco leaves, will answer equally well.

Vermin in grain are more easily expelled by strong smelling plants, and frequent shifting, than by poison; and there are many instances, where, notwithstanding the utmost precaution, men have been killed instead of vermin.

CHAPTER VIII.

POISONING.

WHAT IS TO BE DONE IN CASES OF POISONING.

The main object is to expel the poison as quickly as possible and to prevent its action from spreading; or to render innoxious what cannot be expelled. Much depends upon promptness. Yet too much haste frequently leads to mistakes, and nervous agitation causes many to act without consideration.

The first requisition is presence of mind. Whoever is possessed of this, should act, and direct what is to be done. Let him dispatch the bystanders after what may be wanted, thus rendering those useful who would otherwise be worse than useless.

In most cases when poison has been taken into the stomach, the principal object is to excite vomiting, particularly when the sufferer feels inclined to it; or if vomiting has already taken place, to promote it. The best means of effecting this is by administering tepid water, and tickling the throat with a soft feather; a feather from the tail of a peacock is the best, on account of its length and softness; put some oil on it, push it down the throat, turning it now and then, until vomiting has been produced.

Let water be heated as quickly as possible; in the meantime take the white of eggs and beat them to a froth. Take pure white Castile soap and let suds be made. Let another person procure sugar, vinegar, sweet oil, milk and butter. Have some strong coffee made, and gruel of oatmeal, barley, linseed, or meal of any kind.

These articles are usually to be found in every household.

Whilst you are promoting vomiting and procuring what is requisite, ascertain, if possible, what kind of poison the sufferer has taken. Sometimes a sudden case of sickness is erroneously attributed to poison. Consider, therefore, what may be the most probable cause of the attack, and should any uncertainty exist, do not hurry yourself. You may do some thing at random without doing any injury; you will have to do this until you attain certainty.

There is reason to apprehend poison, when violent, dangerous symptoms, such as are indicated below, occur suddenly, particularly if these show themselves at once, or soon after the sufferer has been eating or drinking. The probability will be still greater, if the patient has eaten any thing unusual.

Be therefore diligent in inquiring of the sufferer himself, as well as of those about him, where he has been, with whom, and so forth. Preserve carefully what he has thrown up, and likewise whatever may have been

left of his meals or drink. Do not suffer these things to be thrown away, although they should become putrefied; for mineral poison can be traced notwithstanding, a matter which may prove interesting to the patient, or his relatives. Should this be a matter of importance, throw the whole together into one vessel, and pour plenty of strong brandy or alcohol over it.

As in every serious case of the kind, an experienced physician, or an apothecary, will no doubt be called in, let him subsequently examine these things.

The treatment must not, however, be deferred; the assistance must be immediate, and while it is being rendered, the cause must, if possible, be ascertained.

Always consider, that he who is poisoned may die, if you apply too many things, or proceed with too much haste or violence. Reflect, and do one thing after another quietly and soberly, lest by the means applied you hurt the sufferer more than you do him good.

When you know what poison has been taken, or when you are almost certain, have recourse to such medicines as are prescribed to antidote that poison, avoiding such as might prove detrimental.

When you are uncertain, act according to the following directions, proceeding from mild remedies to stronger ones, if the former prove insufficient. In cases of imminent danger you must, of course, use whatever remedy may be at hand.

VOMITING, or an inclination to it, is always a most important symptom, and especially so when occurring during, or soon after meals. It is right to promote vomiting, and this should be attempted at first, without having recourse to irritant substances. A good and a harmless emetic is lukewarm water, without either oil, grease or butter. Let the sufferer swallow as much of it as he possibly can; at least half a tumbler full, every minute and more if possible. Try to induce children to take it, first by kindness, then by threats, and if neither will avail, by force, and if the latter has to be resorted to, open the mouth by inserting a finger between the jaw behind the teeth, and pour it in. Or you may, after the child has made an expiration, suddenly shut its nose and pour the water into its mouth; but beware of doing this while the child is breathing in.

At the same time let the patient put his finger down his throat, or take a feather, put it into the throat, and turn it around until it excites vomiting. Let the patient incline forward, place your hand on his stomach, support his head, and beat him gently between the shoulders. Let him rinse his mouth after he has vomited, and remain undisturbed for a few minutes. As soon, however, as he feels another attack of pain, or other symptoms, such as retching, hiccough, or uneasiness, let him drink again until it appears probable that every thing has been ejected.

If he cannot be made to vomit, or if he cannot swallow, at least not sufficiently, or if he retches in vain, does not throw up as much as he drinks, or

should he absolutely refuse to drink, and you cannot introduce enough, or should he swallow again what has come up: give him a tablespoonful of mustard-seed, finely powdered, mixed with a teaspoonful of table salt in a tumblerful of water.

In case the sufferer can get nothing down, is quite confused, cannot swallow, his jaws being tightly closed, blow some tobacco smoke into the rectum. To do this if the proper apparatus cannot be obtained, take a pipe filled with tobacco, light it, grease the point of its mouth-piece with oil or fat, insert it within the anus, not deeper than about an inch, turning it carefully; then place on the bowl of that pipe the bowl of another larger, empty one, and blow through this into the other, propelling the smoke inward. After blowing three or four times, stop, and then begin again, and so continue until relief is obtained.

The next important remedy is the **WHITE OF EGGS**. Let the patient drink the white of several eggs beaten up and mixed with cold water. This will never do any harm and will certainly give relief, if the poison is metallic, or if the patient is suffering with violent pains in the stomach or bowels, feels as though he should purge, especially in cases of poisoning by corrosive sublimate, quicksilver, verdigris, compounds of tin, lead, alum or vitriol. Give the white of eggs freely and repeatedly, when the substance vomited is of a red or green color, when the patient has a metallic, coppery, or salt taste in his mouth; in general, when you suspect that he has swallowed verdigris, red lead, cinnabar, corrosive sublimate, etc. If the patient finds relief from taking white of eggs, you will continue it, and should he be affected with diarrhoea and pain in the rectum, give him an injection of water and white of eggs. Subsequently proceed according to the directions given below.

Another very important remedy, in most cases of poisoning, and applicable when the white of eggs is ineffective, is **SOAP-SUDS**. But for this purpose you must not take soft soap, nor any resinous hard soap, except in cases of the utmost necessity, nor any soap which is stained red, as this is done with poisonous ingredients, but the best white Castile soap. Dissolve this in hot water, and let the patient drink a tea-cup full of it warm every three or four minutes.

Soap-suds will only prove injurious when the poison itself was alkaline, such as lye or potash, soda, caustic potash, salt of tartar, oil of tartar, spirits of hartshorn, smelling salts, salts of hartshorn, sal volatile, lime, slacked or burned, and baryta (often sold as rat poison, under the pretence of not being injurious, because it is not arsenic), pearlash which is sometimes mistaken for tartrate of potash (soluble tartar). When the substance which the patient vomits, does not smell sour, but like lye; when blue paper which had become reddish from having been drawn through vinegar, is turned blue by it; when it effervesces upon aqua fortis or sulphuric or muriatic acid being dropped into it—in all these cases you must not use soap-suds, but substitute vinegar.

Soap-suds is an important antidote in poisoning by arsenic, lead, oil of vitriol, aqua fortis, all strong acids, and most metallic solutions. You may conclude that the poisoning originated from acids, when the mouth of the patient looks scalded, when blue paper dipped in what has been vomited turns red on the instant. Soap-suds is also applicable when a person has swallowed alum. It will also prove beneficial in poisoning by plants of a burning, acrid taste, exuding a pungent juice or milk; likewise in dangerous accidents from castor oil.

The *Calcined Magnesia* sold by all druggists is in many cases still better than soap-suds. Stir it in some water, give it in large quantities, repeating it as often as thrown up. It is particularly useful against acids and some metals as mercury, antimony, zinc, bismuth, and tin.

VINEGAR, as already mentioned, is an antidote against alkaline poison. As soon as it is ascertained by observation that the poison is of this nature, let the patient drink vinegar, and give him injections of it. Let him also drink slimy gruel which will excite vomiting. But vinegar is injurious after strong vegetable poisons, various salts, all mineral acids, arsenic, and particularly if the region of the stomach is painful when touched. On the other hand it is of great service in cases of poisoning by thorn apple, aconite, laudanum, mushrooms, all narcotics, carbonic acid gas, and liver of sulphur. In such cases give alternately gruel, excite vomiting, and subsequently, after having vomited freely, let the patient drink vinegar again, which will remove the inclination to vomit. Vinegar also answers against poisonous mussels and fish. It is an important antidote against the poison generated in fat. If a person feels sick from having eaten spoiled ham or sausages, and his throat is very dry, and he feels nausea, hasten to give him vinegar to drink, not forgetting, however, the remedies aforementioned.

SWEET OIL is a remedy by far too generally applied; it is supposed to be a principal one, but is not. The same is the case with grease, butter, and similar things, as butter-water. Attention should be paid to the kind of oil used. Rancid oil, train oil, or sperm oil, ought not to be applied. Slimy substances will answer far better to envelop the poison, or sugar, which sooner soothes the stomach; or other means to neutralize the poison. When you are sure that the poison is alkaline, and you are applying vinegar successfully, you may alternate with cream or sweet oil, particularly when the patient complains of burning in his mouth, throat or stomach.

Oil, however, may be applied to great advantage, when a strong acid, aqua fortis, oil of vitriol, etc., has got into the eye, the mouth, the throat, or the stomach. Sometimes it is of service against poisonous mushrooms.

Oil is injurious in poisoning by arsenic; useless in most poisonings by metallic substances, and very injurious when cantharides (Spanish fly) has got into the eye or the stomach. It is literally pouring oil into the fire. This is also the case with insects and venomous bugs, which may have got

into the eye. Oil, on the contrary, is of great service when live insects have crept into the ear.

MILK is not so good as slimy substances; but as it is more frequently at hand, it will do well to let the sufferer drink it, instead of waiting for other things. Rich milk is good wherever oil is good, injurious wherever that is injurious. Sour milk or butter-milk is good wherever vinegar is so; injurious wherever that is. When you have no good oil, rich milk is the next best thing; also when oil becomes disgusting to the patient. Sour milk is preferable to bad vinegar; it may also be applied where vinegar has already been used. Milk is very good when the first paroxysm has subsided, and still some pain remains, provided the patient likes it, and feels revived by it. When you cannot ascertain what kind of poison the sufferer has taken, and you cannot, therefore, choose between the antidotes, but have given milk in the first instance, and the patient feels better after it, you may continue with it, on condition, however, that the patient has vomited at the outset so much, that you may suppose the poison has been ejected.

SUGAR, or sugar water, is in most cases one of the very best remedies. Only when you are certain that the poison is a mineral acid, or strong alkaline poison, prefer the remedies prescribed against such poisons. It cannot do much harm, were you to apply sugar improperly. If the person who is poisoned has a craving for sugar, give him as much as he desires. It is a good antidote against metallic poisons, poisonous paints, verdigris, copper, tin, vitriol or alum; continue with it, if the patient finds relief from it; should he, however, not feel better, alternate with white of eggs and sugar; or, where it is applicable, with soap-suds. Against arsenic, sugar is also a principal antidote. When the poisoning has been effected by sharp acrid plants, which occasion a burning or swelling in the mouth, or in the throat, you may give sugar upon other things, letting the patient either put it into his mouth, or giving it to him in water.

COFFEE is an indispensable antidote in many cases of poisoning. You must be careful that the coffee has not been spoiled in roasting; give it at first very strong, and then somewhat weaker. In the intervals, do not neglect to excite vomiting, should it be still required. When the poison is unknown, coffee is the best thing you can give; when the patient is stupefied, sleepy, senseless, giddy, as if intoxicated, his face red and full, or pale, cold and cadaverous; or when he acts as if he were delirious or raving,—in all these cases, give him plenty of strong coffee, without milk, excite vomiting, and administer injections of coffee, till he gets better. Even after he has vomited the whole contents of his stomach, continue giving him the coffee with sugar. In *all cases of poisoning*, give *coffee*, if the patient desires it.

When the poison is known, and the tepid water intended to bring on vomiting, and tickling in the throat for that purpose have been resorted to, give coffee in abundance, as a drink and in injections, particularly when the poison contained Prussic acid, which you will know from its smelling like bitter almonds, or peach kernels, or peach brandy. Also against laudanum, opium, morphine, or stramonium, poisonous mushrooms, etc.; when a person has swallowed the juice of sumach, or when dangerous symptoms appear after medicine containing belladonna, colocynth, valerian, conium, cicuta; or after chamomile tea. Coffee is also important in cases of poisoning by wine of antimony, or when antimony, phosphorus or phosphoric acid have been swallowed, and particularly from poisoning by nux vomica and strychnine.

CAMPHOR is a principal antidote in all poisonings by vegetable substances, and particularly, sharp, acrid, burning poisons, which cause inflammation and redness; in all cases of poisoning, if the patient suffers from vomiting and diarrhoea, is pale, cold as ice, and almost senseless; in such cases, if you do not know what kind of poison has been taken, you should give camphor by preference. It will often suffice to let the patient smell it, or it may be rubbed on his skin, or given by drops on sugar. You can make a salve of it with warm oil, or easily dissolve it in heated brandy.

Against cantharides (Spanish flies), whether they have been swallowed, or got into the eye, or used as a plaster, and they have produced poisonous effects, camphor is always the best remedy. Also when venomous insects or poisonous honey has been swallowed; for swellings or poisoning caused by hairy caterpillars; for violent symptoms after eating food, in which small bugs or worms may have accidentally fallen, or when small moths have been swallowed—likewise in alarming symptoms caused by the sting of insects.

When, together with the other symptoms, the patient finds it difficult to make water, or it is very painful to him, and the urine is intermixed with blood and you have cause to think that this originates from Spanish flies or other insects, camphor is the best remedy.

Camphor, finally, is applicable to diminish the effects which medicine may have produced; when children fall sick after taking the usual preposterous worm medicines, in accidents from tobacco, bitter almonds, and medicines that have the smell of these things, or cherry stones, peach kernels, or nuts.

It is very useful for the pains left by the use of phosphorus, from poisoning by minerals, or acids, and particularly salty things. When everything has been ejected from the stomach, let the patient smell camphor from time to time. This may also be done in poisoning by mushrooms, or in accidents caused by inhaling the fumes of coal or charcoal.

The ingredients sometimes requisite, such as charcoal, lye, kitchen salt,

starch, green tea, tobacco, are in most houses; the other things often as necessary, such as magnesia, spirits of nitre, spirits of hartshorn, ought to be kept likewise, being useful not only in cases of poisoning, but in many other diseases. In cases of poisoning, things of this kind can only be serviceable if the poison is perfectly known. They will be mentioned in their proper place.

From the preceding remarks it is evident, that, in cases of poisoning measures ought to be immediately adopted :

1st. To excite vomiting.

2d. To lessen the effect of the poison.

At first you will have to attend to both alternately, subsequently to the latter object only.

The usual emetics are themselves poisonous, and may consequently prove injurious; it is, therefore, best to excite vomiting by the following means: Drinking lukewarm water, as much and as often as possible.

Tickling the throat; and only when this proves ineffectual—

Snuff put upon the tongue; or in cases in which this has no effect,

Ground mustard with salt in water; and only in cases, where nothing can be introduced into the mouth.

Injections of the smoke of tobacco.

But if the symptoms are very urgent and it is thought advisable to empty the stomach as soon as possible, the stomach-pump must be used.

The principal remedies to lessen the effects of the poison, when it is unknown, are, if there is great pain, water and the white of eggs—if insensibility predominates, coffee.

As soon as it is ascertained that the poison is an acid, give magnesia in water or soap-suds; if a metal, white of eggs or soap-suds; if an alkali, vinegar and water and lemon juice, or juice of sour fruit.

All other remedies are only applicable when you know what kind of poison you have to deal with.

TREATMENT WHEN THE POISON IS ASCERTAINED.

Generally, the aforementioned rules hold good; besides attending to the vomiting, however, administer immediately the remedies here recommended.

The antidotes recommended against each particular poison have been arranged according to their efficacy, the most efficient being mentioned first. When these are not at hand, give what can be first procured. If a person, for instance, has swallowed sulphuric acid, it would be folly to wait until magnesia or white soap could be brought from the apothecary; when these cannot be had on the spot, take a handful of wood ashes, stir them in water and let this be drunk immediately, although it will not answer as well.

I. POISONING BY INHALING GASES AND BY SUBSTANCES INTRODUCED INTO THE STOMACH.

1. POISONOUS GASES; ANTIDOTES AND TREATMENT.

a) *Gases produced in places deprived of a current of fresh air.* In deep privies that have not been cleansed for a length of time; in places deprived of a current of fresh air, where offal of animals is suffered to decay, a poisonous gas of a foetid, offensive smell, resembling that of rotten eggs, and in which polished metal, particularly silver, turns black, is generated.

Such gas inhaled will cause nausea, nervousness and difficulty of breathing; the pulse becomes intermittent, there is an expression of languor about the eye; a coldness is felt in the ears; the abdomen is contracted, and unless the sufferer is speedily removed from its influence, convulsions and apparent death ensue, which latter, if no medical aid is afforded, will terminate in actual death. The best disinfectants are chloride of lime, or chloride of zinc.

Before persons expose themselves they should provide chloride of lime, some of which, diluted with water, will destroy the foetid gas, and enable them to work in such places without danger. The bad smell is lessened but not so speedily removed by throwing in a few shovelfuls of quick lime at intervals for several days.

A person who has become insensible by inhaling this gas, should immediately be brought into the fresh air, undressed, and placed on his back, with the chest elevated, and cold water thrown plentifully on his face and chest. If you have a solution of chloride of lime in water at hand, dip a sponge in it, and hold it occasionally to the nose. The solution should be so weak, as not to excite cough in a healthy person who inhales it. Put a tablespoonful of the strong solution into a tumblerful of water, and put half a teaspoonful of this into the mouth of the sufferer, repeat it every five or ten minutes until the patient begins to revive, then at longer intervals.

If vinegar can be had sooner, mix this with an equal portion of water, and sprinkle the face with it—and hold a sponge dipped in vinegar before the nose and mouth.

During this time the patient should be rubbed with hot flannel. If his face has been sprinkled with cold water or vinegar, wipe it dry after a little while; then rub it with hot flannel, and repeat the sprinkling. The feet, abdomen, chest, and arms particularly, ought to be well rubbed. The soles of the feet and the back may be brushed a little with a stiff brush.

If the patient has not returned to consciousness by this time, follow the directions given for applying the method to produce artificial respiration, under the head of "Apparent Death from Drowning," or those given below.

Be not too hasty, but proceed gently and perseveringly. Life sometimes does not return in less than three or four hours.

If the patient, apparently dead, does not breathe at all, it is useless to hold a sponge before his nose; only try from time to time, while employing artificial respiration, by holding a light feather there, whether his breathing has recommenced. Occasionally blow air into his mouth, which is best done by a person inhaling as much as he can, and then placing his mouth to that of the patient (whose nose should be closed), blow in the air gradually. If this expands the chest, let the breath pass out by itself, and repeat the operation. If the breath will not pass out, compress the chest in the manner recommended under "Apparent Death from Drowning."

By thus producing an artificial respiration, a person apparently dead may often be restored again, but he who undertakes the operation should himself be healthy, and have a sweet breath, and either drink some vinegar, or rinse his mouth with it occasionally. As soon as the patient makes an attempt at drawing in his breath, or at exhaling it with a sigh, discontinue these efforts, and gently fan fresh air toward him, and when the breathing becomes stronger, hold a sponge to his mouth, dipped in a very weak solution of chloride of lime, or vinegar.

Care must be taken, indeed, lest you extinguish the feeble life which is just returning. If the patient recovers, give him a few drops of a weak solution of chloride of lime or vinegar on his tongue. If he complains of cold, inclination to go to stool, of nausea, and vinegar will not remove these symptoms, or if he is getting tired of the vinegar, give him a little coffee without milk. If he complains of heat and great weakness, give him a little good old wine, and afterwards *Cinchona*. The smell of camphor too is often beneficial; in this respect consult the wishes of the patient; whatever is most agreeable to him, or affords him relief, deserves the preference.

Another poisonous gas, which is suffocating, is generated in deep wells, vaults and lime furnaces. It has not the bad smell of the gas above mentioned, but causes sleepiness, giddiness, and at last loss of consciousness; persons affected by it will usually revive in a short time, by bringing them speedily into the open air, sprinkling them with cold water and vinegar, and pouring coffee into their mouths. Do not act with too much precipitation—delay is not so dangerous in such a case. If respiration does not return, it will be necessary to inflate the lungs, by breathing into the mouth, or by applying the other method of artificial respiration.

b) *Gas generated by charcoal*.—The gas arising from charcoal is a most dangerous poison, particularly to persons sleeping. Never sleep with lighted charcoal in a room which has not an open fire-place. The same applies to coal. Old woodwork too, has been known to smoulder for days, without any smoke being perceptible; the inhabitants of the house, paying no attention to the somewhat smoky smell, have been found dying before the smouldering was at all perceptible.

It is remarkable that all persons who are exposed to this gas, become so feeble as to be unable to go into the air, to open doors or windows, or to call for aid. They suffer much and know the danger, but cannot make the effort to move from the spot, in order to save themselves. A similar sensation effects those who, in extremely cold weather, sit down in the open air to rest themselves, though they know the fate that is before them, they lack energy to resist it.

The symptoms of poisoning by gas produced from coal and charcoal are, if animation is not yet suspended, headache, with nausea, retching and vomiting—sometimes of blood; a heavy burden seems to oppress the chest, the face becomes red, and at last purple and bloated, the patient is seized with involuntary and hysterical weeping, talks incoherently, falls down suddenly, is seized with convulsions, finally becomes perfectly unconscious, and is seized with apoplexy.

Carry the patient into the fresh air, rub him with vinegar, and let him inhale the vapor of vinegar. If the face is already very red, and he begins to rave, pour ice-cold water on the head. In general, it is well to make cold applications to the head, and warm applications to the feet, and as soon as the patient can swallow, to give some coffee without sugar and milk. When the patient has somewhat recovered, it is well to give *Opium*, and to dispense with the vinegar. If *Opium* gives relief, but only for a short time, repeat it. After several hours, or sooner, if *Opium* does not seem very efficacious, give *Belladonna*, and allow it sufficient time to operate. If the patient is very much excited, talks much and rapidly, complains of shooting pains, or if it seems to him as if he were flying, and he feels giddy when lying down, give him a little coffee without milk, and continue it until the symptoms require *Belladonna*, *Nux vomica* or *Aconite*.

c) *Dry rot in old buildings*.—The effect produced by dry rot in old buildings, is similar to that produced by charcoal fire, only it acts more slowly. It is better if possible to quit such houses, or to rebuild them; but, if people have to live in them, they should try to destroy the dry rot by means of charcoal powder. Place as much of this as possible, above, below and around the spot where the dry rot appears. The spots themselves may, from time to time, be washed over with a strong solution of blue vitriol (sulphate of copper), or still better chloride of zinc. To guard against the effects of dry rot, take from time to time a little rain water into a gallon of which a few drops of sulphuric acid have been put; of course the homœopathic preparation of sulphuric acid is better and should be used if it can be obtained.

d) *Chlorine gas*.—To obviate the bad effects of the gas produced by chloride of lime, to which many persons are exposed, smoking tobacco is the best preventive; or you may drop some strong brandy, rum, or spirits of wine on a piece of loaf sugar, and take it in your mouth. The tobacco, however, is to be preferred.

If so much of this gas has been breathed as to cause pain in the throat

and chest, a sense of suffocation and coughing, let the patient smell liver of sulphur; it must be used cautiously, and only repeated as often as the pains return. If it cannot be obtained, the smell of a rotten egg will answer.

e) *Prussic and mineral acids*.—For the effects caused by inhaling the poisonous vapors of Prussic acid or mineral acids, the best remedy is spirits of hartshorn; but by no means apply the vial containing such spirits close to the nose; this would only increase the evil; rather move it slowly to and fro, at the distance of about six or eight inches from the nose and mouth, so as to smell it very faintly, and repeat this as often as necessary, or put a few drops upon paper, and introduce the paper into a large empty bottle, and smell the bottle from time to time.

Whether the vapors are from acids or from alkalies, may be discovered by litmus paper. Acids will turn it red, alkalies will turn that which has been turned red by acids, blue again. In cases of poisoning by acid vapors, you may put one drop of spirits of hartshorn into a tumblerful of water, and give of this mixture a teaspoonful every ten minutes. In poisoning by vapor of alkalies, give from time to time a teaspoonful of vinegar.

It is very injurious to sleep in rooms which have not been ventilated, or which have been shut up for a long time. The air has then become stagnant and putrid—we may almost compare it to the water in standing pools—and produces nightmare, frightful dreams, visions, depression of spirits, and fearfulness approaching to horror. The best preventive is proper ventilation, not by opening the windows merely, but by introducing a strong draught of air, increased by the waving of towels, or a blazing fire in the fireplace. Water placed in shallow vessels about the room will likewise answer. But, if the purification has been neglected, and these consequences mentioned ensue, give *Aconite*; for horror, *Opium*; for continual fear and shuddering, *Veratrum*; for headache and other effects arising from sleeping in an apartment, where there were flowers emitting a strong scent, or from sleeping on new hay, fresh air and cold washing will be good, and also the administration of *Nux vomica*, or smelling camphor.

In complaints caused by sleeping in rooms which have been recently white washed, or where clothes have been hung up for drying, or where a large quantity of clothes has been kept after being dried, or where many growing plants are standing in a confined place, and where fruits or vegetables are stored, *Bryonia* will generally be beneficial, sometimes *Belladonna*. See also "Headache."

If the painting of houses, rooms and furniture, has produced complaints which do not disappear upon going into the open air, or after washing with cold water, *Aconite*, *Bryonia* or *Sulphur*, will prove beneficial, and sometimes *Opium*; if it has produced pains in the bowels, nausea and vomiting,

worse when moving, give *Mercurius*. It is well to put a tub of cold water into the bedroom; the water should be renewed every evening. It will absorb the poison. Or a few dishes full of unslaked lime placed about the house, will soon remove the disagreeable smell. In general, painting ought to be done in autumn only, and when the weather is dry and cool; for the smell will then soonest disappear, the paints adhere better, become dry sooner, and are less liable to be spoiled by insects and dust.

Most kinds of bad smell, which sometimes fill a room or even a whole house and which cannot always be avoided, as for instance from a concealed dead rat, or from a sick person, are most readily and surely destroyed by the vapors of *roasting coffee*. Heat a common fire-shovel over a fire, put upon it a few raw coffee beans, and as soon as you see vapors arise from the beans, carry the shovel about the room or whole house. The purifying effect of even a few beans is really surprising; the usual perfumeries, smelling-salts, etc., are of no use; they merely conceal the bad smell, but do not destroy it. Chloride of lime is not so effective and is injurious to many persons; charcoal is far better and should be used freely. You need not dread interfering with the effects of the homœopathic remedies by the vapors of coffee; if their effect is weakened, repeat the medicine.

2. POISONING BY MINERAL AND OTHER STRONG ACIDS—THEIR ANTIDOTES AND TREATMENT.

In cases of poisoning by sulphuric acid or oil of vitriol, muriatic acid or spirits of salt, nitric acid or aqua-fortis, aqua-regia, oxalic acid, phosphoric acid, acetic acid, wood-vinegar, or too much strong vinegar, the symptoms are a sour, burning taste and smell, a burning, acrid heat in the throat and the stomach, acute pains in the stomach and intestines; drinking increases the pains—the breath soon becomes offensive; the matter vomited tastes very sour, ferments, and blue litmus paper dipped into it turns red; frequently the inside of the mouth looks as if scalded and marbled. In this case give:

1. Tepid soap-suds in great abundance.
2. Carbonate of magnesia—a spoonful in a cup of water—after every fit of vomiting, or repeated when the pains increase. Calcined magnesia is not so good as common magnesia.
3. Chalk—powdered and mixed in a tumblerful of warm water.
4. Wood-ashes—a spoonful mixed in a tumblerful of warm water.
5. Carbonates of potash or soda (except where nitric or oxalic acid have been taken)—dissolve as much as will lie upon the end of a knife in a large tumbler of warm water.

Give Nos. 1 and 2 alternately; the others are intended merely as substitutes until the former can be procured.

After the patient has vomited sufficiently, let him drink gruel or barley-water, decoction of linseed or rice, or any thing else of a mucilaginous character that is at hand, and let him use nothing else for several days.

In constipation and ineffectual urging to stool, give injections of weak suds. When the worst is past, give after sulphuric acid, *Pulsatilla*; after muriatic acid, *Bryonia*; after nitric acid, *Hepar*; after phosphoric acid, *Coffea*; after other acids or wood-vinegar, *Aconite*. If the patient does not speedily recover, particularly if respiratory trouble remain, let him drink copiously of weak soda-water for several days.

When strong acids have got into the eye, oil of almonds or fresh unsalted butter should be freely applied to it; occasionally you may apply chalk, mixing it previously with water until the latter assumes a curdled appearance. Pure water is injurious, and should not be used to wash the eyes with until later.

For an external scald or burn with strong acids, lime-water is good, or a salve made of lime-water and sweet oil.

3. ALKALINE POISONS—THEIR ANTIDOTES AND TREATMENT.

Pot and pearl-ash, caustic potash, lye, carbonate of potash, soda, ammonia, hartshorn, salvolatile, smelling salts, burnt and unslaked lime, may be known by their alkaline, urinous, acrid taste; and in vomiting caused by them there is no fermentation of the substances ejected; litmus paper which has been turned red by acids becomes blue again by being dipped into them; the symptoms are nearly the same as from acids, with the exceptions mentioned above, and what is vomited is not sour.

1. Stir two tablespoonfuls of vinegar in a glass of water, warm, if you can, and give a tumblerful of it every five minutes. 2. Lemon juice or other acids, but greatly diluted—or sour fruit bruised in water. 3. Sour milk or butter-milk. 4. Mucilaginous drinks and injections. 5. Oil, particularly that of sweet almonds. 6. Tartaric acid lemonade, when potash has been taken.

Emetics are dangerous, and vomiting should only be excited by the above-mentioned drinks, and by tickling the throat with a feather.

In poisoning with carbonate of baryta (a peculiar kind of heavy, white earth, which is sometimes sold as ratsbane), pure vinegar is injurious; in this case give merely mucilaginous drinks and oil, and endeavor to excite vomiting, until you can procure Glauber's salts (sulphate of soda,) or Epsom salts (sulphate of magnesia), which should be dissolved in lukewarm water and freely taken much diluted. Afterwards let the patient occasionally smell of camphor, or if this is of no use, sweet spirits of nitre. After poisoning from potash, give *Carbo vegetabilis*; after hartshorn, *Hepar*.

4. OTHER SUBSTANCES WHICH HAVE A POWERFUL EFFECT— ANTIDOTES AND TREATMENT.

a) *Liver of Sulphur*.—To counteract the effects of liver of sulphur, give water, oily, mucilaginous drinks and injections, mixed with a weak solution of chloride of lime, as long as the breath exhales the odor of sulphuretted

hydrogen. If drinking warm water and tickling the throat does not produce vomiting, give a weak solution of salt in water. After the patient has done vomiting, and the breath has no longer the sulphurous smell, give vinegar if it relieves; if not, give *Belladonna*, and discontinue the vinegar.

b) *Iodine* is often given as a medicine, although it sometimes produces sudden and dangerous effects. To remove these effects, give:—1. Starch stirred in water; 2. Paste made out of starch; 3. Wheat flour, and afterwards thin mucilaginous drinks, or sugar-water in great abundance; 4. Vomiting should be promoted by drinking a weak solution of carbonate of soda, and tickling the throat with a feather. For the remaining symptoms, give *Hepar*; sometimes *Belladonna*.

c) *Phosphorus*.—Oil and fat of all kinds, when given for the bad effects of phosphorus, are dangerous, because in them phosphorus is soluble. Excite vomiting as quickly as possible, and give mucilaginous or albuminous drinks, and afterwards give coffee without milk. Some hours later pour water on calcined magnesia, shake it and let it settle; drinking freely of this water will relieve the pain; it is best to use the magnesia stirred into eight times its bulk of chlorine water. If neither this nor the smelling of camphor gives relief, give *Nux vomica*. If the patient desires it, give a little good old wine or brandy, but only a few drops on sugar.

d) *Alcohol*, or strong spirits of wine and ether, taken inadvertently, may produce dangerous consequences. Excite vomiting and give large injections of salt and water, in case the symptoms are serious. Generally, however, it suffices to give milk and mucilaginous drinks. If these do not answer, give a drop of strong hartshorn in a glass of sugar-water, a teaspoonful at a time. Pour, also, cold water on the head, and place wet towels on the region of the stomach. If this does not give relief in a short time, give *Nux vomica*, and, as long as the stomach can bear it, mucilaginous drinks. Afterwards, coffee without milk.

e) *Prussic acid*.—Known by the smell resembling that of bitter almonds. It operates so rapidly that you must lose no time in administering the proper remedies. In such a case there is no time to excite vomiting. In severe cases immediately bare the patient's neck and back, and pour cold water continuously on the head, neck and spine, till consciousness is regained—afterward and in less serious cases proceed as follows: Let the patient smell spirits of sal ammoniac, held at a little distance. Drop a little on a handkerchief, and hold it so that only a faint exhalation may reach him. Or, put a drop of it into a tumblerful of water, stir it, and give him a teaspoonful of it every three to five minutes. As soon as you can, get coffee made, give plenty of it to drink, and also in injections, and let it be drunk at intervals for several days. If no other remedies are near, let the patient smell camphor or vinegar, and inhale the vapor. Afterwards give *Ipecacuanha*; and if this does not remove all the symptoms, give *Nux vomica*.

f) *Alum*.—Give soap-suds or sugar-water, mixed with calcined magnesia, until vomiting ensues; afterwards *Pulsatilla*, or *Veratrum*.

g) *Vitriol, white, green and blue*.—Give sugar and warm water, or the white of eggs dissolved in cold water, until the patient has vomited several times; afterwards give mucilaginous drinks.

h) *Salpetre and Sal Ammoniac*.—Give tepid water or melted butter mixed with water, until the patient vomits copiously; then plenty of mucilaginous drink.

i) *Bichromate of Potash*.—Beautiful red crystals, very poisonous. Use emetics and magnesia, or chalk. Acetate of lime or liver of sulphur in small quantities are said to be antidotes. For after-effects give *Hepar*.

5. METALLIC SUBSTANCES—ANTIDOTES AND TREATMENT.

a) *Arsenic*.—Arsenic is contained in ratsbane, fly-stone, cobalt, king's yellow and orpiment; in fever drops, salves and plasters for cancers, and numerous secret remedies, particularly in those for horses and cattle. In cases of poisoning with arsenic give: 1. White of egg and water. 2. Sugar-water. 3. Soap-suds. 4. Milk. Next give mustard to produce vomiting, if it has not already occurred freely. As soon as the patient has vomited, give again one of the antidotes. The danger is not as great when there is free vomiting. A kind of iron rust (hydrated peroxide of iron), which would have to be newly prepared in a drug store, is the best antidote; it may be given freely for it is harmless; or a spoonful of iron rust may be given, stirred in hot water. If neither of these are at hand, magnesia not too highly calcined can be substituted. When the stomach has been thoroughly emptied, give a large dose of castor oil to free the bowels of any poison that may have entered them.

After the poison has been got rid of, as far as practicable, give *Ipecacuanha* several times; if the patient still feels very uneasy and irritable at night, is also feverish, *Cinchona*; if he is worse during the day, after sleeping—if he is constipated, or has slimy diarrhoea, *Nux vomica*. If *Ipecacuanha* leaves frequent nausea, vomiting, with heat or cold, and great weakness, *Veratrum*. For other after-effects take *Hepar*.

The liquid which hatters use in the manufacture of fine hats, sometimes contains arsenic. The wearing of such hats sometimes causes eruptions on the forehead, or sore eyes. To prevent this, have the hat well lined with silk and leather, and for the bad effects take *Hepar*. Green paint, green carpets frequently, and green wall papers almost always, contain a compound of arsenic and copper which often occasions symptoms of arsenical poisoning, which will require *Hepar* for their removal. Some composition candles also, are prepared with arsenic, which renders them unwholesome.

b) *Corrosive sublimate*.—For this poison give: 1. The white of eggs in water. 2. Sugar-water. 3. Milk. 4. Wheat flour in water. 5. Magnesia. 6. Endeavor to promote vomiting.

White of eggs in water is the principal remedy; it may be given alter-

nately with sugar-water. The remaining symptoms require the same treatment as those from poisoning by mercury. See "Mercury."

c) *Copper, Verdigris*.—For these, or any other preparations of copper, give: 1. White of eggs. 2. Sugar—either with or without water. 3. Milk. 4. Mucilaginous drinks. Vinegar is injurious. The white of eggs is the best known antidote. The action of copper is so rapid that no time should be lost in separating the white from the yolk, but the entire contents of a number of eggs may be given stirred in a little water.

d) *Lead*.—In poisoning by lead, give: 1. Epsom salts (sulphate of magnesia). 2. Glauber's salts (sulphate of soda). The first is the best; when it cannot be had take the second. A tablespoonful should be dissolved in a pint of warm water, and drunk in abundance if much of the poison has been taken. 3. White of eggs. 4. Soap. 5. Milk. Vomiting should be excited as speedily as possible.

After the salts or soap give mucilaginous drinks and injections.

For pains, *Opium, Belladonna, Nux vomica, or Glonoine*. For the chronic complaints caused by lead in those who have anything to do with lead-paint, or of those who live near lead-works, use, besides *Opium* and *Belladonna, Platina*. Small doses of alum are also useful. A good preventive for those who work in lead-works, is a lemonade made with sulphuric acid, one or two drops of it to a tumblerful of water.

Poisoning by lead occurs very often from sour victuals being left in tin vessels, for tin is nearly always mixed with lead. Things that are sour or sourish should never be allowed to cool or to remain in metal vessels, nor should silver, tinned or tin spoons be left in acid foods. Sour things should only be kept in woodenware, stoneware, porcelain or glass.

e) *Nitrate of Silver, Lunar Caustic, Lapis Infernalis*.—Give common salt dissolved in lukewarm water, a teaspoonful in a cup of water; drink of this freely; also milk and mucilaginous drinks. For the remaining symptoms give *Arsenicum, Kali hydrojodicum* and *Natrum muriaticum*.

f) *Antimony*.—For poisoning by this, taken either as antimonial wine or tartar-emetic, if vomiting has not already occurred, excite it by large draughts of warm water, by tickling the throat, etc.,—then as most important, give astringent infusions such as tannic acid, nut-galls, oak bark, peruvian bark, strong black tea. If tincture of cinchona is at hand, this may be given in teaspoonful doses every few minutes till better. Strong black coffee may be given in large quantities.

If the vomiting does not cease soon, put the patient into a warm bath, or apply a hot cloth over the stomach and abdomen, and give *Ipecacuanha*, every five to ten minutes; if not better soon, *Lachesis* or *Opium*; for nausea and other effects, *Ipecacuanha* and afterwards *Nux vomica*. For convulsions give *Opium*, and later *Chamomilla*.

g) *Tin*.—For poisoning by tin, give white of eggs and milk.

The chronic effects of tin, which occur so frequently, from the tin being scraped off from tin utensils, are mitigated by *Pulsatilla*.

b) *Chloride of Tin*.—1. Milk. 2. Sugar. 3. White of eggs. Afterwards *Hepar* and *Pulsatilla*.

i) *Zinc, Sulphate of Zinc*.—Milk and eggs should be given, and then carbonate of soda; afterwards give *Hepar*.

j) *Bismuth*.—White of egg; sweet mucilaginous drinks; milk; if vomiting continues, particularly if water is ejected, give *Cinchona* or *Arsenicum*.

6. VEGETABLE POISONS—ANTIDOTES AND TREATMENT.

a) *Poisonous Mushrooms*.—These fungi do not generally produce any perceptible effect until several hours after they have been taken. The abdomen then becomes enlarged, with a cutting pain in the region of the stomach; vomiting and purging preceded by thirst, nausea, hiccough, agitation; coldness of the limbs, small pulse, stupefaction, incoherent talking and convulsions. If these symptoms appear, promote vomiting and let the patient drink freely of cold water, as cold as it can be had; from time to time give finely powdered charcoal, made into a sort of paste with sweet oil. Give also Glauber's or Epsom salts. Should these means not afford sufficient relief, let the patient smell slightly of spirits of hartshorn. The remaining symptoms may be removed by *Pulsatilla*.

b) *Blighted Corn, Ergot*.—Blighted corn, or those thick, black grains in Indian corn, rice, wheat, rye or other grains; also the sweet or black rusty taint in grain is very injurious to man and beast. The ill-effects of it, however, can be counteracted by the common black nightshade, bruised in cold water, and then hot water poured on it. Inhale the vapor of this or wash the cattle with it.

c) *Intoxicating Plants*.—For plants which are intoxicating in their effects, making the person who takes them drunk, or depriving him of consciousness, making him delirious and raving, the principal antidote is coffee, drunk in large quantities and given in injections. For some of these substances, such as aconite, henbane, and thorn-apple, vinegar answers very well. Vomiting should, however, be first excited, and afterwards large injections of soap-suds be given to clear the intestines of poison. If the patient has a red face, red eyes, looks wild and stares, cold water poured over him is very useful. Give him an occasional dose of *Belladonna*.

For parts of plants which smell of bitter almonds, and consequently contain that virulent poison Prussic acid, such as bitter almonds, peach kernels and peach leaves; also for cordials prepared with them, such as cherry brandy, persico, and noyau, and many medicinal compounds into whose composition it enters, in all of which it is easily detected by the peculiar smell and bitter taste and by its effects: heaviness, giddiness, oppression, particularly on the chest, first a quick, afterwards a slow pulse, paralysis or a feeling as if paralysis were about to ensue: for all these strong coffee without milk is the chief remedy, and in very dangerous cases, spirits of hartshorn, of which the patient may smell a little from time to time, or mix a

few drops in a tumbler of water, and give a teaspoonful every ten or fifteen minutes. When the symptoms are very violent, the cold affusion to the spine, described under Prussic acid, will be requisite.

d) *Opium or Laudanum*.—For poisoning with opium, laudanum or morphine, the seeds of poppy, or a decoction of poppy heads, which are foolishly given to children to make them sleep, coffee is the best antidote. If the patient lies insensible, pour hot and cold water alternately over the face and chest; slap him vigorously with wet towels; when consciousness is partly restored walk him up and down between two persons; talk to him, and if he relapses slap him again with the wet towels; try if vomiting can be induced by emetics, if not give large drinks of strong black coffee, this may induce vomiting; tickle throat with a feather; if possible use a stomach pump. Let every effort be made to keep the patient awake, and that for many hours. Sometimes a tea made with oats will answer (that is, common oats, such as are given to horses), wash well a large handful of these, and then pour two or three cups of boiling water on them; give a tablespoonful at a time. If children, after a large dose, remain stupefied or sleep, give them *Belladonna*, in water, every ten, twenty, or thirty minutes; if this does no good, try *Muriatic acid* in same way. Some time after, it is well to give *Ipecacuanha*, repeating it a couple of times, and if the pains remain, *Chamomilla*; after some days, if necessary, *Mercurius*. For poisoning with the seeds of *Stramonium*, called also thorn apple, give also coffee and lemon juice, or vinegar in large quantities; if no vomiting ensues, give mustard and water; for the remaining symptoms give *Nux vomica* or *Opium*.

e) *Poison Vine or Ivy*.—Poison vine is apt to cause a complaint similar to St. Anthony's fire (erysipelas). Rubbing or scratching should be avoided as much as possible, and strong washes or unguents to drive in the eruption are also highly injurious. If careful washing with soap and water does not relieve the itching, try rubbing with wheaten bran, or dusting with hair-powder. Let the patient abstain from everything that is heating and stimulating, and take *Bryonia*; if the complaint gets worse, take *Rhus tox*. If the irritation is in the face, and *Bryonia* does not give relief, give *Belladonna*.

External injuries from plants which exude a pungent, milky juice, and which are very common in the country, are removed by washing with soap-water and afterwards with brandy. If some of the juice has got into the eye, apply the oil of almonds, unsalted butter or milk; if it has got into the stomach, use soap-suds, milk, etc., but neither acids nor emetics. The same holds good of all acrid, burning, corrosive, vegetable substances, as gamboge, euphorbium, etc.

f) *Pink Root*.—In cases of poisoning by that noxious plant, pink root, (*Spigelia*) so frequently given for worms, let the patient smell camphor, give him coffee without milk, and if, after the expiration of several days, palpitation of the heart, giddiness, etc., still remain, give *Mercurius*.

g) *Camphor and Saffron*.—In cases of poisoning with camphor or saffron, give coffee without milk till it brings on vomiting, and if all the symptoms do not disappear, *Opium* every half hour until they cease.

h) Spirits of Turpentine.—In cases of poisoning with spirits of turpentine, *Opium*, *Belladonna*, or *Bryonia* will prove efficacious. If the kidneys and bladder are much affected, *Cantharides* should be given.

For poisoning by all other vegetable substances let the patient smell camphor, and give him coffee to drink if the camphor does not afford relief. If they produce a feeling of stupefaction, weak vinegar may also be given; if very painful, soap-suds and milk.

7. ANIMAL POISONS—ANTIDOTES AND TREATMENT.

a) Spanish Flies.—Spanish flies (cantharides) or plasters made thereof, contain virulent poison, which not unfrequently produces very serious symptoms, especially if it gets into the stomach or into the eyes. It causes violent burning, which is aggravated by oil, fat, milk, etc. The best antidotes to be used, both inwardly and applied to the eyes, are the white of eggs and tepid, slimy substances, such as gruel, etc. Apply these plentifully to the eye, or if you have nothing else, use flour, and do not wash and rub too much. The poisonous substance may often be extracted with a narrow strip of linen or paper rolled into a point.

For all bad consequences arising from taking cantharides, or from their application in blisters, and for similar poisoning from other insects, camphor is the chief remedy. Let the patient smell it very frequently, or take a small piece of camphor, put it into a small bottle of water, shake it until the water retains the smell; give a spoonful of this at a time, and rub with spirits of camphor the parts most affected. For headache rub the temples; for violent pains in the kidneys or bladder, rub the loins; if camphor should afford no relief, give *Apis*.

b) Poisonous Honey.—For the injurious effects of poisonous honey, camphor is also most to be recommended. It should be frequently smelt, and spirits of camphor rubbed into the skin. Inwardly give warm tea or coffee without milk.

c) Hair of Caterpillars.—The hair of caterpillars is apt to cause violent inflammation. Do not rub, for it will only make it worse; but apply handkerchiefs which have been moistened with spirits of camphor.

d) Shell-fish and other poisonous fish, etc.—Among shell-fish, such as clams, muscles, cockles, etc., we sometimes find some which are poisonous and produce troublesome complaints. If there is an inclination to vomit, encourage it; give charcoal with sugar and water, or in molasses; let the patient smell camphor and afterwards drink coffee without milk. For eruptions and swelling of the face, give *Belladonna*.

If poisonous fish produce bad symptoms, give finely powdered charcoal with brandy, and if this affords relief, some hours after, coffee without milk; if it does not afford relief, give quantities of sugar to eat or to drink in water; if this also proves ineffectual, give weak vinegar internally and apply it externally.

When the poison or urine of *toads, frogs* or *lizards*, has got into the eye, washing the eye with warm milk and water has been recommended; this will do no good, but *saliva* will. The saliva of a healthy person will neutralize the acidity of the poison, quicker than anything else.* Next give *Aconite* every hour, or as often as the symptoms are worse. If the poison has entered the mouth, take as quickly as possible a tablespoonful of finely powdered charcoal with milk or sweet oil. If sudden and dangerous symptoms appear, let the patient smell sweet spirits of nitre. Some time after give *Arsenicum*.

e) *Poison of fat in half-putrefied meat*.—The poison of fat generated in half-putrefied, half-sour meat, blood and fat, and also in cheese, particularly in blood-puddings, liver-puddings, sausages, sour pork, bacon and hams, old rancid goose-grease, and substances not sufficiently or regularly smoked, is very injurious. It is generated very fast, and things which are eatable to-day, may be poisonous to-morrow.

The principal symptoms of this poison are: heartburn and nausea; a feeling of dryness in the throat, extending, by degrees, into the mouth, the nose, ears and even the eyes, and after some days cracking of the skin of the eyelids, the sides of the nose and the points of the fingers. The voice becomes hoarse very soon, the pulse is slow and weak; hunger and thirst are very great, but the patient can scarcely swallow anything. It is generally attended by great weakness, the eyelids seem paralyzed, the pupil of the eye is dilated, and the patient does not see distinctly, but as if he were looking through a fog, or he sees everything double. The abdomen at the same time is tense, with much pain and constipation; finally, the knees and feet become stiff. If the patient does not die in a few days, a tedious, often incurable, disease will remain.

Any one who has eaten of such things, and after some hours notices these symptoms, should not be tardy in applying the proper remedies. If within four or five hours after the meal he feels disposed to vomit, let him drink tepid water to encourage it. If there is no disposition to vomit, it should be promoted as soon as possible by artificial means. Sometimes the burning and dryness in the throat are supposed to arise from acidity in the stomach, and people take magnesia, which does no good; or they imagine it to be from corrosive poison and take oil, which likewise is useless. The only things that can do good are acids or oil of turpentine. As soon as the stomach has discharged its contents, give weak diluted vinegar; let the patient wash himself with it and gargle with it. Lemon juice answers still better. When the patient is getting tired of the acid, give from time to

* There are some people, even doctors of medicine, who are affected or rather afflicted with such an extreme degree of refinement and delicacy, that it borders on silliness; they think it against all rules of good society to put saliva from the mouth of one person into the eye of another. The doctor may write a prescription, send it to an apothecary's shop, and wait until a poor imitation of saliva has been made, by mixing filtered white of eggs and $\frac{1}{100}$ part of the sulpho-cyanate of soda,—it would take a considerable time, however, before this preparation could be made.

time a drop or oil of turpentine on a lump of sugar. Occasionally you may give a cup of coffee without milk, or, what is still better, strong black tea. If the dryness does not diminish or returns again, if mucilaginous injections do not produce any evacuation, give *Bryonia*. If a temporary improvement takes place, wait; but if the symptoms return, repeat *Bryonia*. None but mucilaginous injections, with a little acid, ought to be administered.

If there are still some symptoms left after the use of *Bryonia*, they may be removed by *Veratrum* or *Phosphoric acid*; should the paralysis or dryness remain, give *Arsenicum*; this may be followed by *Phosphorus* if necessary.

8. POISON GENERATED BY DISEASE OF ANY KIND.

Disease of any kind in man or beast, generates poison in a similar manner as does putrefaction in animal substances. These poisons differ as much in their nature as the diseases themselves; some produce but a trifling, others a very considerable effect; some by mere evaporation, but most of them when they enter the blood or the stomach. Every one shuns that which emanates from sick persons, and thus a natural loathing preserves us from these baneful influences. For this reason careful people avoid the garments of those who have for a long time suffered from a dangerous disease. But against diseased animals we are not generally sufficiently on our guard; their exhalation alone proves injurious in many cases. Thus, that from a horse which has glanders, may affect a human being with a disease quite different. The excrement of sick animals is still worse; their saliva and the pus from sores are always poisonous; but notwithstanding the decidedly dangerous consequences, leprous or measly pigs are still killed and eaten.

The most dangerous malady in this respect is the *malignant splenic disease* of cattle. If the blood of such an animal only falls upon the hand, it may prove infectious; the same consequence may result from the skinning of such animals—nay, from the tanning of the skins—and yet avarice and ignorance continue to persist in the skinning of these diseased animals. Their flesh, though salted and smoked, is a poison, and always produces death or a lingering, incurable disease.

The malignant splenic disease in cattle is known by a sudden drooping and dullness; they stumble and tremble, particularly after drinking; they have a dry hot skin and short breath; during these symptoms, inflammatory tumors or boils are formed. Unless such cattle can be saved by throwing frequently large quantities of water on them, and giving *Arsenicum*, they must die. In case the latter event takes place, endeavor at least to preserve other animals that may have been exposed, by the use of cold water. Those which perish should be buried in a very deep pit, without being touched by the hands. Everything that has come in contact with such animals should be burnt, buried, or purified with chloride of lime in water.

When a person has been infected with this disease, he first feels melan-

choly, weak and chilly; red spots, black in the centre, show themselves on different parts of the body; these soon become bluish tumors, and eventually inflammatory gangrenous ulcers. By no means put a poultice on them, nor anything warm and moist; bleeding is also dangerous. The best remedy is quiet, a strict diet, drinking plentifully of cold water, and frequently throwing it over the patient, and drying him quickly afterwards. Internally give *Arsenicum*, frequently repeated.

Whatever has been soiled by horses which have had the glanders, should be cleansed with chloride of lime; exposing it for a long time to the air and the sun, also, will make it innoxious. If a person has been infected by a glandered horse, give *Arsenicum*, particularly if there is pain; repeat it as often as the pain increases; if this does not relieve, give *Lachesis*; should this also fail give *Phosphoric acid*. Some time after, *Sulphur* may be taken, if necessary; and if some symptoms still remain, after three or four weeks, give *Calcareæ*. Neither of these two remedies should be given oftener than once every five or ten days—and should not be repeated as long as the case improves.

When one has reason to fear that he has contracted one of these diseases by contact with the animal, exposure to great heat is recommended. The best way of accomplishing this is to place him in an ordinary vapor bath, or a Turkish bath; take first *Arsenicum*, later *Lachesis*, if necessary. In horses, a cure may sometimes be effected by the administration of *Aconite*, *Rhus tox.*, and *Arsenicum*, in the order in which they are named.

II. POISONED WOUNDS.

STINGS AND BITES OF ANIMALS—THEIR ANTIDOTES AND TREATMENT.

a) *Stings of Spiders*.—The sting of spiders, centipedes, scorpions, the bites of many flies, mosquitoes, and of bugs, are rarely dangerous, but may become troublesome by their numbers, and produce serious consequences by attacking tender parts; especially when little children or very delicate persons are thus afflicted.

The best remedy is to hold the injured part near the fire; or bring a red-hot coal, wire, or lighted cigar or pipe as close to the spot as possible, and hold it there until the pain is removed; or, if no fire is at hand, wash the injured part with cold water and hartshorn.

b) *Stings of Bees, etc.*—When pursued by a swarm of bees, take care not to strike at them with a view of keeping them off, for it does no good, and only irritates them the more; make your escape as quickly as possible, closing the mouth and protecting the eyes; but should a swarm follow you notwithstanding, particularly in the bushes, and should many have already alighted on your head, and there be no water near into which to plunge,

lie down flat upon the ground, with the face downward, protecting the sides of the head with your hands, and lie still till they are gone.

The first thing to be done, particularly when there are many, is to cut off the stings near the skin with a sharp knife or scissors; in trying to extract the sting with the fingers more poison is often pressed into the flesh. Salt water is the chief remedy, constantly renewed. In cases of stings in the mouth or throat, let the patient swallow some salt water or rinse and gargle with it. Until the salt water can be procured apply fresh garden mould; sweet oil is often useful, particularly when many stings remain in the skin. Honey and strong-smelling herbs often relieve. In cases of great swelling, itching or great weakness, give *Apis*; sometimes, when there is much pain, *Arnica*. For remaining symptoms, *Natrum muriaticum*.

The same observations apply to the stinging of wasps, only that in this case the sting does not remain in the wound. Always warn children not to bite imprudently into an apple or pear in which there is a hole; sometimes wasps hide therein, and their sting in the mouth is very dangerous. After stings in the mouth and swollen tongue, when the above remedies do not relieve, give *Belladonna*, particularly if worse on the forepart of the tongue; *Lachesis* when worse on the back part.

In the very worst cases, when the patient falls down, let him smell sweet spirits of nitre, ether or chloroform, but only a very little; before you can get these things, try to make the patient breathe fast by making him run between two other persons, or if that cannot be done, open his mouth, put something between the jaws to keep them open, draw his tongue forward, put your fore and middle finger upon his tongue as far back as you can, and press it forwards and downwards. If the patient commences to breathe, lessen your pressure by degrees; if he tries to vomit, release the tongue at once.

Mosquitoes may be driven away by the smoke of brown sugar, strewed upon live coals or red-hot iron; after some time let the smoke pass out, and close the doors and windows. The bites of mosquitoes which pain severely, are relieved by the application of lemon juice or ammonia.

Be careful not to check the inflammation from the stings or bites of insects too quickly, when they are numerous, by external applications; the consequences are the same as when an eruption of the skin is too suddenly checked; rather give *Aconite*, and some hours later *Arnica*. If not better the next day, *Natrum muriaticum*.

c) *Bites of Snakes*.—It is well to know which snakes are poisonous. All poisonous snakes have in the upper jaw two long, large teeth; all those which have in the upper and lower jaw each two rows of teeth, are not poisonous. The bite of a venomous snake is generally attended with violent shooting, and sometimes burning pain.

When the serpent is not venomous, rub some salt or gunpowder into the wound, as such wounds have often become troublesome. But if it is venomous, tie a ribbon, cloth, strap, rope, or the like, tightly around the limb,

two or three inches above the wound, to prevent the blood returning from the wound to the heart, and leave it as long as the patient can bear it, or until the danger is past. Every endeavor should be made to extract the poison; for this end, the best means is the application of cupping-glasses frequently renewed till nothing more exudes from the wound. A cupping-glass may easily be extemporised in the following way: take a small glass tumbler, dip a piece of paper or cotton into brandy, whiskey, or other spirits, spirits of wine, eau de cologne, any toilet perfume will answer the purpose; set fire to this, throw it into the tumbler, and immediately apply the mouth of the tumbler over the wound, taking care to press it close upon the skin so as to allow no air to enter. If the materials are not at hand, or the wound is so situated as to prevent the employment of cupping-glasses, the wound should be sucked. This can be done without danger, provided the person who sucks has no sore on his lips or in the mouth; it would be well to take salt or garlic into the mouth. The sucking must be strong and continuous, and the wound must be drawn well open. Whilst sucking press your hand firmly towards the wound over the adjoining parts, particularly from the side next to the heart. After everything has thus been drawn from the wound, the best external remedy is heat. Whatever can be had soonest, red-hot iron or coals—if nothing better, a lighted cigar—must be brought as near to the wound as possible, without causing violent pains, and without burning the skin. Cauterizing, or burning with a hot iron, is useless, because it destroys the smaller vessels. Apply, therefore, the hot iron or coals as close to the wound as the patient can bear it. As soon as the iron or coal cools, have another ready. Place several pieces of iron at once in the fire, and change them frequently; and take care that there is a sufficient supply of red-hot coals. The heat should only operate upon the wound, and on the parts immediately around it, and not on too large a space. Do not blow the coals which you apply, this would cool the skin too much. If you have oil or fat at hand, smear it around the wound for three or four inches, and when absorbed, renew it. If you have no oil or fat, take soap or saliva. Whatever oozes forth from the wound must be carefully wiped away. Continue to apply heat until the patient begins to shudder and to stretch; if this should occur soon, continue the application for an hour if he can bear it, or until the symptoms of the poison give way. If these symptoms return, renew the application. After the wound has been thus treated, rub into it salt and gunpowder, cigar ashes or wood ashes, whichever is at hand, but fine salt is best. At the same time the patient must be kept as quiet as possible, the less motion or agitation he is subjected to the better.

Give inwardly, as soon as possible, salt water, salt, gunpowder or garlic. If bad symptoms appear, notwithstanding, give wine or brandy, a few drops or half a teaspoonful at once, every two or three minutes, until they disappear again, but resume the treatment as soon as they re-appear. If the shooting pains grow worse—if they are in the direction of the heart—if the spot turns blue or spotted, or swells—if vomiting, giddiness or fainting en-

sue, give *Arsenicum*, oft repeated; if there is improvement, do not repeat until worse again. If several doses have produced no effect, give *Belladonna*. *Phosphoric acid* will sometimes remove the remaining symptoms, and sometimes *Mercurius* or *Lachesis*. Daily visits to the hot room of a Turkish bath are strongly recommended.

d) *Bites of mad dogs*.—The bite of a mad dog, or of other rabid animals, should be treated in the beginning in the same way as snake bites. Burning, cauterizing, cutting, lacerating, suppurating, and all similar cruelties, are positively useless; the more you lacerate the wound, the more rapidly will the poison enter into and circulate with the blood. The cupping-glass should be at once applied and the application of radiating heat, as just described under snake bites, be made without delay and repeated three or four times a day, an hour each time, or until shuddering appears. Let the wound heal quietly, after the above means have been resorted to, and only make use of the precautions indicated below.

Heat should be occasionally applied to the wound in the manner just described, until the scar becomes of the natural color of the skin. It should be renewed whenever the wound appears hard, dark-colored, red or inflamed. Daily visits to the hot room of a Turkish bath have saved the lives of several, and should not be neglected.

Sometimes after seven days, or later, particularly when the patient has a slight fever, a small blister will appear under the tongue; have this opened with a pair of fine pointed scissors, or a penknife, and let the patient rinse his mouth with salt water.

The vapor bath has proved a very efficient remedy. It may be used in case it is impossible to go to a Turkish bath. If there is an opportunity of using it several times, soon after the bite, it will, no doubt, be of benefit to the patient; at any rate, apply it as soon as any suspicious symptoms make their appearance. These symptoms are: sudden and unusual thirst, followed by shuddering and loathing when drinking; an aversion to anything bright, and to the wind; great sadness and dejection.

The bath may be of service, although convulsions should have commenced. To administer the vapor bath, the patient should be in a place large enough to have sufficient air to breathe, and yet so small as to be easily filled with hot vapor. If the patient is already suffering from convulsions, he should be wrapped in a sheet, to confine his hands and feet, but the neck and head ought to be perfectly free. A small room with wooden walls, which can be tightly closed, is best. Into this room carry red-hot stones or bricks, as many as necessary; throw water upon them, or, if the patient cannot bear this, wet sand. As the stones cool they must be removed, and reheated. Place a tray with wet sand near the door, in which make a hole to pass the stones through, or place them on a bench or table near the window. It is well to have some one in the room with the patient.

All these directions, however, become useless, unless a good fire is kept

up, and there is a sufficient number of persons to change the stones and heat them, for the whole room must be closely filled with hot vapor for a sufficient length of time. If the bath is used as a preventive, one to two hours are requisite; if used after the convulsions have commenced, until they cease.

A Russian bath, if that can be obtained, is the best of all vapor baths for the purpose, the above is merely an extemporaneous imitation of it. A simpler method still of administering a vapor bath, is to make the patient sit on a cane-bottomed chair, cover him well up with two or three thick blankets, and introduce beneath the chair on which he sits a tub of hot water, into which you are to drop occasionally a red-hot brick; or a more elegant and convenient method of generating the heat and vapor, is to introduce beneath the chair a large spirit lamp, the flame of which plays on a saucerful of boiling water placed above it. Such an apparatus may readily be extemporized, but it is also to be had in many of the hardware and tin shops.

To prevent convulsions, give *Hydrophobinum*, evening and morning, every week, until it produces fever, diarrhœa, etc.

Cantharides, third dilution, may also be mentioned as a preventive. If ulcers or eruptions should appear, no external application must be used, they will disappear.

If the patient labors already under hydrophobia, give *Belladonna* at every return of the convulsions. If after some time the convulsions continue about the same, give *Hyoscyamus*; if this fails, *Cantharides*.

The endless variety of medicines for hydrophobia, to which every country and every year make new contributions, do not deserve much consideration, as not a single mad dog has ever been cured by them. They are mostly recommended from having, as was supposed, prevented the disease; but as only about one person in twenty, of those who have really been bitten by rabid animals, are attacked by hydrophobia, whether medicines have been used or not, this pretended prevention proves nothing. Many persons are attacked by hydrophobia through the effect of imagination, and for such cases almost any remedy will answer. We ought not to place too much confidence in the methods of cure so often recommended; and to subject every one bitten to the tortures of cauterizing, cutting and bleeding to excess, is absurd. In most cases nothing is required; and in the few cases where the poison takes effect, such violent means are of no use whatever. If bad symptoms or ulcers appear after the bite of an enraged person or animal, give *Hydrophobinum*.

When *putrid animal substances* have got into a wound, or pus—matter from ulcers of men or animals—give *Arsenicum*.

If blood, pus or saliva of an animal affected with the malignant splenic disease, glanders, etc., use *Arsenicum* and heat, as stated above.

For the bites of any angry animal; if pus or other diseased matter gets into a wound; if you have been obliged to touch persons or animals labor-

ing under a contagious, dangerous disease, it is best to expose your hands for five to ten minutes to as great a heat as you can bear, then wash them thoroughly in soap and warm water, and take *Arsenicum*.

We have thought it advisable to prepare a brief summary of the foregoing remarks in a tabular form, by referring to which any one can easily find the proper antidotes, in the most dangerous cases of poisoning, where it is necessary to render immediate assistance.

TABLE OF ANTIDOTES TO THE MOST POWERFUL POISONS.

POISONS.	ANTIDOTES.
I. GASES.	
Gas produced in places deprived of fresh air, such as privies, wells, etc.	Chloride of lime; vinegar.
Vapor of charcoal.	Vinegar and vapor of vinegar.
II. ACIDS.	
Prussic acid.	Cold affusions to the head and spine; spirits of hartshorn.
Sulphuric, muriatic, phosphoric, acetic acid, and strong wine vinegar.	Tepid soap-suds; magnesia; chalk, powdered and mixed with water; wood ashes mixed with water; carbonates of potash or soda.
Nitric and oxalic acids.	Carbonates of magnesia and lime.
III. ALKALINE POISONS.	
Pot and pearl ashes, caustic potash, carbonate of potash and ammonia.	Vinegar; lemon juice, and other vegetable acids; sour milk; mucilaginous drinks and injections; olive or castor oil.
IV. METALLIC SUBSTANCES.	
Arsenic.	White of eggs with water; rust of iron; a soapy fluid made with equal parts of lime-water and oil; sugar-water; milk.
Corrosive sublimate, copper, verdigris.	White of eggs in water; sugar-water; milk; starch from wheat flour.
Lead.	Epsom salts; Glauber's salts.
Lunar caustic.	Common salt dissolved in water.
Tin.	Sugar, white of eggs and milk.
V. VEGETABLE POISONS.	
Opium or laudanum, stramonium.	Coffee; vinegar.
Bitter almonds, peach kernels or peach leaves.	Spirits of hartshorn; coffee; cold affusions.

CHAPTER IX.

EXTERNAL INJURIES.

CONCUSSION, BRUISES, SPRAINS, DISLOCATIONS,
FRACTURES, ETC.

CONCUSSION OF THE BRAIN may be produced by a blow upon the head, a fall, and sometimes by a violent shock to the body. In cases of violence, not very severe, there will be temporary loss of memory, stupefaction, vertigo, ringing in the ears, etc.

In more severe cases the accident is immediately followed by insensibility, patient lies as if in a sound sleep; there are vomiting, feebleness and irregularity of pulse, and cold extremities.

As the stupor and other symptoms gradually wear away, inflammation of the brain, of an active character, frequently begins to develop itself, which, if not speedily checked by appropriate treatment, may terminate fatally.

A severe fall or blow upon the head may have cracked the bones of the skull internally. In some cases such injuries, if not great, may be cured by remedies which act on the bones. In severe cases the stupefaction might disappear and the patient apparently improve, yet death ensue in a few days, hence it is very important to ascertain whether there is a fracture. Proceed as follows: Tie one end of a cord to a silver spoon or fork or a piece of iron, something that will give a clear sound when struck, let the patient take the other end of the cord between his teeth, or fasten it to one of his teeth, or wrap it around the finger, which is to be inserted into the ear of the patient; now strike the metal, which must swing clear, and the vibrations will be communicated to the bones and great pain will be felt at the point of fracture if the bone is cracked. Even a stupefied person will show it, if pain is felt, by distorting the face. A physician will be better able to judge of these symptoms, and therefore they should be communicated to him. If a sound produced in the above manner causes pain in the head, *Hypericum* in water is sometimes serviceable; at the same time the patient should be kept very quiet; he will generally find the best position for his head himself. If one side is more fractured than the other, let him lie on the less injured side; if it is internal, keep his head in an elevated position and place a small round pillow at the nape of his neck. The doors must be closed gently, and everyone in the room move with the greatest precaution.

For concussion of the brain, as well as in all other cases of shock from external violence, *Arnica* is the principal remedy.

A few teaspoonfuls of cold water, immediately after the injury, will often be of great service in reviving the patient, and should always be resorted

to, as water can do no harm. The application to the head of cloths dipped in cold water, and to which, in case of external injury, a few drops of *Tincture of Arnica* may be added, will also be of great benefit.

The diet should be of the most simple kind; and no wine, brandy, coffee, spices, nor stimulants of any kind made use of. Bleeding should not be resorted to, as in many cases death has ensued from large bleedings, intended to obviate inflammation of the brain.

If active inflammation of the brain should set in, notwithstanding the use of the means recommended above, it may be necessary to administer *Aconite*, *Belladonna*, and other remedies recommended under that head, which see.

Concussion of other parts of the body may occasion a variety of unpleasant effects. Sometimes internal parts are distended or torn; pain arises, which increases the following day; violent headache, giddiness, pains in the chest, asthma, hacking cough, spitting of blood, pain in the back, descending pains in the belly, etc. In all such cases *Arnica* is the chief remedy. The patient should remain as quiet as possible; drink plenty of cold water; wash the painful parts frequently in cold water, or with water containing a few drops of *Arnica tincture*; neither eat nor drink anything stimulating; make use of no wine, brandy, coffee, tea, or spices, of but little salt, and of nothing sour.

If the accident was attended with sudden fright, give first, *Opium*, and some hours after, *Arnica*. If the patient faints, or is senseless and stunned, wash his head, face and arms with cold water, and give, if it can be done immediately after the accident, a few drops of wine; but if fifteen or twenty minutes have elapsed, *Aconite* or *Glonoine*, and afterwards, if necessary, *Arnica*. Bleeding is always unnecessary, and sometimes injurious.

When pregnant women, in consequence of a fall, slip, or other violent concussion, feel pains in the abdomen, a thing which occurs very frequently in the first months of pregnancy, and which is often the precursor of a miscarriage, give *Arnica*, and let the patient keep quiet, if possible in a horizontal posture, and avoid, for several days, every exertion. Should the pains, notwithstanding, become very violent some hours after *Arnica* has been given, give *Chamomilla* or one of the other medicines recommended under "Miscarriage."

In headache from concussion give *Glonoine*, *Belladonna* or *Phosphoric acid*, whichever may suit best according to the symptoms enumerated under "Headache." If a dull pressure, give *Arnica*; if very violent and the eyes are painful, give *Hypericum*.

Affections of the chest, caused by violent concussion, are removed by *Arnica*. Sometimes *Aconite* or *Rhus* is required. Look under "Chest," Part II.

OVERLIFTING.—If lifting or carrying heavy loads, or any sudden exertion of strength produces pain, give *Rhus*.

When from this cause very violent piercing pains are felt in the small

of the back, which become worse on every motion of the body, give *Bryonia*. If this does not relieve entirely, *Sulphur*.

If headache ensues, and *Rhus* will not remove it, give *Calcarea*.

STRAINS.—If one has injured himself by violent extension and then pressure of the abdomen, as in climbing over a high fence, wrestling, etc., and afterwards feels suddenly sick at the stomach, has violent pains in a small spot internally in the abdomen, or has there a sensation as if everything was pulling downwards, which makes him anxious and restless with a face full of agony, *Veratrum* will give relief.

When a person, who has great tendency to such injuries, meets with them often, give *Sepia* each time.

MISSTEPS sometimes cause pains in the limbs similar to overlifting. They will generally be relieved by *Bryonia* or *Rhus*; or, if the stomach is much affected, by *Bryonia* or *Pulsatilla*.

If the injury occurs often, and is caused by debility, it will be cured by *Phosphorus*, which should be given whenever it returns.

BRUISES.—In the treatment of bruises, nothing is more efficacious than the application to the injured parts of cloths (linen is to be preferred), dipped in cold water, and the internal administration of *Arnica*.

In very severe cases, followed by fever, give *Aconite*, and some time afterward *Arnica*, if it seems necessary. Occasionally *Arnica* may be again necessary after a few days.

A lotion of *Arnica tincture*, made of the root, in the proportion of half a teaspoonful to a tumbler of water, may also be used.

If a limb is crushed and flattened, or otherwise disfigured, it should be pressed by the hand from time to time, until it returns to its proper form; or it may, if necessary, be straightened and kept in its natural position by means of a piece of pasteboard, wet with hot water and so softened that it can be moulded to the limb; or thick gutta percha, treated in the same way so as to render it flexible, and capable of being adapted to the shape of the limb; a bandage must be placed over all to keep it in place. Cold water, dieting, and the above remedies will be the best treatment; all salves and lotions, except that of *Arnica*, are unnecessary and often injurious.

Should suppuration (formation of matter) ensue, from neglect, bad management, or impurity of the blood, *Hepar* must be given. If in the accident the bone was injured, or there was a fall or blow, directly on a bone, for instance on the shin, apply a cloth kept moistened with water, in which a few drops of *Ruta* have been put. This will be particularly beneficial when the injury was very violent, and the pain seems to be deep in the bone.

If the pain is more external, so that it is only painful to the touch, or the wound assumes a red appearance, which extends and increases like erysipelas, give *Ruta* internally and apply a solution in water externally. If the

ordinary *Tincture of Arnica*, made from the cheap flowers, has been used externally—the erysipelatous appearance may arise from its application, for the flowers nearly always contain the eggs, worms or cast-off skins of a poisonous moth—camphor should then be used externally as the best antidote.

But should the incipient signs of mortification present themselves, as increased swelling and pain, the pain of a pungent burning kind, loss of sensibility, heat and color, and the wound begins to change to a darker hue, *Cinchona*; and if the skin assumes a dark, livid color, recourse must be had to *Lachesis*, which should be given at short intervals, and may prevent the loss of life and limb. Amputation should be postponed as long as possible; many a limb has been saved by the reluctance of the patient to have the operation performed.

BRUISES ABOUT THE EYES from blows with the fist, a stick, a stone, a flying cork, etc., are to be treated in the manner indicated above; change the piece of wet linen, as soon as it becomes warm, for a cold one, and bandage the eyes, for the purpose of keeping the light from them. Whenever the pain increases, give *Arnica* or *Aconite*, according to the symptoms.

BUMPS on the heads of children should not be pressed with a knife; but treated with applications of cold water, or water with a few drops of *Arnica tincture* in it, and the internal administration of *Arnica*. If bad symptoms occur later, if the child has dizziness after shaking the head, or pains and dilated pupils; if it bores the head into the pillow, and has fever and convulsions, water on the brain (hydrocephalus) is to be feared, *Belladonna* or *Hyoscyamus* should be given.

Consult also "Concussion."—In cases of this kind, however, as in all serious cases, it is better to consult a homœopathic physician.

SPRAINS.—A limb is sprained when, after a fall or other violence, it pains severely, cannot be moved without pain, swells and turns red.

At the commencement of the treatment of these troublesome injuries, apply cold water freely.

Arnica should be taken internally. After the removal of the more acute symptoms, it may be necessary to resort to the use of *Rhus*, *Bryonia* or *Sulphur*, to aid in removing the stiffness and soreness which may remain. Gentle motions of the limb will also be beneficial.

If it turns blue: *Arnica*.

If a yellowish-blue spot becomes soft, give *Symphytum*.

If the swelling remains very long with more or less pain, use applications of warm vinegar. If the swelling about the joint is so soft, as to leave a pit when pressed by the finger, *Sambucus* will give relief; or else compresses of the moistened elder blossoms.

DISLOCATIONS, LUXATIONS.—The removal of the head of a bone from its corresponding articular cavity is termed a dislocation or luxation.

It is characterized by violent pain, loss of motion, swelling, alteration in the shape, length and direction of the limb. An unnatural depression or prominence can generally be felt in the vicinity of the injured joint; and there will be also a peculiar rigidity of the limb, and fever. By comparing the injured with the sound limb, the deformity will at once be apparent.

The first thing to be done is to give *Arnica*; or, if there is already redness and inflammation, *Aconitum*, and to apply cold water. By these means some relief may be obtained until a surgeon can be called, which should be done at once.

It is not necessary to do anything more after the dislocation has been reduced: all poultices, salves, bleeding, etc., are injurious. A proper bandage must be applied, and as soon as the inflammation abates, which, after taking *Arnica* and perhaps *Aconite*, will soon take place, the limb should be moved often, but carefully, lest it grow stiff.

FRACTURES.—The most certain sign of fracture is crepitation, a peculiar grating noise or sensation, produced by the rubbing together of two broken surfaces of bone. When on moving an injured limb, you can perceive this sensation, it is a pretty sure indication that it is fractured. In addition to this, there is usually increased mobility, which is the reverse of the peculiar rigidity of a limb in case of dislocation, some deformity, pain, swelling, inability to move or use the limb, and sometimes it is shortened.

In all cases of suspected fracture, send for a surgeon, and for a skillful one too, and not for "the first best," for mistakes committed under these circumstances can hardly ever be remedied. When children are the sufferers, more despatch is required. But in ordinary cases, a day or two may elapse without incurring any risk, for a broken bone does not unite so very readily. Before the arrival of the surgeon, the broken limb should be moved as little as possible; on the painful part put linen bandages dipped frequently into cold water, or diluted *Arnica tincture* if the soft tissues have been bruised; internally give *Aconite*, if the patient is very weak or faint, and some hours after, *Arnica*. Only when the pains are insufferable, and occasion convulsions, give *Chamomilla*, then *Hypericum*. In very rare cases only, when the pains are excruciating, and other bad symptoms appear, stretching of the limbs will afford any relief. To do this wrap towels firmly above and below the part of the fracture; then fasten to them long pieces of cloth and tie one of these, say the upper, to the head-board of the bed; then pull slowly on the lower, and when extension enough to relieve the pain has been gained, fasten this piece to the lower bed-post or foot-board, and so retain the limb in a painless position till the surgeon comes. After the bone has been set, give *Symphytum*.

Should the bone not unite readily, but remain loose—as sometimes happens with aged persons—give *Calcareæ phosphorica*, or if not to be had, mix a

small portion of diluted phosphoric acid with lime-water, dry the sediment which will be formed in this mixture, and give the patient as much of it as will lie on the end of a penknife, once a day. If the bones of young people will not heal, give good, strong broth, or meat-extract, which will be mentioned hereafter, under "Apparent Death from Hunger."

WOUNDS.

We ought first to know what wounds will heal of themselves and when treatment is necessary; we ought also to know how the cure can be accelerated, and what must be done in dangerous cases until a surgeon can be procured.

All wounds which are not mortal heal of themselves, without any medicine, unguents, plasters or salves. External applications are almost always injurious, and all rational practitioners have long ago discontinued the use of them. Nothing more is necessary than to apply a proper bandage, and to wet it from time to time with cold water. If requisite, some medicine should be given internally, and attention be paid to the diet.

a) *Dressing of the Wound.*—The most important thing in the healing of a wound is to bring the sides in close contact and exclude the air. Small, superficial wounds may be closed by pressing the sides together, and tying a bandage around the limb to keep them in that position. Common, small cuts on the fingers are often troublesome for a considerable time, as they prevent us from using the hand; but they will heal quickly with a healthy person, if sewed together, or drawn together by means of adhesive plaster or common court-plaster.

When the wounds are longer, penetrating through the skin into the flesh, a superficial suture will not suffice, but you must use adhesive plaster, the ordinary sticking plaster of the shops. Cut this into strips, a few inches long, narrower in the middle than at the ends. Warm them with your breath, or by wrapping them around a bottle filled with hot water, or around your arm, the side on which the plaster is, of course, turned out, till the plaster becomes soft. The narrow part must be placed on the wound. In applying them press the wound well together, and draw the strips tightly over it; they should be long enough to extend several inches beyond the wound on each side, otherwise they will not stick well. The hairs ought also to be shaved off from about the wound, and all moisture carefully wiped away. Open spaces ought to be left between the strips, particularly where the wound is deepest, that, in case of suppuration, the matter may be allowed to escape and prevent the formation of abscesses.

In dressing the wound the limb should be put in such a position that the wound will not gape, and should be kept in that position as much as possible.

Deep lacerated wounds, or long cuts in the face, lips, eyelids, neck, etc.,

have sometimes to be united by deeper sutures, which a surgeon alone can do properly.

Considerable stabs, or other narrow and deep wounds, must not be closed in this manner, as they would heal on the surface, and suppurate at the bottom. But if they are so situated that they can be compressed at the bottom, as well as at the orifice, it may be done until the surgeon arrives, who in all such cases should be consulted.

Besides being sewed or dressed with adhesive plaster, every wound ought to be so bandaged, that it may be the more firmly united, and that the air may be prevented from entering it; at the same time the limb ought not to be more compressed and laced than is necessary.

The simpler the adhesive plaster is, the better the wound will heal; court plaster disagrees with many, as balsams are added, which in some cases inflame the wound. Anyone can prepare it.

Isinglass is beaten and soaked in water until it is soft, then boiled with alcohol in a glass which is placed in boiling water until entirely dissolved; then it is spread on very fine linen or silk which has been tacked on a board. When dry cut it any desirable size. Plaster is also made with *Arnica*, *Calendula*, *Hypericum*, *Ruta* and other healing herbs; but these can only be used when the remedy is distinctly indicated in the case.

The bruising of the skin, especially on the knuckles, ends of the fingers and on the shinbone, sometimes causes a bad sore, and often becomes troublesome in children. The best application for such sores is the lining membrane of a raw egg. The best mode of obtaining this is to break the egg carefully and peel off the skin with which the shell is lined, in strips as broad as you can make them; put these with the side which was next to the shell on the wound until it is entirely covered.

Another good application is collodium, (a solution of gun-cotton in ether) it is sold in all drug stores. It is to be spread over the wound with a soft brush, the ether evaporates, and leaves a thin, transparent skin, which is not removed by water. The brush must be kept in ether, or it will become hard and stiff.

b) *Hemorrhage caused by Wounds*.—Wounds which have been closed and dressed in the aforesaid manner, generally cease to bleed. Sometimes, however, it is necessary to place a compress of linen upon the wound, and to keep it there with bandages. Cold water applied immediately and often renewed, will frequently stop the bleeding, yet there are cases where it does not suffice.

When the blood is gushing out of the wound, when the wound is on the neck, the superior and interior part of the thigh or arms, the whole limb or side of the neck should be compressed till the bleeding ceases, and a surgeon procured immediately.

The hemorrhage is still more dangerous when bright red blood flows from the wound, and the blood spurts at intervals as the pulse beats. Hasten, in such a case, to obtain the assistance of an experienced surgeon; but as

every delay is dangerous, tie a cloth very tightly around the limb above the wound, in the direction of the heart; this will stop the bleeding, but the pressure will be painful, so one can now more leisurely feel for the artery above this bandage on the interior part of the limb, which will be known by its beating; place lengthways on this spot a medium sized cork, press it well home, and put over it a compress two or three inches square, and as thick as a finger, and over this a bandage, which firmly tighten, and loosen the other somewhat; if no bleeding follows, the first bandage may be taken off; if bleeding does follow, tighten this last bandage till the blood ceases flowing; or if necessary re-apply the former bandage.

If the blood does not come in jets with every beat of the heart, but runs in a steady stream and not very profusely, or if the wound is so situated that the entire part cannot be encircled with a bandage, a compress may be put directly over the wound and a bandage be firmly applied.

People are apt to have recourse to very improper and injurious means to stop bleeding; in their fright they tie one cloth over the other, until they exhaust their whole stock of rags and handkerchiefs. But that cannot stop the bleeding—it merely conceals it for a few moments. When the first firm bandage does not stop it, the rest are useless and pernicious, as they prevent the cold water from penetrating, and conceal the danger.

Some persons put upon wounds which bleed profusely a mass of the most heterogeneous things imaginable: vinegar, cobwebs, balsam, brandy, punk, lead-water, the white of eggs and sweet oil, charcoal, glue, alum, soot, lemon-juice, shoemaker's wax, gum arabic, tar, urine, tan, oak leaves, salves, unguents, and other trash, to stop the effusion of blood; all these things render the healing of the wound more difficult, as they soil the surface, and as every foreign thing entering into a wound has again to be expelled by suppuration.

When a proper bandage, the application of cold water and of ice, a quiet and easy position of the patient, does not stop the bleeding, hasten for a surgeon, and until he comes proceed as follows:

Give the patient a little salt, and if that does not help him, give some vinegar and water. Do not give him much drink, particularly nothing warm.

Let the wounded part be elevated, and see that there is no more pressure on any part of the body than can be avoided. Should the patient faint, leave him at rest, and do not annoy him with smelling bottles. Fainting is always beneficial, for in this state the blood flows less rapidly, and is more apt to congeal in the wound, especially when aided by applications of cold water. If the patient turns quite pale, and becomes blue in the face, or has jerking of the limbs, however, there is danger, and *Cinchona* should be given immediately. After this, if worse again, give him a little good old wine, and after that, if necessary, repeat the *Cinchona*.

The same remedies ought to be given after much loss of blood; but when the bleeding has ceased, the patient may drink small quantities of cold water as often as he asks for it.

To stop the bleeding, when the first bandage and the application of cold, wet rags does not do it, give *Arnica*; if this fails, *Ipecacuanha*. The black glutinous drops which hang in chimneys where wood is burnt, will answer, if nothing better can be got. Take a portion of this as large as a pea, dissolve it in a tablespoonful of brandy, until the latter turns brown—mix this with half a tumbler of water, and drop it into the wound. If *Kreosote* can be had, it is to be preferred: one drop of it in a teaspoonful of water is fully strong enough. The persulphate of iron, known commonly as Monsel's Salt, is the most powerful styptic and may be put into the wound as a dry powder, or else mixed with a little water, and a cloth saturated with it applied to the bleeding parts.

The bites of leeches sometimes bleed too much; children have thus bled to death in the night, when proper attention was not paid to them. The wisest plan is to use no leeches at all; but those who have no knowledge of better remedies, must be expected to have recourse to improper ones. These wounds can be closed by putting in a couple of stitches, in the way before explained—they give no pain whatever. With children who dread this, the bleeding may be stopped by pressing the finger upon the wound for a considerable time, and applying some shoemaker's wax. During the night particular attention should, notwithstanding, be paid lest the bleeding recommence. After a vein has been opened the same precaution is necessary. The patient ought to rest undisturbed, and some one should be in attendance to see that the vein does not bleed again.

c) *Cleansing of the Wound*.—However well a wound may have been bandaged, it will not heal if it has not been properly cleansed; therefore, before dressing the wound, free it from everything extraneous. If the wound is full of dirt or sand, or if there are splinters in it, small pieces of glass, fish-bones, shot or rags, or if the iron which made it was rusty, it will not heal so easily. All foreign substances should, if possible, be removed by the forceps and by washing well with water. If you find it impossible to cleanse the wound thoroughly, dress it but lightly, not pressing it much, and renew the dressing frequently. Wounds of this kind, particularly when splinters remain in them, should always be dressed by a surgeon.

When a person has run a nail, fish-bone, splinters or glass into his foot, they cannot always be removed entirely; surgeons cut often in every direction, but in vain. Into such a wound drop at once a little vulnerary balsam; balsam of Peru is best; but if you have none, use Canada or any other; put over this a compress of linen, and tie it to the sole of the foot. Renew the application of the balsam every day until the wound has healed from within. At the same time the wounded person should walk occasionally, even though painful to him; the motion will assist in cleansing the wound. If there is much inflammation, apply cold water externally, and internally the remedies prescribed below, particularly *Hypericum*, and the wound may be dressed with *Oil of Hypericum*, known as red oil.

If after a wound in the sole of the foot has healed, violent pain is expe-

rienced, when walking, we may infer that there is still some foreign substance in the foot. Fasten to the sole of the foot a cork sole, a thick piece of pasteboard, or a thin board, with a hole cut in it just where it touches the sore part, and let the patient walk on it frequently; at the same time give *Silicea*, and if no better after a week, *Hepar*, and after waiting seven days, *Silicea* again. The extraneous matter will generally soon be brought out. Plantain seeds crushed and applied externally, are said to have the same effect. If you can feel any thing plainly under the skin, let an incision be made to take it out, or let the skin be scraped very thin with a sharp knife.

d) *Subsequent Treatment and Diet.*—Besides stopping the hemorrhage, and cleansing and dressing the wound, its subsequent treatment, as well as the diet of the patient, is a matter of importance. When the wound is large, the patient should keep as quiet as possible; he should neither exert his mind nor his body too much; he should drink plenty of cold water, and avoid every thing stimulating—much salt, spices, smoked food, etc.

If the dressing was necessarily put on very tight, loosen it somewhat if it becomes troublesome, the next day. If not too tight, leave it undisturbed for two or three days, if the wound does not suppurate, and always remove it gradually.

In removing a piece of sticking plaster, always begin at both ends and proceed to the centre; begin to remove the strips, at one end of the wound, replace the strip removed immediately by another, and continue in that manner till finished, in order that it may not open again or be dragged asunder. If possible, leave the dressing until the wound is healed; in summer, however, and when wounds suppurate freely, the dressing should be changed frequently. The threads in the sutures are to remain until they drop off.

Cold water is not only serviceable in stopping the bleeding and cleansing the wound, but also in healing it afterwards. Put on a compress of linen, and dip it frequently in cold water—particularly when there is swelling, redness and pain. Or take lint, dip it in water, and cover the wound with it; put over this some oiled silk or gutta-percha tissue, or where these can not be obtained, paper that has been saturated with warm wax, or thick oiled paper may be used, and tie a cloth over it to keep the adjacent parts dry. As the heat abates and the wound heals, renew it less frequently, and when the heat is gone, discontinue it altogether.

All wounds which suppurate badly, are to be treated as ulcers—of which more will be said hereafter. Wounds of this kind must not be treated with cold, but with warm water dressings; 20 or 30 drops of tincture of *Calendula* put into half a cup of water, and the lint soaked with this solution, is best.

All lacerated wounds, and others which cannot be accurately united, must be drawn together and treated with cold water, unless they suppurate.

To all wounds over a bone, on the head, the breast-bone, the elbow, finger-joints or the knee, the shin-bone, the ankle, apply nothing but cold water without any tight bandage—unless in the beginning, to stop the bleeding,

you may make use of pressure; afterwards merely tie something over the wound to keep out the air, particles of dust, etc. All other applications are injurious, as they produce ulcers, which may sometimes eat into the bone. The remedies recommended for fractures, may, likewise, be applied externally in a diluted state.

e) *Remedies*.—By selecting in every case the suitable remedies, the cure will be considerably accelerated. As soon as the patient is at rest, give him one of the remedies prescribed for wounds. If, after such a medicine, the fever increases and is attended with dryness of the skin and great restlessness, give *Aconite*; but if the restlessness is accompanied by great excitement, *Coffea*; should the patient have lost much blood, give *Cinchona*; but if no great improvement takes place within six, eight or twelve hours, administer one of the following remedies:

Apis, if punctured wounds become red, very sensitive to the touch; particularly if the pain is burning, piercing, continuous, and if the redness spreads like erysipelas. If the redness runs down the inside of the arms or legs in interrupted stripes, *Rhus* is better, and afterwards *Arsenicum*.

Arnica, if the injury has more the nature of a bruise than of an open wound, if the parts affected are brown and blue, or become so; if the wound can be well united; if it was merely in the skin (remembering that the skin in some places is very thick).

Calendula, if the wound is lacerated, if it is a deep gash, whose sides can be but imperfectly united; if moving causes pain, even after the wound is dressed; if the skin or flesh has come off in pieces; if the wound looks torn and jagged; it answers for the worst kind of pains when *Hypericum* is ineffectual.

Staphisagria, if the wounds are clean, deep cuts in the flesh made by a sharp knife, or glass, or consequent upon surgical operations.

Hypericum is suitable for all wounds either from a thrust, a cut, bruise or tearing asunder; if the pain is unusually violent and particularly if it lasts long and is similar to a violent toothache, extending far around the wound and up through the limb. The same is indicated when children have spasms after every slight injury.

If bones have been injured at the same time, do not forget the remedies recommended before.

In these cases, *Arnica*, *Calendula* and *Staphisagria* should be administered externally in the following way:—Take a few drops of the tincture, dilute it in ten times the quantity of water, and with this moisten small pieces of rags and place them on the wound.

To persons who have a morbid skin, which is irritated by the slightest injury and suppurates, give *Chamomilla*; and should it do no good, *Hepar*. Sometimes it is necessary to give *Silicea*.

f) *Lock-jaw*.—When convulsive symptoms appear after an injury, and lock-jaw is to be apprehended, it is always best to send at once for a physician. But, if in this emergency none can be obtained, endeavor to render

assistance as you may be able. If a patient who has been wounded, complains of pains in the bowels, without any other cause, lock-jaw is to be feared. *Staphysagria* or *Colocynthis*, given according to the symptoms, may prevent it. If the patient complains of much pain in the neck, or of excessive stiffness in the neck and back, especially if this is preceded by a good deal of stretching of all the limbs; if he complains of cramp, or pain resembling cramp, in the joints of the jaw or in the cheeks near the ears; if he feels a constant inclination to yawn, and yet is unable to open his mouth sufficiently; if he is fretful, irritable, and difficult to please, give *Ignatia* until there is improvement. But if, after several doses have been taken, he grows worse, if lock-jaw takes place, if his back is stiff and rigid, give *Mercurius*; if this fails, *Belladonna*, especially if his face is red; *Aconite* if it grows pale and red alternately. In some cases, where the sufferer becomes very cold, *Bryonia* or *Veratrum* may be effectual; if warmth makes him worse, *Secale*. A person, not a medical man, will hardly be able to select the proper remedy among all those indicated. *Ignatia* is the principal remedy, and must be repeated every few hours, if the patient grows worse whenever he is touched or handled; if touching causes first more pain, and then makes the patient worse, *Cinchona*; if a nerve has been injured, or if the trouble has come after a severe fall on the back, *Hypericum*; if there first appears a redness around the wound, resembling erysipelas, *Ruta*, *Rhus*, *Hyoscyamus*, *Stramonium*, *Camphor*, or other medicines, may sometimes be the remedies. In general, it may be said that the choice of the proper medicine often depends on the most minute circumstances.

g) *Bleeding of the Gums*.—Frequently the gums bleed considerably after the extraction of a tooth. The application of vinegar in such cases is always injurious; endeavor to staunch the blood with cold water.

Instead of the always injurious styptics and the barbarous red-hot iron, Dr. Cartwright has recommended the following excellent plan:—"Insert a pledget of raw cotton, without force, into the cavity; apply a common tourniquet over the head, place the pad on the side of the cheek over the bleeding gum, the screw over the pad, and a few turns of the screw, without giving pain are sufficient." The rationale is: what was caused by the lacerating pressure from within out, must be overcome by a gentle, opposite pressure from without in. The ingenious inventor therefore says: "The true indication is, to contract the cavity by compressing with the fingers on every side of it, introducing previously a loose pledget of cotton or lint, for the sides of the cavity to contract upon; and in severe cases to resort to the tourniquet to make the lateral pressure."

If there is much pain and swelling, give *Arnica*; if fever, *Aconite*. If, in consequence of having taken cold, these medicines do not afford any relief, give *Rhus* or *Bryonia*. For throbbing pain in the bone, which is so violent that it can hardly be borne, sometimes attended with fever, *Hyoscyamus* will be beneficial. If the jaw swells, and a tedious suppuration follows, take *Silicea*.

h) Large Wounds on the Head.—When the bones of the head have been injured, or deep wounds have been received in the face, neck or chest, stabs in the abdomen, and all wounds where the joints have been crushed, or in which they have been penetrated, must absolutely be treated by a surgeon. We will, however, mention here, in a few words, the course to be pursued in case a surgeon is not at hand.

When a limb has been partially crushed, it may sometimes be preserved by cold applications, and by giving internally *Arnica*, and *Aconite* occasionally, if there is fever; this preservation is possible even when mortification has already taken place, by giving first *Cinchona*, and afterwards, when the skin begins to turn black, *Lachesis*. The surgeon alone can, however, judge what is best to be done, and we only propose this treatment, when the patient refuses to submit to amputation, when no surgeon who can perform the operation is to be procured, or when it is too late to undertake it.

i) Large Wounds in the Abdomen.—These wounds are often not so desperate as they appear to be; even if the bowels protrude and the whole belly is torn open, do not give up the patient. Recovery sometimes takes place contrary to all expectation, from wounds apparently fatal. Replace the entrails as soon as possible, but not without having first cleansed them of sand and dirt, or of whatever else may be adhering to them. This ought to be done with luke-warm water, by merely rinsing and without rubbing. Be careful that no water enters the abdomen. Do not lay hold of the entrails with your hands, but with a soft, clean, linen cloth. Let the patient neither smell nor take any spirits or anything strong.

If the patient is quite dull or stunned, give him *Opium*; if greatly excited, *Coffea*; if he has convulsions, *Ignatia*; if he turns pale, if the nose becomes pointed and the limbs cold, give *Cinchona*; but as soon as the first alarm is over, give, in all cases, *Arnica* or *Calendula*. When no surgeon can be procured, sew up the wound with a silk thread, and dress it, to prevent the air from penetrating, in the manner above described, without giving anything further. If violent colic ensues, which is also sometimes the case after surgical operations, give *Colocynthis*; afterwards, if worse, *Staphisagria*. If, after some days, very bad symptoms appear, give *Lachesis* or *Phosphorus*.

BURNS AND SCALDS.

For a superficial burn or scald, the best remedy is to hold the part to the fire, and the worst to put it into cold water, or to apply to it other cooling things, such as potatoes, carrots, turnips, etc. It is well known that after the latter blisters and ulcers will always follow. The former, on the contrary, draws out the heat, that is to say, the effects of the burn disappear by the application of moderate heat. The application of dry heat, however, is not, at all times, practicable; particularly when the burnt or scalded surface is large, as in this case the heat cannot be applied equally to every part.

For children the operation is too painful; and in burns when the skin is destroyed, or when the injury is in the face, it is also inapplicable. Other remedies, therefore, have to be used, which are of easier application, and of which the effect resembles that of heat.

If the burn be of any considerable extent, the patient should be first wrapped in a blanket and placed near the fire, and warm brandy and water should be given; after warmth has returned, attention should be paid to the burnt parts.

In many cases, when the scald or burn covers a large surface without being very deep, *raw cotton* is a very good remedy. It should be spread in layers over the burn. Blisters, if any have arisen, should be first punctured—a fine needle answers best for this purpose—and the sores washed with warm water. If the wound suppurates, take off the upper layer, but let the lower one remain, and put fresh cotton on the top; at the same time the whole limb must be properly dressed. The earlier the cotton is applied, the more efficacious it proves; but after the application of cold water or cooling roots, it is of little use.

Bicarbonate of soda (the simple cooking soda), spread on the burnt or scalded parts, and covered with a wet cloth, which should be kept wet for a considerable length of time, will speedily remove the pain and, if the burn be not too deep, will produce healing in a short time.

Soap is one of the best remedies both in superficial and deep burns. It is the more valuable as it is easily procured and applied, and will prove serviceable even after improper remedies have been used. Take white Castile soap, not the common resinous soap, scrape it fine and make a thick salve with luke-warm water, make a plaster of this by spreading it on pieces of linen or muslin, and cover the scalded or burnt surface with it, taking care that it comes in contact with every part. If blisters have already formed, puncture them as directed above, and cut off as much of the loose skin as possible, and dress the wound so as to keep the surface in contact with the plaster.

The dressing may be changed every twenty-four hours, by carefully removing the old plaster and replacing it immediately by a fresh one, without washing or otherwise interfering with the sore.

At first the application of the soap plaster will probably increase the pain; this, however, will be but temporary, and will soon be followed by a decrease in the suffering. This treatment should be continued until the sore is healed. The completion of the cure will, of course, depend upon the extent of the injury—but at all events it will take place much earlier than if you begin by applying cold water, lead-water, and such things to the burn. Slight burns and scalds will heal in two or three days, and bad ones in eight or ten. It will effect a cure even where the burn has penetrated to the bone; generally it prevents suppuration, and if skilfully applied, leaves no scars.

Lime-water mixed with sweet-oil, or equal parts of linseed-oil and lime-water, also make a very good salve for burns; it may be applied in the

same manner as soap, and may be used instead of that in case the latter proves too irritating.

In a very bad case of burning the hand with burning fluid (oil of turpentine and alcohol), when cantharides and soap were of no use, a salve, made of a solution of chloride of lime and sweet-oil, eased the pain immediately, and cured the hand in a short time. It is particularly applicable in hot weather, when suppuration follows.

In all cases keep the air, as much as possible, from the burn; do not, therefore, dress the wound too often, and leave it uncovered no longer than is necessary. Cover all the sore places accurately and carefully, and do not suffer the linen to lie in folds, lest it stick to the sore, neither attempt to remove the salve which adheres to the wound. Open the blisters where most water has collected, cut off the skin, especially where it is loose and shrunken, and tie the whole up tightly but gently, without using too much covering.

Cosmoline or *vaseline* are excellent applications in burns.

Cantharides.—The tincture of cantharides diluted, in the proportion of five to eight drops of the tincture to half a tumbler of water, is one of the most efficacious remedies for burns. It may be applied by dipping rags—those of linen are best—into it, and applying them to the seat of the injury, renewing them two or three times a day, or whenever the pain begins to get worse again.

It may be used in slight and severe burns, immediately after the reception of the injury or at a later period, after proper or improper remedies have been used.

Diluted tincture of the stinging nettle is a useful application; it is to be used in a similar manner to *Cantharides*. Cloths wetted with a solution of *Causticum*, the 3d or 6th dilution, may be applied in burns to lessen the pain and promote healing.

If nothing else is at hand, the violent pains may be mitigated by strewing hair-powder or powdered starch or flour upon the burn or scald.

For burns in the mouth, throat or stomach, caused by taking too hot food, or in the rectum, occasioned by taking injections too hot, dissolve a few globules of *Cantharides* in a cup full of water. Take a teaspoonful occasionally, and keep it in the mouth for a while; use this medicine also in the form of injections, but if it does no good, give *Arsenicum*, *Causticum*, *Sapo*, *Rhus* or *Carbo vegetabilis*. For small burns on the hands of workmen, the best remedy is gutta percha dissolved in oil of turpentine or chloroform.

Burns from sulphuric or other acids require lime-water, or chalk mixed with water; if caused by an alkali, vinegar will prove beneficial, or scraped apples.

In burns from phosphorus there is no better remedy than oil, sweet-oil especially; renewing its application until the pains cease.

If ulcers remain after burns they can be treated with the soap plaster recommended above, or with *Causticum* applied on cloths, which should not be removed, but kept continually wetted with the *Causticum* solution; if the

pains are very severe, and the ulcer begins to smell bad, use the chloride of lime and sweet-oil as mentioned above. •

For the fever which sometimes accompanies burns, give *Aconite*. *Arnica* should not be used in injuries of this kind. In convulsions arising from severe burns, *Chamomilla* has proved beneficial. Extensive burns are sometimes attended by diarrhœa or costiveness, but nothing should be done for either; unless the latter lasts longer than four or five days, when injections of warm water may be given. If the diarrhœa is attended with pains in the bowels, give *Pulsatilla*, afterwards *Sulphur*. The diarrhœa which sometimes makes its appearance is essential to the preservation of life, and ought, on no account, to be interfered with, unless it continues for weeks after the burn has been cured; then give *Calcareæ*, if it is more frequent between noon and midnight; *Arsenicum*, if more towards morning and in the forenoon. In most cases it will disappear of itself, if plenty of cold water be drunk, and frequent exercise in the open air is taken; both of which are necessary to restore persons who have been severely burned or scalded. If the hands and feet, or the whole body become much swollen, give *Calcareæ*.

Of the application of ointment of lead, or lead-water, I can only assure my readers that it has never done the least good; the horrid suppuration, ulcers, and dreadful scars which it leaves behind, could not be worse if nothing were done. To put a stop to the use of these abominable medicines among rational people, it cannot be too often repeated that the application of lead-water to any considerable part of the body (in case of a severe burn) almost inevitably proves fatal. Children who have been thus treated with lead-water, when half the body has been burned, have died in consequence—not, as is erroneously supposed, of the burns, but of the poison, of which the symptoms furnish incontrovertible evidence.

FROST-BITES.

Before going out into the cold, if one rubs the face, ears and nose with spirits of camphor, it will serve, in a great measure, to protect these parts from being frost-bitten. If the parts become frozen stiff, apply snow or cold water. Do not rub with snow the solidly frozen parts, for they may be injured by rough usage. It is only after they have been thawed that rubbing may be employed. The inflammatory redness following the thawing is best treated with camphor externally applied. Should this not soon relieve, use cantharides in the same way as recommended for burns. If pains in the bones remain after frost-bites, especially burning pains, *Ruta* helps.

When a person has been handling ice and has afterward violent pains in the hands and arms; if they burn and warmth relieves, give *Arsenicum*, sometimes *Carbo vegetabilis* is necessary; if warmth aggravates, *Secale*; if the limb becomes blue and black and swells, *Lachesis*. After being out in the cold and wet, drink coffee, and cold beer after being in a cold, dry

atmosphere. The consequences of exposure to cold and wet are often helped by *Rhus toxicodendron*; those of dry cold by *Aconite*; *Glonoine* helps both, especially the headaches.

CHAPTER X.

FOREIGN SUBSTANCES INTRODUCED INTO THE HUMAN BODY.

I. INTO THE EYE.

WASHING the eye with water will be beneficial if dust or any insoluble substance has got into it, but will be injurious if the substance is soluble, as the washing will only tend to diffuse it.

Rubbing the eye should also be avoided, as it merely increases the irritation. Press gently on the inner corner of the eye towards the nose, at the same time drawing the outer corner downwards. The tears will then wash the foreign substance towards the inner corner, from where it may be removed. Immersing the eye immediately in a vessel of cold water and holding it there, will frequently remove the cause of irritation and afford relief. Sweet-oil will mitigate the irritation, when acids or caustic salts have caused it; but it is injurious when caused by the powder of Spanish-flies, or dead insects. The white of eggs is very good when sharp, dust-like mineral substances, paint, or small pointed particles, get into the eye. For ashes, some kinds of dye-stuffs and perhaps tobacco, cream or sour milk is the best remedy. For lime, the eye should be washed with vinegar and water, or sweet-oil may be freely used.

If a hard substance gets into the eye and cannot be removed by the above means, but continues to cause irritation and pain, draw the eyelids apart, while at the same time the eye is slowly moved in every direction, and you can ascertain whether there is anything adhering to their inner surface; then roll up a bit of paper, so as to have a soft point, with this, as with a camel's-hair pencil, you may take away the offending particle. Fine blotting paper will answer best for this purpose, as the foreign body will more readily adhere to it. Should it be necessary to push the pointed paper far back under the eyelid, moisten it first with saliva.

In order to evert the upper eyelid, seize the eyelashes with finger and thumb of one hand, and press with a pencil or other similar body held in the other hand on the upper part of the lid, directing the patient to look

downwards. The lid is thus easily everted and any extraneous substance adhering to its lining membrane readily detected and removed.

CINDERS IN THE EYES.—A few grains of flaxseed placed in the eye will swell and envelope the cinder in a glutinous substance, and it may be soon washed out.

Particles of iron, particularly those projected hot into the eye, when striking fire, or from a smithy, usually adhere very tenaciously; sometimes you may succeed in extracting them with a lock of hair, introduced under the eyelid, and moved backward and forward, or with a clean ear-pick. A magnet is sometimes of use, and should be tried in case the other means fail.

One must remember that often when the foreign body has been removed, the sensation of its being present remains, and lasts for some time; and also that the sensation of a foreign body in the eye exists without one ever having been there; but the feeling is due to inflammation of the eye.

Rubbing is injurious at all times; in order to avoid it, put on a linen compress dipped in cold water. Sleep sometimes diminishes the pain. If the eye is red and inflamed after the removal of the foreign body, give *Aconite*, which is also of service if it cannot be got out, and will diminish the pain until you can procure a surgeon, or till the night is passed, when day-light will enable you to examine more closely. If, after giving *Aconite* several times, the eye continues sensitive and red, give *Sulphur*, and in case this does not prove efficacious, *Calcarea* or *Silicea*.

If the eyelids are spasmodically closed, and will scarcely let tears escape, *Belladonna* generally relieves; sometimes it will be necessary to give *Hyoscyamus* afterwards.

2. INTO THE EAR.

When an insect has found its way into the ear, place the patient upon the opposite side, and pour sweet-oil into the ear, until the insect becomes visible; then take it out with a small roll of paper or a pair of delicate forceps.

Extraneous bodies, such as gravel, shot, beads, cherry-stones, pieces of wood, peas, beans, pins, etc., are often put into the ear by children. If attended to before they excite inflammation and swelling, they can generally be removed by very slender forceps or by a hair-pin, the curved end of which has been bent so as to form an obtuse angle, like the heel of a spoon, and to which a handle has been made by sticking the points of the pin into a cork.

Place yourself behind the ear, draw it upwards and backwards with one hand, and at the same time away from the head, that you may look into it as far as possible; dip the instrument into sweet-oil, and pressing the bent part against the back part of the internal ear, push it in till it passes behind and around the object; then lift a little, and the end of the pin will take hold of it from behind, like a spoon, and bring it out.

If you cannot succeed in passing the hair-pin behind the object, you may sometimes be able to remove it by means of a small syringe, with a slender nozzle; fill it with warm water, pass the point of the nozzle alongside the object and inject the fluid with moderate force.

If with children, particularly if there is a round object in the ear, it is better to push the hair-pin along the back part of the internal ear; with grown persons it is generally better along the upper surface. When the object is visible it can be seen where best to insert the instrument; but if not visible carefully feel for it. If anything has been wedged into the ear, it may sometimes be removed by a second hair-pin, prepared as above, inserted opposite to the first and both drawn out together. In all the manipulations great gentleness and care must be used, lest the object be pushed further into the canal.

If pain and inflammation of the ear remain, give *Arnica*, and after a few hours, *Pulsatilla*. If the inflammation is already very considerable, and the ear-canal so much swelled that nothing can be got out, *Pulsatilla* is also of service. In some cases, when the children are in great pain, have much fever, speak incoherently, or are delirious, give, if *Pulsatilla* does not suffice, *Belladonna*, and afterwards, if there is still some pain left, *Sulphur*.

3. INTO THE NOSE.

Foreign bodies, if not very firmly fixed, may be removed from the nose by taking a full inspiration, closing the mouth, and expelling the air forcibly through the nostrils; or by tickling the nostrils with a feather, or a little dry snuff to bring on sneezing. Sometimes obstructions may be removed from the nose with forceps or by the same instrument recommended for the ear, or a similar one, but somewhat longer, or they may be pushed back so as to fall into the mouth. Do not make too many experiments, but rather apply to a surgeon who has the necessary instruments. The swelling, which will sometimes prevent the extraction of an object, or which remains after it has been extracted, may be considerably lessened by the administration of *Aconite*, and later, *Arnica*; or if these do not succeed, by *Belladonna* or *Rhus*. For the remaining pain and suppuration, if any exists, give *Sulphur*.

4. INTO THE THROAT (ÆSOPHAGUS).

If a foreign substance lodges in the throat, endeavor to make the patient throw it up, by beating him between the shoulders; let him open his mouth, press down his tongue with a spoon and look into the throat, in order to ascertain whether there be anything that can be seized and brought out with the fingers. Blowing into the ears is said to produce reflex action in the

throat or gullet, and so the foreign object is forced out. See "Larynx or Windpipe."

If, after the object has been removed, the sensation as if it were still there remains, particularly after pointed substances, it shows that a wound has been made, and all acrid or highly seasoned things must be avoided in food and drink.

If a large piece of food remains fast in the throat on account of its size and hardness, it is advisable to excite vomiting, particularly if upon retching, you perceive the obstruction move upward. Tickling the throat will sometimes effect this, if not, put snuff on the tongue, or give an injection of tobacco. When it can be felt on the outside of the throat, a gentle pressure upward may force it out. At first you ought to endeavor to make the sufferer throw up again whatever has been swallowed, but do not proceed with too much violence. If the substance has already descended so far that it cannot be felt in the throat, and it seems as if it were sticking fast in the chest, it must be forced down into the stomach, particularly if it is soft, smooth and soluble, and is only arrested on account of its size. If the sufferer feels that at times it slips down, it should be allowed to glide of itself into the stomach, or be assisted by occasionally swallowing a little water, provided it is a substance which will not swell; otherwise a little melted butter or sweet-oil. If the symptoms, however, become too troublesome, endeavor to push it down. For this purpose take a smooth, willow twig or a long piece of whalebone, scraped perfectly smooth, and tie to the end of it a bit of sponge. To be able to fasten it on well, cut a few notches in the stick, and use waxed thread or silk. Rub some sweet-oil on this instrument, and introduce it cautiously into the throat, pushing gently against the back of the throat.

If a contraction of the gullet takes place, which prevents the substance from being moved, or if pains, difficulty of breathing, and other symptoms make their appearance, give *Ignatia*; and if this fails to relieve, *Chamomilla*; then sweet-oil or butter; and after this, try again to push the substance down; if the face is pale, if there is nausea, worse after speaking, give *Cocculus*; if the face is red and if there is a constant inclination to swallow, *Belladonna*.

Frequently the sensation of something sticking in the throat will remain, although the substance has already descended into the stomach. This, however, is of no consequence, and will disappear of its own accord, or after medicine. You may judge that this is the case when the pain increases no longer, but remains the same, and when no other symptoms appear; also, when soft or fluid things can be swallowed without coming up again, and which, when passing the sore spot, produce some pain, without making it much worse. In such cases give *Arnica*, and afterwards, if necessary, *Mercurius*, or one of the medicines prescribed below. If the patient feels as if a small splinter or fish-bone were in the throat, give *Hepar*. But if, on the other hand, there are small particles still remaining in the throat, producing constant irritation, give *Silicea*.

If a bone remains in the throat, which is so large that it cannot go down, extract it in the manner recommended below, or let a surgeon be called in.

With sharp, pointed articles, such as pieces of glass, fish-bones, small bones, needles, etc., be cautious and use no violence. Frequently swallowing a large mouthful of slightly chewed bread, potatoes, figs, dried prunes, etc., will remove them; or if they are small pointed articles, which have pierced the tissues, pills of wax as large as a musket-ball, dipped in honey, those made of wax fresh from the hive, and rolled in honey until they become round and smooth, are to be preferred.

When dangerous symptoms, such as violent pain, retching almost to suffocation, great anguish, fits, etc., occur, hasten to remove the obstruction, or at least to loosen it. A violin string, or a fine wire, bent in the middle so as to form a small loop, will answer this purpose. It must be introduced in such a manner that the ends of the sling or loop are out of the mouth. Push it forward gently until it is below the painful spot, then move it up and down, and twirl it around several times, and draw it up again slowly. In some cases a piece of whalebone, or a small willow twig, as described above, will answer better. This should be introduced with a rotary motion, until the dry sponge is below the object, then give a mouthful of water, and after the sponge has swelled a little, draw it up slowly. A feather tied to a strong thread, may be pushed, quill foremost, down the throat, so that the feathery part when pulled up, may press against the sides, and on being turned several times may loosen and bring up the foreign body. Pins, needles, fish-bones, etc., may sometimes be extracted by tying to a whalebone or willow twig a number of silk slings, made like those for catching birds, introduced in the manner above described, and turned round several times. A piece of fat meat—bacon—tied to a string, and swallowed, and pulled up again by the string, has also been used successfully.

Splinters of glass may be removed from the throat, by taking two or three inches of the upper end of a tallow candle, fastened to a string by the wick, compelling the patient to swallow it and then drawing it up again; this may be repeated several times if necessary.

Fish-hooks, with a part of the line attached to them, have been swallowed and successfully removed by drilling a hole in a leaden bullet, passing the line through it and causing the patient to swallow it. The weight of the bullet disengages the hook, and its point, coming in contact with the lead, will prevent it sticking again in the œsophagus in the act of drawing upon the line, so that both bullet and hook may be drawn out together.

In performing operations of this kind, the patient should be seated on a chair, with the head thrown well back, and supported from behind by an assistant; then press the tongue down with the fore-finger of the left hand, and introduce the instrument, previously oiled, slowly and carefully, pressing against the back part of the throat. By the sudden resistance, or the convulsive motion and pain of the sufferer, you may know that the instrument is near the obstruction, or at the painful spot. In pulling it up, be careful

not to strike against the larynx, and lose again what you have brought up. Rather press the instrument a little against one side, and bend the head quickly forward, as soon as the end of the instrument reaches the top of the throat.

In very dangerous cases, where even the experienced practitioner is unable to afford relief, the last alternative is to make an incision in the throat, by which, sometimes, persons have been saved who were supposed to be suffocated. Of course this must not be attempted, except by the surgeon.

5. INTO THE STOMACH AND INTESTINES.

The introduction into the stomach of foreign bodies, such as buttons, coins, rings, etc., a matter of a frequent occurrence with children, and which is generally the source of great deal of uneasiness to the parents, is not usually followed by serious consequences; as they sooner or later pass off through the bowels without much pain or inconvenience, unless they are too large to do so, in which case they may cause very serious disturbances or death itself.

Their passage through the bowels may be facilitated by eating plentifully of boiled rice, porridge, or some farinaceous food which will in its passage distend the stomach and intestines and help to carry off the extraneous substance. Rubbing and kneading the abdomen softly, or lying on the belly, frequent exercise, without using violent exertion, may also accelerate this event. A person who is disposed to be costive should take no aperient medicines, which only weaken the intestines, but should eat light food, plenty of butter, and have, daily, an injection of water or milk administered.

In order to ascertain whether the article swallowed has been discharged, the excrement may be allowed to fall into a vessel containing water, and after it has dissolved, should be strained through a sieve or basket; or, if needles have been swallowed, through a coarse cloth. Needles sometimes make quite a different passage for themselves, and come out without causing any injury; if they remain too long, *Silicea*, to be followed later by *Ilepar*.

If, some time after needles or coins have been swallowed, bad symptoms make their appearance, such as violent pains in a particular part of the abdomen, as if something were wedged there, give *Ipecacuanha*. If it does good, repeat it as often as the symptoms get worse again; if not, give *Veratrum* or *Nux vomica*. Should, notwithstanding, more violent symptoms, severe colic and constipation appear, give *Opium*, frequently repeated; if violent attacks occur, with a throbbing pain in a particular spot, as if suppuration was about to commence, give *Lachesis*.

Sometimes articles which have been swallowed pass through the intestines without any difficulty, and remain in the rectum. The passage from thence will be assisted by injections of linseed-oil, olive-oil, or milk; or by the insertion of long, thick strips of bacon into the rectum, one half may be

allowed to hang out, or they may be held by a thread; in this way the bacon protects the anus against the hard substance. In this manner the latter is frequently extracted with much facility, particularly if somebody assists with a piece of rounded whalebone or with the handle of a silver spoon. If you cannot succeed with this, send for a surgeon, and let him examine the parts; but have recourse to no aperients, which may prove dangerous. If the anus closes convulsively, give *Ignatia*, *Belladonna* or *Lycopodium*.

Leeches, inadvertently swallowed, give rise to painful consequences, as burning pain in the stomach, hiccough, spitting of blood and slow fever, which reduces the patient visibly. These consequences may be prevented or removed by the immediate administration of a quantity of common salt, dissolved in water, and occasionally melted butter. In children, sugar will sometimes relieve the symptoms. For the remaining symptoms, if any, give *Arnica*, and, some days after, *Arsenicum*.

When other live creatures find their way into the stomach, if insects, let the patient swallow some sweet-oil or fresh salted butter; and if that fails to relieve him, a bit of camphor, the size of a pea, ground up with oil. When worms, snakes, frogs, etc., get into the stomach, let the patient drink sugar-water and eat sugar, until it acts as a laxative, or take an emetic of mustard and warm water. The bad effects remaining after the emetic has produced its action, will be obviated by smelling camphor, and giving *Ipecacuanha* several times, or *Nux vomica*.

6. INTO THE LARYNX OR WINDPIPE.

When a person talks or laughs when swallowing, or breathes in quickly, whilst holding something in his mouth; or when children, in their play, hold something in their mouth, and it gets into the larynx or windpipe, ("going the wrong way," as the phrase is,)—beating with the flat hand on the back whilst the sufferer bends forward, or blowing snuff up the nose to induce him to sneeze, or tickling the throat with a feather to produce vomiting, relieve sometimes, but only in trifling cases; and it sometimes makes matters worse. Neither too many nor too violent attempts of this kind ought to be made. In the beginning you may cause the head to be bent back as far as possible, or else forward, that the object may be brought up by coughing. Yet not much can be expected from this, if the foreign substance is firmly fixed in the windpipe. You may sometimes ascertain whether there is anything actually in the larynx, by taking hold of the latter and shaking it very gently with your thumb and forefinger once or twice; the obstruction will rattle, if it is loose or sufficiently large. Sometimes the patient will fall asleep, and whilst in that state the extraneous body may be dislodged (the head in this case should not be too high).

Some foreign bodies have been removed by gently turning the patient upside down; the intruding substance will then sometimes fall out by its own weight.

If the danger, however, should continue to increase in spite of these means, and the medicines hereafter recommended, an operation must be performed. Hasten, therefore, to call in the nearest experienced surgeon who knows how to make the incision in the windpipe—the only means which can save the patient, and which sometimes succeeds even when he appears already suffocated. This operation, if properly performed, is by no means so dangerous and difficult as it would appear, for most of those who are operated upon recover; and even when the windpipe has been severed in an attempt at suicide, the patient is not unfrequently restored. It is, therefore, unwise not to have recourse to this operation, if a skilful surgeon can be procured in time.

As the symptoms frequently resemble those of obstruction in the throat, you should always look into the mouth, whilst pressing down the tongue, and try if you can feel anything with your fingers or a spoon; also try with whale-bone or a willow twig whether you can feel any substance in the throat.* You may likewise know by the following signs, that there is something in the windpipe: the pain is more towards the front, so that the sufferer can point it out with his finger; when the obstruction is in the throat, the pain is more back or at one side. There is great difficulty in swallowing and breathing in both cases, but when the windpipe is obstructed, the breathing is particularly difficult, the face is bloated and purple, the eyes protrude; the voice is more affected, becomes hoarse, or is lost altogether; the cough is whistling or rattles, and threatens to terminate in suffocation.

The symptoms, in some cases, do not at first appear to be of great consequence, but they increase gradually, or sometimes they disappear altogether, and return with greater violence.

If the foreign substance is not located in, but below the larynx, and respiration is not impeded by it, the patient may seem to be in good health for days and even for weeks, without experiencing any cough or other symptoms. Suddenly, however, he will be taken with violent fits of coughing almost to suffocation, the attacks resembling those of croup. In such cases if *Tartar emetic* or *Silicea* do not afford immediate relief, there is little hope remaining. Neither will an incision always avail, if between the attacks of coughing, the respiration becomes more and more difficult and heaving. By this time the lungs have become congested, and the sufferer will often die whether an opening be made in the trachea or not.

If the patient improves, but is not entirely restored; if the symptoms return several times; if there is a rough, hollow cough, particularly at night or after certain motions, a bad odor from the mouth, the breath exhaled from the lungs is very offensive, or a constant cough appears as in consumption, give *Silicea*. It has cured many of the worst cases. If the symptoms change without improving, and the cough grows worse towards morning, give *Hepar*.

* See Section 4: "Foreign Bodies into Throat."

After having ascertained that the obstruction is in the windpipe, give, at once, *Ipecacuanha*, repeating the dose if it affords relief, as often as the symptoms become worse again. Nothing besides this but sugar or sugar-water should be given, until medical aid can be procured. *Belladonna* may also have a good effect. When the patient falls asleep, do not disturb him; and if the symptoms reappear, do not immediately give a fresh dose, but wait until they are really worse. Sometimes the object is ejected during sleep. If *Belladonna* does not suffice, or if symptoms remain after the danger is over, you may give *Hepar*. If, despite of all these remedies, the patient should be in danger of suffocation, give *Tartar emetic*; when the patient becomes purple in the face, *Opium*.

When dust has been inhaled, which causes violent cough, or hairs or feathers have got into the windpipe, *Belladonna* will be of service; afterwards *Hepar*. The relief will, however, be but gradual. It is well to give at the same time some sugar or gum Arabic.

If anything has got into the throat of a child, and is located in or near the upper part of the larynx, frequent attacks of a suffocating cough will ensue, which *Tartar emetic* will greatly relieve. If the attacks return continually, or if there is a cough attended with an offensive smell, give *Silicea*. In almost all instances gradual improvement will thereby be effected, the patient getting rid of the obstruction by coughing, or by swallowing it. In tedious cases *Hepar* may be given after *Silicea*.

7. INTO THE SKIN.

When any large substance gets under the skin, proceed as recommended under the head of "Wounds." We shall only mention the best means of removing small, pointed particles, such as thorns, thistle-prickles, chestnut-burs, great numbers of which sometimes stick in the skin. In case they cannot be extracted with a pair of pincers or tweezers, or by some sticky substance applied as a plaster to the skin and taken off, bringing the offending points with it, put oil on the spot, then take a common knife, not too sharp, and scrape the skin slowly, applying the whole blade, as in shaving, and bear on moderately hard. If the thorns have entered obliquely, scrape the skin in such a direction as to press first upon the points. Continue this operation, applying oil constantly, until everything is extracted.

The same method may be pursued when splinters of glass get into the skin; but this is very painful, and it is mostly better to let them come out by suppuration, if they cannot be extracted with the forceps, applying poultices to hasten the suppurative process. For the inflammation which sometimes ensues give *Arnica*; for the suppuration *Hepar*, followed, if necessary, by *Silicea*, and in case the suppuration should be profuse, and the wound become deep, and neither *Silicea* nor *Hepar* bring about improvement, give *Lachesis* or *Mercurius*.

When persons have been foolish enough to use blisters or mustard plasters, hoping that these may relieve, particularly if their skin is very sensitive, or if the plasters remain too long, it is necessary to use a remedy. If a fly blister has been used, give *Camphor*. See "Animal Poisons." For mustard you may apply soapsuds or tincture of stinging nettles, very much diluted with water. The quickest relief will be obtained by excluding the air and taking internally a dilution of stinging nettle tincture.

PART SECOND.

THE TREATMENT OF DISEASES.

CHAPTER I.

AFFECTIONS OF THE HEAD.

GIDDINESS sometimes arises from causes which medicine may remove; such are: disordered stomach, profuse evacuations, ardent spirits, narcotic medicines, and falls or blows on the head. Sometimes it is connected with other complaints, and can only be removed by attention to the general health of the patient.

A person who is subject to giddiness should be moderate in eating and drinking—should rise early, walk frequently in the open air, and use now and then the flesh-brush in the evening.

GIDDINESS, VERTIGO.

Aconite relieves giddiness with nausea, eructations, vomiting, etc.; later *Pulsatilla* or *Antimonium crud.*, if there be disordered stomach.

Vertigo while eating or after a hearty meal is always an alarming symptom. Temperance in eating and drinking and a dose of *Arnica* in the morning will often relieve; sometimes *Nux vomica*, *Chamomilla*, *Pulsatilla*, *Rhus* or *Cocculus*, according to the disposition of the patient, will be beneficial. Abstinence from wine and liquors of all kinds is also requisite.

Sulphur or *Calcarea* sometimes cures the giddiness, which is a serious symptom, resulting from the suppression of old ulcers.

Mercurius, if the dizziness appears only in the evening and is accompanied by dimness of sight; *Belladonna*, if there is sparkling before the eyes, particularly when moving, increased by stooping; afterwards *Calcarea* if necessary; *Cocculus*, for vertigo, which is increased by sitting upright in bed. *Phosphorus*, if the giddiness is accompanied by headache and a feeling of pressure on the top of the head.

Giddiness from close thinking is relieved by *Nux vomica*, from looking up, by *Pulsatilla*, or still oftener by *Nux vomica*; particularly if the patient becomes unconscious or on lying down in bed, he feels as if he were being turned backward like a wheel; on moving—better when lying—*Cinchona*; on lying down, *Rhus*; on rising, *Chamomilla*; only after stooping, *Aconite*, and afterwards, *Belladonna*, or *Calcarea*; from riding, *Hepar*, and afterwards, *Silicea*; when sitting, *Pulsatilla*.

Giddiness, with partial loss of consciousness, or agitation, *Belladonna*; so bad as to make the patient apt to fall, or fear that he is going to die, *Rhus*; with buzzing in the ears, headache, heat or paleness of the face, dimness of the eyes, *Pulsatilla*; worse when at rest, while standing, sitting, and when first closing the eyes on lying down, darkness before the eyes, with headache, nausea or sneezing, *Apis*; with weakness in the head, *Cinchona*; with bleeding of the nose, *Sulphur*; with fainting, *Chamomilla*, subsequently, *Hepar*.

WEAKNESS OF MEMORY.

Weakness of memory, from bleeding, purging and other debilitating causes, is removed by *Cinchona* or *Lachesis*; in old people, who are always chilly, who easily take

cold, and who always likè to stay in the house, *Nux moschata*; if they like to be in the open air, though they take cold every time, *Cepa*; that from blows on the head, *Arnica*; from spirituous liquors, *Nux vomica*; from fright, anger, vexation, select among the remedies recommended in Part I., Chapter I., particularly *Aconite*, *Staphisagria* and *Veratrum*; and after taking cold, *Rhus*, or *Carbo vegetabilis*; with determination of blood to the head, particularly *Aconite* and *Belladonna*; if one cannot fix his thoughts upon one particular thing, *Apis*; and among the remedies prescribed for these causes, *Cinchona*, *Rhus*, *Mercurius*, or *Sulphur*.

Benefit will be derived from washing the head every evening with cold water, and tying a handkerchief around it; and every morning washing the forehead and eyes in very cold water. A better remedy, perhaps, is, just before going to bed, to place the feet, up to the ankles, in very cold water for one or two minutes, after which let them be rubbed well with a coarse towel.

DETERMINATION OF BLOOD TO THE HEAD.

This is a very troublesome, and when of long continuance, a dangerous complaint. If the arteries in the temples can be felt to beat as the pulse beats; the veins of the head and neck are swelled, the head feels full; giddiness takes place frequently, particularly when stooping or when walking in the sun; if the head above the eyes feels like bursting—worse when stooping and coughing—give *Aconite*. Short cold foot-baths are also of benefit. At the same time abstain from coffee, wine and ardent spirits, and be moderate in the use of warm drinks—but drink freely of cold water, and wash the neck and head frequently with it. If it comes on suddenly, the brain feeling as if expanding, becoming larger and larger, with heat and beating in the head, particularly in the temples, extending at every step down to the neck, give *Glonoine*.

If this should not afford relief, and the patient is very irritable or passionate—has drunk much ardent spirits, or has been much confined, give *Nux vomica*.

Belladonna, if there are severe jerking, burning, shooting pains on one side of the head or violent pressure in the forehead at every step or motion, increased by stooping, or even by noise, or the glare of light.

Aconite, if accompanied by sparkling, flickering before the eyes, seeing double, buzzing in the ears, frequent fainting, stupid, heavy sleep; if children are teething, or when girls have arrived at the age of puberty, or if they have caught cold during menstruation, particularly from wet feet; *Belladonna* may be given afterwards.

1. CAUSED BY JOY OR EXCITEMENT.—If occasioned by excess of joy, or accompanied by great excitement, give *Coffea*; after a fright, *Opium*; after vexation, *Chamomilla*; after suppressed vexation, *Ignatia*; after anger, *Nux vomica*, as mentioned before, when treating of these causes. When caused by a fall or blow upon the head, *Arnica*. The bleeding from the nose which is apt to accompany it, should not be interfered with.

2. CAUSED BY DEBILITY.—If the determination of blood is caused by great debility, give *Cinchona*; if it returns each time after taking cold, *Dulcamara*; if it returns after lifting something heavy, or after work in which the arms are raised and stretched, *Rhus*; when at the same time the patient perspires too easily, and too much, *Mercurius*; if he feels cold, let him smell camphor a few times. If, in spite of all these remedies, it returns, give *Sulphur*, if the patient has not already had this medicine; if so, give *Hepar*, and if this fails, *Silicea*.

If the first mentioned medicines do not speedily afford relief, and there appears to be danger, make a poultice of oatmeal and wrap it quite warm around the feet; or bathe the feet in very warm water, and repeat it fre-

quently until there is an improvement, or until a feeling of chilliness comes on; if the bowels are constipated, give injections of milk-warm water.

HEADACHE.

V, v

In the treatment of this common complaint, we may frequently be guided by the causes which produce the pain, or by the complaints which accompany it; it is, however, necessary to distinguish the different kinds of headache, as the same medicine may prove beneficial or injurious under different circumstances.

1. HEADACHE FROM DETERMINATION OF BLOOD TO THE HEAD, or from inflammation, is usually throbbing, and is attended with heat, the arteries in the neck may be seen to beat; if the pain increases, vomiting ensues; the headache becomes worse after shaking or moving the head, lying down and stooping; sometimes better when standing. Among the domestic remedies, vinegar is the best; place crusts of bread, which have been soaked in vinegar, on the temples, and give injections of warm water; if this does not afford relief, add some vinegar to the water; bathe the feet in warm water, and afterwards rub them with flannel. Persons who are liable to this complaint should accustom themselves to drink plenty of cold water, and rub the head every morning with a cold, wet cloth, particularly the forehead and temples, and bathe the feet in cold water every evening before going to bed.

In such cases it is customary with some physicians to apply ice, sometimes in a bladder. As cold water (if necessary, made cold by ice, and applied to the head with pieces of cloth) will afford all the relief that can be expected from cold applications, it is just as absurd to expect more from ice as it would be to attempt to cure a headache which is relieved by pressure by knocking the patient on the head with a club. No patient ought to allow his physician to do such a thing; the results are always bad, and sometimes dangerous.

Give *Glonoine* when the attack comes suddenly, where the blood is felt rising up into the head, with severe beating pain, as if bruised; worse when shaking the head; relieved by cold water applied externally; very rapid pulse, eyes and face red, or the eyes are staring and glassy, the face pale and moist, a buzzing or crackling in the ears.

Aconite may be given and the vinegar discontinued, when the pain is very severe, with a burning sensation

over the whole head, particularly in the forehead; the face red and bloated; the eyes red; when the pain is accompanied by incoherent talking or raving. If there should be but little or no improvement, *Belladonna* may be given.

Belladonna is especially indicated when the pain is deeper seated, is oppressive and heavy, and the face pale and haggard, with unconsciousness, incoherent talking, murmuring, drowsiness.

Pulsatilla is preferable when the pain is dull, oppressive, on one side only, very harassing and weakening; if it commences in the back part of the head or at the root of the nose, and goes back into the head; is mitigated by pressure; is worse when sitting, better when walking; if the head is heavy, the face pale, with dizziness, agitation, inclination to cry.

Rhus, when there is burning, throbbing pain, with fullness of the head, oppressive weight, crawling, shaking and swashing, as if everything in the head were loose, and particularly when it comes on after meals.

If such a headache makes its appearance after meals, with great drowsiness, stiffness, and pains in the back of the neck, the speech being thick, or the face distorted, the mouth drawn to one side, the limbs falling asleep, send at once for a physician, and until his arrival give *Belladonna* or *Nux vomica*, according to the indications; bathe the feet in hot water, and otherwise treat the patient as recommended under "Apoplexy." *p 444 5-*

2. HEADACHE CAUSED BY CATARRH is mostly in the forehead; is oppressive, burning, better in the morning, worse in the evening, the eyes being full of tears, with sneezing, dry heat in the nose, frequent chills, sometimes a little cough; in this case it is advisable to draw warm salt water into the nose, and drink cold water before going to bed.

Aconite should be given for this kind of headache, if it is better in the open air, but worse when talking.

Cina, if it is worse in the open air, when reading or thinking, if it presses like a weight, is drawing and tearing, the nose commences to run, burns or itches, and is stopped up; *Nux vomica*, when the nose discharges freely by day but is stopped up at night; *Arsenicum*, if there is running from the nose, the discharge being acrid, burning, if it causes hoarseness, restlessness, and is accompanied by buzzing in the ears, throbbing in the forehead, nausea, is better out of doors or in a warm room. *Cepa*, if worse at night and in the room, better in the open air, with scintillation before the eyes, fullness and heaviness in the head, particularly in the back of the head. For other remedies, see "Catarrh."

3. HEADACHE FROM RHEUMATISM.—Rheumatic pains are tearing and drawing, changing their situation frequently, going to the neck, ears and temples. The head is sensitive to touch, and hurts on moving it; the pains are worse in bed, particularly toward midnight; sweating often occurs; small swellings arise here and there; if vomiting happens, the symptoms are ameliorated; warm footbaths sometimes help; so does inhaling warm vapor through the nose, also combing the hair.

Chamomilla is the best remedy. If this fails to give relief, and the patient becomes peevish and angry, is very restless, often changing his position, give *Nux vomica*; if he is obliged to lie still, groans, or screams, cannot bear light or sound, give *Belladonna*; or *Pulsatilla*, if he is chilly, inclined to weep and is sick at the stomach.

Ipecacuanha will be of service when the pains are more of a gouty character, (that is, the gnawing and tearing are more intense) and are relieved by heat and vomiting.

Ignatia when but little relief is experienced from *Ipecacuanha*, and particularly when the worst pain is over the

nose, or is boring, piercing, tearing, deep in the head, and better when stooping or lying down.

Nux vomica when there are shooting pains in the side of the head; worse in the open air, or when stooping.

Colocynthis will sometimes relieve rheumatic pains of the severest kind, after the failure of other remedies, particularly when hard pressure helps; but if relief is not obtained from this medicine, drink some coffee without milk.

Sulphur may be used when there is tearing, piercing, beating on one side of the head, particularly if it recurs every week, with vomiting and desire to lie down.

For rheumatic gout in the head, when the pains are tearing and beating all over the head, with a sensation as if it were coming apart, with agitation, restlessness, tossing about, nausea, belching and retching, *Ipecacuanha*, *Nux vomica* or *Bryonia* will sometimes afford speedy relief, or *Sepia* when these are insufficient, particularly when every change of weather brings back the headache; when there is a pressing, burning pain which causes vomiting.

4. HEADACHE FROM DISORDERED STOMACH AND BOWELS.—When produced by undigested food, strong coffee without milk or sugar is very useful; but if by a deranged stomach, give the remedies recommended under that head; if the bowels are constipated, injections of warm water will give relief.

The symptoms accompanying this kind of headache are: a furred tongue, bad taste, entire loss of appetite, nausea or vomiting, coming on at an early stage, and increasing with the pain. If, on the contrary, the headache is of a neuralgic character, it produces nausea and vomiting at a later and intensely aggravated stage. If headache is the cause of the sickness of the stomach, give the remedies for headache; but if the disordered stomach is the cause of the headache, give the remedies for disordered stomach.

5. HEADACHE FROM CONSTIPATION with determination of blood to the head is often relieved by *Bryonia*, *Nux vomica* or *Opium*.

Nux vomica will be indicated if walking or moving the head makes the brain feel sore, when there is pressure in the temples, and neither sitting up nor lying down gives

relief; the eyes are dull, with inclination to shut them, and nevertheless sleeplessness; the head feels heavy, particularly when moving the eyes; feeling as if it would burst during mental application; worse in the morning, in the open air, or after meals; and particularly after coffee, or when there is a loathing of coffee.

Bryonia when the head feels as if pressed together from both sides; and on stooping, as if everything would fall out of the forehead; the nose bleeds, without affording relief; and the eyes water and burn.

Opium if the pain is violent, with a tearing, bursting sensation in the forehead, visible throbbings in the temples, considerable congestion of blood to the head, restless look of the eyes, much thirst, dryness of the mouth, sour eructations, inclination to vomit, and even foul and offensive vomiting.

Mercurius will frequently suit, after *Opium*, when the head seems full to bursting, as if tied with a bandage, worse at night, tearing, burning, boring, shooting pain.

Pulsatilla when the pains are only on one side, with little determination of blood, with shivering, no thirst; the patient is of a mild and quiet temperament, inclined to weep, and is agitated.

Ipecacuanha if nausea begins when the headache does, if every part of the head to the very tongue feels as if bruised, if there is vomiting or retching. *Veratrum* will be beneficial if continued costiveness occasions a determination of blood to the head, with pains on one side, oppressive throbbing as if the brain were bruised, with sensation as if compressed, which also extends to the throat, or with stomach-ache, with painful stiffness of the neck, frequent emission of pale-colored urine, nausea and vomiting.

Lycopodium and *Sepia* should also be thought of.

6. SICK HEADACHE.—*Sanguinaria* will give relief if the

pain comes on periodically, or if it begins in the morning and lasts till night, with a fullness of the head, as if it would split, or as if the eyes were pressed outwards; if the pain begins in the back part of the head and finally settles over the right eye; or if there is a digging, shooting, stinging, beating pain throughout the head, but more in the forehead and worse on the right side, attended with chills, nausea, vomiting, inclination to lie down, and if the symptoms are made worse by motion.

Belladonna is the next best remedy, when the pains are worse on the right side, when the external part of the head is very sensitive, the veins of the head and hands being swollen,—painful sensation as of waves in the head, buzzing in the ears and dimness of vision. It is likewise beneficial for the worst pains, extending to the eyes and nose, in one side of the head, with a pressing, bursting, waving, splashing sensation, augmented by every motion, by turning the eyes, by a bright light, by every noise, the sound of steps, in fact at every concussion; when there is a jolting sensation in the head and forehead at every step, or on going up stairs; also when the pain returns every afternoon, and continues till after midnight, aggravated by the warmth of the bed, or on lying down; worse when in a draught. Also, in pains which commence very gradually, changing to an acute pain, affecting half the head; sometimes piercing momentarily, but so penetrating and severe as to deprive the sufferer of his senses.

Aconite is often indicated, but if it does not relieve after several hours give *Belladonna*, after which wait for some hours, and if the sensation as if water were splashing in the forehead does not gradually subside, give *Platinum*, particularly if the patient has a feeling of coldness in the ears, the eyes, in one side of the face, and around the mouth, or there is a trembling or flickering before the eyes and things look smaller. Or *Mercurius* may follow *Belladonna* if the pain tears down into the teeth and throat,

with shooting pain in the left ear only, or if it is always excessively violent during the night with night-sweats, which do not relieve. After *Mercurius* (sometimes, also, after *Belladonna*), *Hepar* will occasionally be beneficial where there is a pain as if a nail were driven into the head, violent boring in the head, nocturnal pain as if the forehead would burst, and if painful lumps appear on the head.

Apis is best, if the head feels too full and too large, with heaviness and pressure in it, especially when rising from a sitting or lying position, always increased in a large room, and relieved by being squeezed with both hands; also, if the eyes are affected; at night, chilliness from every slight movement, face and hands hot; if accompanied by nettle-rash, with burning, prickling, itching, or if the rash suddenly disappears, or if different parts of the patient's body are very sensitive to the touch.

In obstinate cases, when the pain is particularly violent over the right eye, piercing and boring, so that the patient screams, with nausea and vomiting, worse when shaking or moving the head, even when stooping, give *Sepia*. For the same pain on the left side give *Aconite*, and if no better after several hours *Sulphur* or *Silicea*.

Spigelia is suitable for the worst pains on the left side, if they are attended with an insupportable beating in the temple, and with pain in the whole left side of the head, and sometimes pain in the face and teeth, increasing as the sun mounts in the sky, or augmented by stooping and motion, in the open air, with the greatest sensibility to the least noise, and if attended with a fetid odor from the mouth.

In selecting a remedy, the following special indications may be taken as a guide:

Belladonna, if the pain is accompanied with great sensitiveness to the light.

Spigelia, if the pain is accompanied with great sensitiveness to noise.

Sanguinaria, if the pain is accompanied with great sensitiveness to the walking of others in the room.

Sulphur or *Aconite*, if the pain is accompanied with great sensitiveness to all kinds of odors.

Sepia, if the patient dislikes to be touched, complains of his bed, is very sensitive to and made worse by thunderstorms; cold air, vexations, etc.

7. NERVOUS HEADACHE.—The head is generally cool, the face pale; in the beginning the patient sometimes passes colorless urine; vomiting gives relief; the headache returns frequently on one side only, or is boring, as if produced by a nail, in particular spots; touching the head increases the pain. Lying down quietly in a dark room mitigates the pain during the paroxysms; it may be prevented by frequently washing in cold water, by rubbing and brushing the skin, and by using the medicines indicated below. Drinking coffee is so injurious in this kind of headache, even if it should give relief during the attack, that the patient must abstain from it entirely.

Coffea will give relief in violent, drawing, pressing pains on one side of the head, as if a nail were driven into it; or, as if the brain were shattered, crushed and torn, recurring on the slightest occasion, after close thinking, vexation, taking cold, eating too much, etc., with a distaste for coffee, sensitiveness to the least noise, even music; the pains appear intolerable, making the patient fretful; he is almost beside himself, shrieks and cries, tosses about, feels much agitated, dreads the fresh air, and is chilly. This remedy may be repeated frequently, and sometimes it may be followed by *Nux vomica* or *Cinchona*, and sometimes *Ignatia* or *Pulsatilla*.

Aconite often proves efficacious when the pains are most violent; when the patient lies unconscious; likewise with retching, crying and lamenting, and apprehensive of death; the least noise or motion is intolerable; the pulse very weak and small, stopping at intervals; particularly when the pain is throbbing, shooting, or like cramp over the nose, aggravated by the conversation of others; also in headache from cold, with catarrh, buzzing in the ears

and pains in the abdomen; with the disagreeable sensation as if a ball were rising up into the head, producing a sensation as of cool air.

Ignatia will relieve a pressing pain above the nose, which is mitigated by bending forward; pressing from within outward, twitching and throbbing; tearing in the forehead, as if a nail were driven through the head, piercing, boring deep into the brain; with nausea, darkness before the eyes, aversion to light, pale face, profuse colorless urine; the pains often cease for a time when the position is changed, and frequently returns after meals, at night after lying down, in the morning after getting up; the patient being very nervous, fickle-minded, taciturn and dejected. According to Goullon, if in delicate females the headache causes twitching.

Veratrum is frequently of use in nervous headache; when there is painful sensitiveness of the scalp: when accompanied by diarrhœa, and the pains are so severe that the patient almost loses his reason, becomes very weak and faint, is worse on getting up after lying down, with cold perspiration, chills and thirst. For other symptoms see *Veratrum* under "Headache from Constipation."

Pulsatilla will remove the tearing pains which grow worse in the evening, or are throbbing and tingling, after rising in the morning, and in the evening after lying down; with jerking, shooting, tearing in the temples, particularly when the pain is confined to one side of the head, and is accompanied by frequent giddiness, sickness of the stomach, heaviness of the head, dimness of sight, aversion to light; buzzing in the ears, or shooting, jerking and tearing; pale, distressed countenance, no appetite, no thirst; chilliness and agitation, with occasional bleeding of the nose, and palpitation of the heart; when all the symptoms are worse when at rest or sitting, and become better in the fresh air; when the headache is relieved by pressure or a tight bandage. It answers best with mild, good natured persons.

Bryonia is good for burning and oppressive pains in the head, or when, while stooping, it seems as if everything would fall out of the forehead; worse when walking; or more external tearing, extending to face and temples, or pressing, boring, tearing in small spots, especially in persons suffering from rheumatism, and of a petulant, passionate temper. *Rhus* will frequently be found of service after *Bryonia*.

Nux moschata, if the brain feels loose and wobbling when shaking the head; worse after every meal, particularly after breakfast; with sleepiness; if one cannot bear any pressure on the temples, not even lying on them; if the pain goes from right to left; if better from warmth; worse from cold, particularly from wet cold weather; and for sensitive, inconstant people.

Nux vomica, as before mentioned, is suitable for headache from constipation and from coffee drinking; also when the pain resembles the piercing of a nail, or stitching jerks, with nausea and sour vomiting; when there is a shooting and oppressive sensation on one side, beginning early in the morning, and growing worse and worse, until the patient seems to be unconscious or half crazy; when the brain feels as if rent asunder, and the face becomes pale and distorted, the head heavy, with a buzzing noise and giddiness or trembling when walking; worse when moving even the eyes, in the open air, early in the morning, after meals, or when stooping; also when the head is externally painful, and worse in cold weather.

Chamomilla relieves pains in the head which are caused by a cold, or by drinking coffee, when there is a rending or drawing pain on one side, extending to the jaw; acute, shooting pains in the temples, heaviness over the nose, or very troublesome throbbing; particularly when one cheek is red and the other pale, or the whole face turgid; when the eyes are painful, attended by a sore throat or cold on the lungs, or a bitter, offensive taste. It is useful for chil-

dren, and for persons unable to bear the least pain, and quite unmanageable.

Cinchona is most suitable for sensitive persons, and when the pain is oppressive, and prevents them from sleeping at night, or when there is tearing in the temples, as if the head were bursting; boring in the top of the head whilst the brain feels as if bruised; jerking, tearing, rolling and bursting; worse when stepping, at every motion, and on opening the eyes; relieved by lying down and being quiet; the skin is tender to the touch. For discontented persons; stubborn, disobedient children, who are fond of dainties, and have a pale complexion; face red and hot only at times, when they become very talkative, or are restless the whole night. It often suits after *Coffea*.

Antimonium crudum may be given for nervous headache resulting from a disordered stomach or a cold, or when an eruption has been driven in, and pains ensue; particularly when they are in the bones; for dull boring pains in the temples and forehead, also rending and tearing; the pains are relieved in the open air, aggravated on going up stairs. It answers well after *Pulsatilla*, when the disorder of the stomach is obstinate, or when the headache causes the hair to fall out.

Colocynthis is efficacious in the most excruciating headache, furiously tearing or when the pain is on one side, tearing, oppressive, squeezing, pressing in the forehead, aggravated by stooping and lying on the back; in attacks coming every afternoon or towards evening, on the left side, with great restlessness and agitation; particularly when the perspiration smells like urine, with small or offensive discharges of urine; while during the pain, the discharge of urine is considerable and very clear.

Capsicum, for throbbing headache, or that which is distending, bursting, pressing outwards, worse when walking or moving; tingling, tearing when at rest; when moving

the head or eyes and stooping aggravate it, also worse in the open air and in the cold; with phlegmatic sluggish persons, who easily take offence, or with children who are very refractory, clumsy and awkward; particularly such as are afraid of the air and of exercise, and are chilly, especially after drinking.

When the above medicines do not afford relief, try the following:—

Sulphur for throbbing, gurgitating, tearing pains, with heat, principally in the morning and evening; with nausea, worse in the open air, better within doors; tearing, with a stunning sensation and pressure; it returns weekly; loss of hair after suppressed cutaneous eruptions, ulcers, or perspiration.

Arsenicum for the same kind of pains, if worse within doors and better in the open air.

Silicea also, for beating, throbbing pains, with heat and determination of blood to the head; when caused by exertion, speaking or stooping, with nightly pains from the neck to the top of the head; for tearing pain every forenoon; when everything has a tendency towards the forehead and eyes; when swellings appear on the head, the hair falls out, the skin is very sensitive, the pain extending to the nose or face, with perspiration of the head.

Calcarea, according to Goullon, for children or young people who have vertigo, which is worse when stooping, and it becomes dark before the eyes; particularly if *Belladonna* has been insufficient.

Sepia for piercing, boring or throbbing headache, chiefly about the temples, or under one frontal protuberance, which pains at the slightest touch, compelling the patient to scream; nausea and vomiting, worse from the slightest motion, better when keeping very still; in the dark, with closed eyes, desire to sleep, which soon follows, and after sleeping for some time the headache ceases.

Violent headache, with great weakness, indifference and despondency often indicates the approach of a dangerous disease which may be prevented either by *Veratrum*, *Arsenicum*, *Phosphoric acid* or *Arnica*.

9. HEADACHE CAUSED BY SUPPRESSION OF RHEUMATISM, GOUT, ERUPTIONS, ETC. When rheumatism, gout, erysipelas, eruptions or ulcers have been suppressed, a dangerous headache sometimes follows, which ought not to be neglected. Give remedies recommended in these complaints; and examine, at the same time, what has been said in the preceding pages relative to medicines for headache.

If, in consequence of the suppression of the eruption in scarlet fever, erysipelas, measles, etc., pains in the head ensue, which very soon make the patient unconscious, or if these symptoms occur in fever attendant on a cold in the head, when the discharge from the nose has been suppressed, or from difficult dentition in children—there is no time to be lost.

For this condition give *Cuprum metallicum*. In any such case, however, procure a homœopathic practitioner, if possible.

Pain seated deeply in the sockets of the eyes and acute shooting pain through the brain, accompanied by weakness of the eyes, are symptoms of approaching blindness. If neither *Belladonna* nor *Sulphur* give relief, apply without delay to a homœopathic physician.

When a pain always re-appears in the same spot, deep in the brain, and there is on the other side of the body paralysis, crawling, jerking, or similar symptoms, it can scarcely be cured—but apply to a physician.

When aged persons have continual headache, and at the same time pass but little urine, which is thick, turbid and offensive, it forbodes no good. They must drink freely of water, rub the skin well with a wet towel, and apply to a physician.

For scald head, eruptions in the face, etc., see “Eruptions.”

FALLING OUT OF THE HAIR.

Loss of hair, which is immediately replaced by a new growth, requires no other remedy than frequent washing, brushing, and combing; but if it becomes thinner have it cut a little once a month. Washing the head frequently in cold water, particularly in the evening, and afterwards binding a handkerchief around the head, will be of service when the hair is getting thin. If the hair is too dry, oil, grease, ointment and pomatum are injurious; boil wheat bran, strain it, and wash the head once a week with the decoction.

A thin lye made from the ashes of beech wood, is efficacious in some instances where the hair is dry, or where there is dandruff either loose or adhering very closely. It may be used by dipping a fine tooth-comb or a sponge into it, cleansing the head afterwards with cold water. When the hair splits, it may be advisable to use a little grease or oil—bear’s grease is best—and to trim the ends every other day as long as the moon is increasing. When single bald spots appear it may at times be serviceable to shave them and part of the surrounding hair; if this does not succeed after a fortnight’s trial, rub the spot once a week with a sliced onion in the evening, or with the pomatum mentioned below. When persons become bald after severe illness, washing the head morning and evening with pure spring water is very serviceable. If the baldness is hereditary, all attempts at preserving the hair are often useless.

When baldness appears in early life, the following pomatum is very use-

ful: melt the marrow out of beef bones by the fire, put a single drop of tincture of cantharides into a saucer, stirring and beating up all the time; with this mixture rub the bald spots once every third or fourth evening.

If the hair falls out from debilitating causes, give *Cinchona*, and afterwards *Ferrum*. Also, for clammy sweat of the scalp, *Cinchona* is sometimes of service. If the hair falls out in consequence of profuse perspiration, *Mercurius* may be given. After the use of quinine or bark, give *Belladonna*; after mercury, *Hepar* or *Carbo vegetabilis*; after much grief and trouble, *Staphisagria* or *Phosphoric acid*.

After inflammatory diseases and nervous fevers, *Hepar*, *Silicea* or *Lycopodium*; in chronic headache of a hysterical or gouty kind, with great sensitiveness of the scalp, *Hepar* or *Lachesis*; in frequent headache arising from chronic disorders of the bowels, *Lycopodium*, which is also beneficial when the headache is attended with itching, and where there is much dandruff.

If all these remedies fail to prevent the loss of hair, take one drop of laurel oil, or oil of bitter almonds, and mix it gradually with two table-spoonfuls of beef's marrow, melted over the fire, or still better with oil of sweet almonds. Of this pomatum take very little on your fingers and pass them through the hair. Women are liable to lose their hair either from keeping it untied at night, or from tying it too tightly.

CHAPTER II.

DISEASES OF THE EYES.

GENERAL REMARKS.

ALL kinds of eye-water, salves and ointments injure the eyes; almost all of them contain more or less strong poison, and if they accidentally cure one disease, in most cases a new and worse complaint makes its appearance, sooner or later. Those who value their eyes ought to shun these poisonous and utterly useless things; remedies taken internally will generally effect a cure—particularly when the eyes have not been injured by quackery. The most common of these remedies, lead-water, as all experienced oculists know, produces white spots on the eyes, which it is almost impossible to remove.

Pure cold water, as an external remedy, is the only wholesome eye-water; it does good in many cases when the eyes are painful, red, and burning, when there is cough or cold in the head; also in chronic affections of the

eyes, with great aversion to light—growing worse on the slightest exposure—particularly to cold winds, or in cold wet weather. It may be used by washing the eyes frequently, or in acute inflammations by applying cloths which have been wet with it and changing them before they can get warm; the alternating cold and warmth which occurs when the applications are not renewed often, are worse than when no cold is used at all. In all cases when the patient cannot bear cold water, or when it proves useless, and when not merely burning, and a sensation as if there was sand in the eyes, accompanied by intolerance of light, are present; but when there are also violent pains and a discharge of acrid tears, lukewarm water will be preferable, applied either on a linen rag or by means of bread which has been soaked in it, renewing the application whenever the pain increases. When the eyes are very dry, and the eyelids close spasmodically, fresh olive oil is very useful. As a rule, it is injurious to use grease or salves of any kind as they become rancid and acrid.

When erysipelas affects the eyes, which may be known by the redness which spreads far around them, nothing wet should be applied, but instead, warm bags, filled with bran or cotton wool. If caused by poisoning by sumach nothing must be applied externally; give the remedies internally prescribed for the poisoning.

When a salve is insisted upon, take the white of a fresh egg, beat it with a teaspoonful of the finest loaf sugar and a little camphor to a froth, and put it on the eye, or else pure vaseline can be used. The most rapid cure, however, can be effected by the following remedies, dispensing with the salves.

INFLAMMATION AND SWELLING OF THE EYELIDS.

The *eyelids are sometimes red, inflamed and swelled*, when the eye-balls are not affected. For red, hard swelling, with burning heat and dryness, give *Aconite*; if the eyelids are pale, or yellowish-red, swelled, shining as if transparent, burning, with tension, and copious secretion from the eyes and nose, and there is much heat and restlessness, *Aconite* is also the first medicine: if not completely cured in a couple of days, give *Apis*, which is particularly suitable for every watery swelling, like erysipelas, around the eyes; eyelids swollen and sticking together; with a feeling of much matter in the eyes; much itching, and feeling as if chapped, burning and piercing pain, which is relieved by the application of cold water; in case the pressing pain remains, or the lids feel sore and as if bruised, *Hepar*.

When the swelling is great, and the lids are much inflamed and continue red and hot, there is violent burning, and mucus and pus exude, *Sulphur* is preferable to *Hepar*, particularly if the eyelids are contracted in the morning and the patient cannot endure the light.

If no immediate improvement takes place, repeat the *Aconite*, which will then have more effect. If *Hepar* has been given without producing any result, particularly when the eyelids burn and itch, and are swelled and red—when they stick together and bleed when opened—when the edges are everted or the lids feels heavy and as if paralysed, give *Belladonna*.

When the eyelids are inflamed inside, red and painful, burning violently, and the eyes can scarcely be opened, give *Arsenicum*, but if they seem to be forcibly closed, are swelled, difficult to open, and the pain is more cutting, with the edges ulcerated and scabs on the outside, give *Mercurius*; and should it not produce a favorable change, *Hepar*.

Graphites should be given when there exists together with the soreness of the lids a moist eruption on the face or behind the ears; the corners of the eyelids crack and bleed when they are opened; and edges of the lids are covered with scabs or scales, or are ulcerated.

Rhus is particularly efficacious in inflammation of the inner surface of the eyelids—which occurs in infants, and in older children—when the eyelids are closed as if by spasm, and when forced asunder, a thick, red swelling appears, and a secretion of mucus of a yellow color, or of pus, is discharged.

Euphrasia is beneficial in the ordinary cases of chronic inflammation of the eyelids, which itch in the daytime and stick together at night, are red and somewhat swelled, the edges ulcerated, exuding moisture or pus, with winking, dread of light, constant coryza, accompanied sometimes by a severe headache and by heat in the head.

Nux vomica when the edges of the lids burn and itch, feeling very sore when touched, and adhere towards morning. *Nux vomica* may be used with advantage after *Euphrasia*, and *Pulsatilla* after *Nux vomica*.

Mercurius should be given when the lids turn outwards, and there is pricking, burning and itching, or when there is no pain. It may be followed, if necessary, by *Hepar* or *Belladonna*.

If these remedies fail, and the lids are quite red, with some mucus in the corners of the eyes, the eyes sensitive to the light, and a pricking pain in them, give *Antimonium crud.* When the lids burn and smart, particularly when reading, and *Sulphur* affords partial relief, let *Calcarea* be taken; when there is a sense of crawling on the inside of the lids, increased in the evening with flow of tears, *Cinchona*. If the wings of the nose are harder than usual, give *Thuya*.

For biting, itching and stiffness in the lids, as if paralyzed, give *Rhus*; or for spasmodic contraction and closing, *Hyoscyamus*; when the upper lids feel as heavy as lead, give *Chamomilla*; if there is considerable dryness, also flow of tears, with difficulty in moving the lids and heat, give *Veratrum*. In all cases the edges of the eyelids should be carefully examined to see whether the itching does not proceed from small red maggots or flat brown lice, which in that case will also be found in the eyebrows. These must be picked off with delicate tweezers or a needle and the eyelid rubbed with sweet oil and alcohol.

If the formation of scabs on the edges of the lids is considerable, a small quantity of cosmoline may be rubbed very carefully each night along the line of the eyelashes, and care should be taken in the morning to wash the edges so well with warm water that all the scabs may be removed.

STYES ON THE EYELIDS.

Styes on the eyelids may generally be cured by *Pulsatilla*, and often disappear soon after taking it. If much in-

flamed and painful, *Hepar*, afterwards *Silicea*, and repeat this as soon as there is the slightest sign of its appearing again. Cold water is injurious; a warm poultice of bread and milk left on during the night is better. If they appear often, or leave hard lumps behind, or do not open, but become indurated, particularly when the eyes are apt to glue together, with biting and burning in the corners, where a dry secretion forms constantly, give *Staphisagria*; should induration remain, give, after a week or two, *Calcarea* or *Sepia*.

Thuja will also cure obstinate indurations in the eyelid, particularly if the corners are hot and dry, or there is a great flow of tears, when in the open air.

INFLAMMATION OF THE EYES.

In inflammation of the eyes, or sore eyes, when not only the lid but the eye itself is affected, or the latter alone.

Aconite is generally the best remedy, particularly when the complaint comes on suddenly, and increases rapidly—when the whole eyeball is red, or full of red vessels, weeps much, and is very painful; if the eyes feel dry or the pain is violent.

Apis, if there is jerking and twitching in the eye-balls, particularly in the left one, worse at night. Also for inflammation of the eyes, with a piercing and boring pain in the head that shoots towards the eyes; with great dread of light, or vanishing of sight and whirling before the eyes when they are at all strained; with pricking, boring, stitching pains in the weeping, red eyes; the lids, particularly the upper, are swollen and dropsical.

Nux vomica, when the corners of the lids are more red than the eyes, or the latter are bloodshot and smart as if there was salt in them—when they burn, with a feeling as if there were sand in them, and there is increased flow of tears—the patient cannot bear the daylight, particularly

in the morning; these symptoms are usually combined with fever, which is worse in the morning and evening.

Chamomilla, particularly for children, when there is pricking, pressing, burning in the eyes, as if heat were radiating from them; they are swelled and closed in the morning, or very dry, the patient being much irritated by the pain.

Belladonna, when the white of the eye is quite red, or large red blood-vessels can be seen; much heat, a discharge of sharp, burning tears, or when the eyes are quite dry and much affected by the light—when the pains are paroxysmal or deep-seated, accompanied by a catarrh so severe as to make the nose sore; pimples about the nose and mouth, face red, a short, dry, asthmatic and spasmodic cough, coming on in paroxysms which last for some time.

Argentum nitricum, especially indicated when the discharge from the eyes is thick like cream and quite profuse. Should this remedy not prove sufficient, *Pulsatilla* must be given afterward, or it may be given when the discharge is bland, whitish and quite profuse, with much lachrymation by day, and particularly if the patient is of the female sex.

Mercurius is useful when the flow of tears is profuse, burning and excoriating, and the matter discharged is thin and acrid, making the lids and cheeks red and sore. The pains in and about the eyes are worse at night, and the glare of a fire or of the lamplight is very distressing.

Sulphur is often called for: the patients are feverish and restless at night, and there are frequently sharp, darting pains like pins piercing the eye. It is well many times when the apparently indicated medicine does no good, to give a few doses of *Sulphur*, and then return to the former remedy.

Euphrasia, when there is a feeling of pressure in the eyes; increased secretion of mucus and acrid tears; when

the lids are contracted, and the eye is very red; accompanied with bad headache and bland catarrh in the evening. Also when there is more pain than redness, particularly a pressing pain, dread of all light.

Cepa if there is much flow of bland tears; redness, itching, pricking, burning, biting in the eyes; itching heat and swelling around the eyes, with acrid discharge from the nose, and headache.

If *Nux vomica* has not been given before, it is often indicated after other remedies, particularly if great sensitiveness remains.

When there is much discharge from the eyes, particularly with infants, they must be washed with tepid water very frequently, and unless all the discharge is in this way removed, a small syringe may be used to inject water gently between the partly opened lids. The precaution should always be most carefully observed, that patients suffering from sore eyes do not use the same towels that others employ, for frequently the disease is contagious.

EYES AFFECTED BY SCROFULA (SCROFULOUS OPHTHALMIA).

Many complaints of the eyes arise from scrofula, which may be distinguished by the symptoms enumerated under the medicines mentioned below; we meet with them in children who suffer from this complaint, or in grown persons who have suffered with scrofula in their childhood. When this disease has once weakened the eyes, they are liable to relapses from cold and other causes, and cloudiness of the eye and ulcers on the ball of the eye are much more frequent.

Pulsatilla often suits in the beginning, when the margins of the eyelids become red, burn, and a secretion of pus causes them to adhere; when there is a profuse flow of tears, which are so acrid as to make the cheeks sore, or a watery swelling appears; when the eyes cannot bear the light. If it gives relief, but does not effect a complete cure, give *Ferrum*.

Belladonna if there is a sensation of severe pressure in

the eyes, which is worse when they are turned upward; when many red vessels can be seen, and pustules and ulcers appear on the eye-ball (the cornea); when catarrh and other symptoms already mentioned under *Belladonna* accompany the disease, and it arises from a cold, or from damp wind or from wet cold weather.

Mercurius for children who have not yet taken any mercury; when the pains are cutting, particularly on straining the eyes, worse in the evening and in the warm bed; from heat or extreme cold; burning and biting in the open air, the eyes full of tears, light insufferable, particularly lamp-light or the glare of the fire; the cornea clouded; or small pustules or ulcers make their appearance on the cornea, and return with every fresh cold; it will often be of service after *Belladonna*.

Hepar may be given after *Belladonna* or *Mercurius*, or to children who have taken much calomel, when the eyelids and eyes are red and sore, and pain as if bruised on being touched, close spasmodically, can scarcely be opened; the light is insufferable in the evening; the eyes appear at times quite dull, at other times bright and clear; there is a feeling of pressure in the eye as if it would come out; and also when small pustules or spots appear on the cornea and little pimples externally around the eye. It is especially indicated when the eyes are always worse in dry cold weather, and feel better when covered up warmly.

Sulphur should be given instead of *Hepar*, when *Belladonna* or *Mercurius* have previously been given; but not after *Hepar*; in cases where the eyelids are almost closed in the morning, and the daylight is particularly painful to the patient, or he is quite blind during the day, and can only see a little during twilight; when there seems to be a mist before the eyes, the cornea is dim, appearing as if dusty; or when the eyelids are particularly affected, as noticed before. Also, when the white of the eye appears very red and there are little blisters on it; when there is

increased flow of tears and aversion to light, severe pressure in the eye-ball, aggravated in the light of the sun.

Euphrasia is called for when the flow of tears is great and acrid, and the discharge of pus and mucus from the eyes makes the eyelids sore and the cheeks to look as if varnished.

Graphites is a very important remedy; for its indications see symptoms under "Inflammation of the Eyelids."

Rhus tox. may be given where the cornea has little ulcers on it, with great fear of the light; the eye is very red, and the lids swollen and closed, and when they are forced open a gush of tears follows.

Calcarea is applicable when ulcers and films make their appearance on the cornea, accompanied by violent pressure, itching and pricking; or burning and cutting when reading in the evening; when there is a dimness and haziness before the eyes, particularly after eating, or when reading, sewing, etc.; also when there is a feeling of inward coldness in the eyes, or when the nose is swollen and scabby and the child picks it a great deal.

Arsenicum is sometimes of use when the pains are of a burning character, as if produced by red-hot coals, and when spots have already made their appearance on the eye. In affections of this kind the medicines before recommended in "Inflammation of the Eyes" are suitable remedies.

Very severe diseases of the eyes are caused by the suppression of cutaneous eruptions, ulcers, or other diseases; in such cases apply to a homœopathic practitioner. If they are consequent upon small-pox, measles, scarlet fever, see what is said under these different heads.

For sore eyes of new-born children, see "Diseases of Children."

Spots or films on the eyes should never be treated with corrosive remedies. Rather give the eye rest, and if you cannot consult a physician, carefully select from among the medicines mentioned above; especially useful are *Euphrasia*, *Apis* and *Pulsatilla*; *Belladonna* may be given, afterward *Hepar* or *Sulphur*, and then *Calcarea*, *Lycopodium* and *Silicea*.

He who is not patient enough to try these remedies may use genuine pure nut oil, obtained by pressure and moderate heat from walnuts that are

not a year old; introduce one drop of it into the eye every evening. To white spots which are very thick, apply finely powdered table salt, with a hair-pencil. For the whitish or gray spots on the cornea, due to ulcers—for serious opacities of the cornea interfering very much with vision, a homœopathic practitioner should be consulted.

DEFECTS OF VISION, WITH REMARKS ON THE SELECTION AND USE OF SPECTACLES.

The most frequent defects of vision are near-sightedness (*myopia*), old-sightedness (*presbyopia*) and long-sightedness (*hypermetropia*).

Near-sightedness depends on a malformation of the eye, in which the eyeball is too long from before backward. This condition is sometimes inherited, but as a rule is due to using the eyes a great deal at close work, in an improper position and with poor light. Careful examinations of the eyes of a very large number of school children, from the primary schools on through the higher schools, and of young men in college, have shown that *myopia* existed in a large percentage of the cases, and always in an increasing degree as the higher grades of schools were reached, until, finally, of the students of a university, about two-thirds were found near-sighted. This condition of the eyes is remedied by concave glasses, and when proper glasses are worn the near-sightedness is prevented, in a large measure, from increasing, and consequently myopic children cannot put on glasses at too early an age.

In selecting glasses for near-sightedness or for any other defect of vision, it must not be thought sufficient to go to an optician or to buy a pair of glasses of some peddler that improve vision more or less. This practice cannot be too severely condemned. Many persons suffer from ruined or much injured eyes by so doing. A competent oculist should always be consulted. He, with his test glasses, will find out exactly the glasses needed and write a prescription for them; then you can get from the optician the glasses which are ordered.

Old-sightedness is constant, to a greater or lesser extent, in all people as they advance toward middle life, and it increases, to a marked degree, as age increases. This defect is due to the change in the crystalline lens of the eye, which has its origin in causes due to the period of life. One finds ordinarily that at 40 or 45 years of age the newspaper is read in the evening with less ease than formerly, the print must be held further off than before, and books printed with fine type have to be discarded entirely.

Most persons dislike to acknowledge that their sight is affected by advancing years, and so many put off wearing glasses at the cost of their personal comfort; but whenever the eyes begin to show signs of *presbyopia*, glasses should be procured at once. In this case, too, an oculist should be visited, so that the proper strength of glass may be procured.

A *long or over-sighted eye* is one that is too short from before backward, and when this state exists it is a defect with which the person has been born. Still, it is often not noticed until mature growth is attained, because the accommodative or adjustive power within the eye is so strong in early life that a considerable degree of hypermetropia can be overcome by this means; but sooner or later this adjustive power will fail to longer compensate for the malformation, and then symptoms of what is commonly called *weak sight* will appear. Usually distant objects will be seen with wonted clearness, but when reading, writing, sewing, or any work demanding constant tension of the eyes, has been persisted in for a length of time, the letters begin to run together or objects to blur, the eyes pain and water, headache frequently occurs, and these symptoms become so painful, and vision so signally fails, that whatever work one is at must be desisted from. After resting the eyes for some time work may be resumed, but pretty soon the accommodative apparatus tires and the same symptoms reappear. Nothing will relieve the morbid conditions depending on this cause except convex glasses of the proper strength. Eyes often become crossed in this form of defect, and at a stage when the squint is not constant, the deformity can usually be cured by glasses.

Sometimes the symptoms of weak sight are not due to hypermetropia, but to a weakness of the muscle, which turns the eye toward the nose. In this latter case prismatic glasses may be required.

There is another defect of vision which is not very uncommon, and which consists in a variation in the curvature of the cornea in its different meridians. A person having such eyes will, perhaps, see vertical lines with more distinctness than horizontal ones, or the opposite. Such eyes must have a peculiar kind of glass, which no one but a skilled oculist can prescribe. At the risk of wearying the reader, we wish to repeat again the caution: do not select a pair of glasses for yourself, nor allow anyone else to who is not a competent oculist. Spectacle dealers do not understand selecting glasses, and they do much harm in attempting to select them.

To protect the eyes from the glare of the light when walking in the bright sunshine, over snow-covered regions, or when working near the fire, spectacles made of a light blue glass, colored by cobalt, should be worn; the color ought to be of such a shade that bright sunlight, when falling through the glass, appears snow-white, without blinding the eyes. Glasses of the color commonly known by the name of "*London smoke*," are injurious, they ought not to be used; the same may be said of green glasses.

Spectacles ought to have as light frames as possible; and for children, and those who wear them constantly, should have the ends of the side pieces bent downward in such a manner as to partly encircle the ears. The larger the glasses are, the better; they should be perfectly clear and transparent, without a red or green shade, and free from flaws; they should be well and uniformly ground; they should always fit the eyes so accurately that the centre of each glass may be opposite the pupil of the eye. When one must use

glasses constantly, it is better to wear spectacles than eye-glasses. These latter are not apt to keep their position well, and ought to be used alone by those who only now and then need the aid of glasses.

The glasses should always be kept clear and bright, should never be touched with the bare finger, but frequently wiped with soft buckskin. When the glasses get scratched, they should be replaced by new ones.

It may be well to say, in a general way, in regard to the care of the eyes, that one should always endeavor to have a good light in reading, writing, engraving, or at any sort of close work, and that the light should come from the side or else from over the shoulder. The eyes ought, at intervals of half an hour or less, be rested for a few minutes. No one should read while riding in the cars, unless the motion is extremely steady, for the constant movement of the book or paper requires incessant changes in the accommodation of the eyes, as the printed page approaches or recedes from the eyes, and soon they become wearied and injury is apt to result. It is unwise to read while lying, and especially when ill, for the eyes are at such a time weaker than usual and can easily be strained.

ATTACKS OF BLINDNESS.

Aconite will sometimes benefit sudden, temporary attacks of blindness; *Mercurius*, attacks which return frequently, but if the patient has taken much calomel, *Silicea* should be given instead.

Belladonna is efficacious in night blindness, when the patient can see nothing after twilight, particularly if something red or fiery appears before the eyes, or a colored circle around the candle.

Lycopodium has cured many cases of night blindness, particularly when there were at the same time black spots floating before the eyes.

Veratrum is also indicated when black spots or sparks appear before the eyes; if this is not efficacious, give *Hyoscyamus*.

Sulphur, followed by *Silicea* or *Phosphorus* if necessary, is serviceable in attacks of day blindness, where the patient can only see well in the evening.

DREAD OF LIGHT.

The shrinking from the light is usually connected with other complaints, for which the appropriate remedy must be selected. If this is not the case, however, give *Aconite* and wait a few days; then give *Nux vomica*; if no better after three days, *Belladonna*; after eight days, *Mercurius*; and after eight days again, *Hepar*, sometimes *Calcarea*. When the patient has so great a desire for light, that he cannot have it intense enough, give first *Aconite*; afterwards, if necessary, *Belladonna* and afterward *Sulphur*.

For dread of light with headache, *Euphrasia* may be given when the light of a candle appears dark and unsteady;

Apis if everything seems to whirl before the eyes, and if the eyes feel as if full of mucus;

Pulsatilla when a fiery halo or circle appears around the light, or the sight is dim, as if something needed to be wiped away, when everything appears double or is totally obscured;

Belladonna when a variegated halo surrounds the light of the candle, when the patient sees red spots or a mist; if the objects appear double and there is incipient blindness;

Staphisagria for dimness of sight, with black flashes and flickering, during the day; in the night fiery, meteor-like appearances, or a halo around the light.

SQUINTING OF CHILDREN.

Squinting of children, if there is great heat in the head, is often cured by *Belladonna*; when occasioned by worms, by *Hyoscyamus* or *Cina*; after scarlet fever, *Rhus* or *Cuprum*; if it arises, which is very common, from the light always being kept on the same side of the bed of the child, place it for some time on the other side, or turn the child in the bed, so as to have the light on the other side; afterwards place the child in such a manner as to have the light in front, which is the proper position. If this cannot be done, put a

dark screen before the light. With older children this is seldom of much use. In these cases you may tie up the sound eye first every day for several hours, afterwards for several days at a time, so that they cannot see with it at all, and may thus learn to accustom themselves to use the squinting eye properly.

If, in squinting, both eyes are turned outwards, put a bit of black court plaster on the tip of the nose; if inwards, put a screen of shining silk on each side of the head, like blinkers. If all this proves unavailing, consult a physician.

CHAPTER III.

AFFECTIONS OF THE EARS.

ERUPTIONS.

Eruptions behind or in the ears. See "Eruptions."

MUMPS.

Mumps, a swelling of the great salivary (parotid) gland lying under and in front of the ear, frequently occur with children, but are not dangerous unless the disease disappears from the neck and attacks some other structure. Sometimes the swelling extends over the whole neck, so that the patient can scarcely chew or swallow, and increases for three or four days. Occasionally on the fifth or seventh day the swelling of the neck disappears, and shows itself in the breasts or testicles, which become red and painful, and pain in the bowels or other symptoms make their appearance.

The patient should be kept warm, not too much so, however, and care taken to prevent his taking cold in any way. All stimulating food and drinks should be avoided, and no external application made use of, with the exception of tying a cotton or linen handkerchief around the neck, but not silk or woolen ones.

Mercurius is the principal remedy in this affection.

Belladonna will, however, be indicated if the disease assumes an inflammatory character, or the swelling is very

red, resembling erysipelas, or very painful, and when it strikes in and affects the brain, which may be known by the swelling suddenly disappearing and unconsciousness and delirium following. If it affects the testicles give *Pulsatilla*, and after several days, *Mercurius* or *Sulphur*.

Bryonia is sometimes useful when the swelling suddenly disappears and alarming brain symptoms occur.

Rhus tox when the swelling is dark red and the left side is affected.

Carbo vegetabilis when the patient has a slow fever, the swelling becomes harder and will not go away; or when striking in, it affects the stomach; and also when *Mercurius*, given in the commencement of the disease, has failed in giving relief, or if the patient has previously taken much calomel. Should *Carbo vegetabilis* be insufficient, it may be followed by *Cocculus*.

Hyoscyamus may be given for the symptoms indicated under *Belladonna*, if the latter fails to produce a favorable change in thirty-six hours.

When attended by pain in the throat, see under "Affections of the Throat;" when by much hoarseness, *Carbo vegetabilis* almost always proves efficacious.

If the complaint occurs in combination with affections of the ears or teeth, in scald head, scarlet fever, measles, small-pox, malignant fevers, or after excessive use of mercury, see the remedies for these diseases.

INFLAMMATION OF THE EAR.

In inflammation of the ear there is generally redness, heat, pain, and swelling. The external passage or tube is sometimes nearly closed, and the pain is very severe; the patient can scarcely bear to have the ear touched. The trouble is frequently caused by little boils in the canal of the ear, sometimes a slender piece of pork or fat ham put into the ear will give relief. Warm applications are of great benefit.

Pulsatilla is indicated when the complaint is accompanied by so violent a tearing, boring, throbbing, pricking, and burning, that the patient becomes delirious.

Belladonna will be required if the inflammation penetrates to the brain, with great agitation, vomiting, coldness of the extremities and other dangerous symptoms.

In case boils are the cause of the inflammation, *Arnica* or *Hepar* will be useful.

EARACHE.

Cepa should be given if the pain is worse at night and in-doors, more on the left side, if the pain goes from the throat or head to the ear and if it is accompanied or has been preceded by catarrh.

Chamomilla for single, acute, stabbing pains in the ears, as if made by a knife; the ear being dry and without wax; or tearing pain in the ears, extending to the ear lobes; the patient is very cross and easily offended; the pains intolerable.

Mercurius, if the patient sweats without any relief; when there is a tearing pain extending to the cheeks, pricking deeply, at the same time tearing, pressing, burning pain; or when it burns externally, or feels cold inwardly, with violent twitches and pinching; particularly when the ear is discharging a little. For children this is the principal remedy, after which *Sulphur* may be given.

Pulsatilla, if during the course of a rheumatic attack, earache occurs and is attended by jerking, tearing pains, as if something would be pressed out; or when the ear is externally red, hot and swelled, the pain going through the whole side of the face, particularly in persons inclined to chilliness and easily moved to tears.

Nux vomica, for tearing, piercing earache, occurring in passionate, irascible persons.

Arnica, for very sensitive persons, who have a return of the pain on the slightest exposure, with pressure and stitches in and behind the ears, also tearing, heat, and irritability at any loud noise.

Cinchona, if the pain is more in the external ear, with redness, pricking and tingling inside.

Belladonna, for earache, with stitches in and behind the ears; boring, screwing, throbbing pain, with tearing and stitching down into the throat, with ringing, roaring and rushing, particularly when the head and eyes are affected; the pains during the paroxysms being worse when the parts are touched, or on moving about.

Hepar, for the same symptoms as *Belladonna*, when the latter is insufficient, and also for a shooting pain on blowing the nose, with throbbing and roaring in the ears.

Calcareæ, if the pains are chiefly confined to one side; throbbing deep in the ear, and so violent as almost to drive the sufferer to distraction; especially if mostly on the right side, or worse after midnight, towards morning or in the forenoon.

Sulphur, if the pain returns frequently; is on the left side, or is aggravated in the evening or before midnight.

Platina, if the pains are very severe, like cramps, with a jerking, rumbling and rolling sensation in the ears; they feel cold, and numb with a crawling sensation, extending to the face.

Dulcamara, for similar cases and particularly after taking cold, when the pains are worse while the patient is at rest; particularly during the night, and which are attended with nausea.

Rhus is very useful if the earache is caused by getting wet or by suppressed perspiration.

Other remedies, such as *Phosphoric acid*, *Antimonium crudum*, etc., may be required in some cases.

Make no external application; even oil may become injurious; hot vapors may burn the ear, and a part that is once injured cannot be restored. A sponge dipped in warm water and tied upon the ear can be used and will sometimes mitigate the pain without doing any harm, but a better way is to lay the patient on the well side and having a little pitcher of water as warm as can be borne, pour a continuous stream into the suffering ear; the constant flow of warm water into and out of the ear canal will frequently relieve the severe pain in a few moments.

RUNNING OF THE EARS.

Running of the ears is a complaint which always needs the most careful attention, for usually a chronic ear discharge has its origin in the inner ear, which has only a thin plate of bone separating it from the brain, and inflammation of the brain or abscesses in the brain are not infrequent occurrences, depending entirely on a neglected ear discharge and so, though the complaint is a tedious one, it should be treated until it is cured. This can usually be done when a case is taken early. It is necessary to use the most careful cleanliness and the ear should be gently syringed out several times daily with warm water, and then a little fine wool put into the ear to protect it from the cold air, to hinder insects from crawling into it, and to prevent the discharge flowing out on to the cheek; when the syringe is used the ear should be pulled up and backward to straighten the canal and the nozzle of the small syringe inserted a short distance into the canal. In this disease oil should not be dropped into the ear.

When a discharge from the ear remains after inflammation, or is accompanied by pain, particularly by pain pressing outward; or the ear is hot and red, or covered with a scabby, itching eruption; or when the disease succeeds measles, give *Pulsatilla*; if that does not relieve, *Sulphur*.

For the discharge following scarlet fever, give *Belladonna*; and after a few days, if necessary, *Mercurius*, and then *Belladonna* again; if this is not sufficient, *Ipecar*.

In the discharge from the ears occurring after small pox, which is sometimes bloody, and combined with pricking pain; if the ear is outwardly ulcerated, and the discharge offensive, give *Mercurius*. But if the patient has taken much calomel, give *Ipecar*; if he has taken too much sulphur, give *Pulsatilla*, and, a few days afterwards, *Mercurius*.

Should it, notwithstanding, become very tedious, take as much potash as will lie on the end of a knife, dissolve it in a pint of rainwater, shake it well, then pour a tea-spoonful into the ear every day after it has been syringed, until it begins to improve.

If the discharge is purulent and long-lasting, give *Mercurius*, and eight days later, *Sulphur*. Should it not im-

prove under this treatment, give *Calcarea*. If there is a severe headache accompanying it, give *Mercurius* or *Sulphur*; if this gives no relief, *Belladonna*, and afterwards *Lachesis*. Should no benefit accrue, notwithstanding all this, give, two mornings successively, *Silicea*, and repeat it after one or two weeks, if necessary. A chronic discharge is sometimes relieved by *Causticum*, particularly when the patient is frequently attacked with rheumatism. But if all these remedies fail, try injections of a solution of borax, in the same proportion as the potash mentioned above.

When the glands of the neck become hard and swollen after the suppression of the discharge, give *Pulsatilla*; later, *Mercurius* or *Belladonna*.

If severe headache and fever occur, give *Belladonna* first; if no relief is obtained, *Bryonia*. If it is produced by a violent cold or wet feet, and the patient is better from exercise, give *Dulcamara*; but if better by keeping quiet, give *Belladonna*. If worse when warm in bed, *Mercurius*.

If after a suppressed discharge, a swelling like mumps takes place, give the remedies prescribed for mumps.

Sometimes a violent headache arises, which becomes dull, with a pressure, as if the skull were too small; the eyes become red; the pain is worse when moving, and is followed by fever; sometimes spasms in the face occur, swelling of the head, loss of memory, etc.; followed by a roaring and rushing in the ears, deafness, and a sudden discharge of matter. Let the ear be cleansed with lukewarm water, and the patient lie on the side affected, having a small cushion or folded napkin placed about the ear. If the malady is perceived before the purulent discharge appears, give *Hepar*; if not better in a few days, *Mercurius*. If this produces no marked result after several doses, give *Lachesis*; after this again, if necessary in a day or two, *Hepar*.

The same treatment is to be observed when the discharge ceases suddenly. Usually as soon as there is an escape of pus, the patient is safe, and nothing more is necessary to be done, except to keep the ears carefully cleansed with injections of lukewarm water, as already recommended in this chapter, until the discharge has ceased.

BUZZING IN THE EARS.

This complaint is generally connected with running of the ears and difficulty of hearing; or with earache. Sometimes with headache and determination of blood to the head. In such cases the appropriate medicines for these diseases should be given.

If, however, it is unconnected with other symptoms, and arises from cold, is worse in the morning, *Nux vomica* is the proper remedy.

Pulsatilla, if worse in the evening.

Dulcamara, if worse in the night; for persons who perspire much, *Mercurius*; for those who cannot sweat, *Chamomilla*; to very sensitive persons who have taken much mercury, or suffer much from fever, or liver complaints, when the buzzing is more hissing, like a ringing or singing, give *Cinchona*; but if louder, more like the noise of a humming-top, or where *Cinchona* does no good, *Carbo vegetabilis*. In old persons, especially if it is on one side, with great determination of blood to the head, which seems to cause the buzzing, *Arnica* is beneficial, and must be repeated whenever it becomes worse. If it returns always with or becomes worse from wet weather, if it is worse in doors, particularly after lying down, if it causes hardness of hearing, if it is accompanied by pain in the throat, running of tears, or trouble when making water, give *Cepa*. If it has been of long continuance, apply to a physician.

Sometimes, when the least noise cannot be borne, *Sulphur*, and afterwards *Aconite* will do good. If this fails, give *Carbo vegetabilis* and *Coffea* several times afterwards.

If attended with great sensitiveness when exposed to

the wind, or with echoing of every step and word, in persons who suffer frequently from tearing pains in the limbs, give *Causticum*.

HARDNESS OF HEARING.

This complaint is sometimes connected with other diseases, and will then only cease when they are removed. When it is of long standing it cannot easily be cured; but that which is of a recent date is, as a rule, more easily removed.

Occasionally in children, and not infrequently in grown persons, it is caused by some obstruction in the ear. The ear should be examined carefully, by placing the patient in such a position that the light may fall into the ear; if an ear-speculum is at hand it will enable us to see down to the bottom of the ear passage. In case there is an accumulation of hard dark brown wax in the ear, which can easily be detected, this must be removed by the syringe. Warm water alone should be used for injecting. It is dangerous to introduce hair-pins or ear-picks into the ear, as these can never extract the hardened wax, and they often push it still further into the passage, even as far as the drum of the ear, causing exquisite pain, and inflammation if it be not immediately removed. Caution is required in the use of the syringe, not to introduce the nozzle too far, nor to inject too violently. Whilst using it the outer ear should be drawn upwards and backwards in order to straighten the canal. These injections of luke warm water should be used every morning and evening; the water should be retained in the ear for a while to soften the wax. Glycerine may be dropped into the ear a few times to assist in softening the wax, but the use of the syringe must still be continued.

The most frequent cause of hardness of hearing is a catarrhal condition of the throat and of the tubes leading from the throat to the ear. In such cases relief is sometimes gained by holding the nose and mouth both tightly closed and then trying to blow the nose. This method may succeed in forcing air through the closed tubes into the middle ear and will greatly aid the recovery of the hearing.

If too great a dryness of the canal of the ear or want of wax is the cause of the deafness, sometimes *Carbo vegetabilis* or *Lachesis* prove useful. The passage may be moistened by means of glycerine, which should be introduced into the ear at night on a little cotton wool. Before using it taste it, if it is sweet it is good, but if at all sour it will injure the ear; unless you can bear it in your eyes it is

impure; but to test it further put a drop on a small piece of glass, add a drop of salt water, if this makes it cloudy do not use it. But the glycerine is after all only like a crutch for a lame person, a good physician should always if possible be consulted.

Hardness of hearing, attended with singing, tingling, and twittering, is sometimes speedily cured by *Veratrum*.

If connected with running from the ear, give medicines prescribed for this complaint, especially *Pulsatilla*, *Mercurius*, *Sulphur*, *Calcareo* and *Causticum*.

If it is in consequence of measles, *Pulsatilla* or *Carbo vegetabilis*; after scarlet fever, *Belladonna* or *Hepar*; after small-pox, *Mercurius* or *Sulphur*.

If connected with cold in the head, and its general attendant, a sore throat, which is relieved by swallowing, gargling with warm water is advisable, and give *Chamomilla*, *Arsenicum*, *Mercurius*, or *Lachesis*, according to the symptoms under "Catarrh."

If it arises from rheumatism, which has been suppressed by a cold, and has affected the ear, give the medicines proper for the rheumatic pains, and afterwards *Bryonia*, *Dulcamara* or *Sulphur*.

If caused by suppressed eruptions or ulcers which have been healed by salves, etc., give the remedies for these, particularly *Sulphur* or *Antimonium crudum*.

If the patient has been affected with piles, sometimes *Nux vomica* gives relief; if with nervous fever, *Arnica* or *Phosphoric acid*.

If the tonsils are swelled and cause hardness of hearing, *Mercurius vivus* and *Staphisagria* frequently prove useful.

In chronic complaints of this nature, dieting and drinking plenty of cold water are of great importance. If not removed by the means recommended above, consult a homœopathic physician.

Besides the above mentioned remedies you may, after comparing the remaining symptoms, take your choice among the following: *Veratrum*, *Staphisagria*, *Arsenicum*, *Hyoscyamus*, and in very tedious cases *Silicea* or *Calcareo*.

Beware of remedies which, in their application, must be introduced into the ear. Let nothing be introduced into the ear except such remedies as have been recommended here. Affections of the ear are generally very tedious and difficult to cure, and sometimes quite incurable.

CHAPTER IV.

AFFECTIONS OF THE NOSE.

PAINS AND ERUPTIONS.

For pain and eruptions, see "Toothache," and "Eruptions."

SWELLING OF THE NOSE.

Arnica, when the nose is swelled in consequence of having received a blow, or when the swelling occurs very suddenly without any apparent cause, accompanied by crawling and pain in the upper part of the bone, as if after a blow.

Belladonna, when the swelling is attended with catarrh, when the edges of the nostrils are swollen and sore, with redness, heat and pains, sometimes extending inwards, with burning, prickling and dryness; the smell sometimes very sensitive, sometimes not enough so; and, where this remedy does not suffice, *Hepar*.

Mercurius in watery discharge from the nose, making it sore, and when the nose is red, having a shiny, swollen appearance, with itching, pains in the bones upon pressure. In these symptoms it is better to begin with this remedy, and to give *Hepar* afterwards, or perhaps *Belladonna*.

Hepar, in swellings occurring in persons who have taken much calomel; and afterwards *Mercurius*.

Bryonia, is sometimes of service in long lasting painful swelling.

Sulphur, in swelling, with black specks on the nose.

Phosphoric Acid, red spots on the nose.

Causticum, warts on the nose.

Rhus, when the point of the nose is red.

Cantharides, red, shining swelling with tension in the forepart of the nose.

Arsenicum, chronic redness.

BLEEDING OF THE NOSE.

Bleeding of the nose occurs in the course of many diseases, and frequently benefits the patient considerably. It ought not to be interrupted, unless it is too violent or lasts too long. Cold water, vinegar, sponges, corks, brandy, creosote, etc., applied inconsiderately, may have an injurious effect. Filling up the nose is always useless; it is better merely to compress it, and to see whether the bleeding stops, or whether the blood flows into the throat.

The bleeding may sometimes be stopped by extending the arm which is on the same side as the bleeding nostril, perpendicularly upwards over the head, though when the arm is taken down again the bleeding is liable to return.

Arnica is the best remedy for bleeding of the nose occasioned by a blow, fall, or any external injury, and also when it is preceded by crawling in the nose or forehead; when the nose feels hot, and the blood is of a bright red color. It is especially suitable for men.

Pulsatilla, for women, especially those of a mild, quiet disposition, or who have too scant a flow at the menstrual periods, and also if the bleeding takes place during a catarrh, with alternate running and stoppage of the nostrils, and when the bleeding recurs in the afternoon, evening, or before midnight.

Aconite, for violent bleeding, brought on by being very much overheated, or the patient has the appearance of being overheated; or that caused by determination of blood to the head, or by drinking wine; it is particularly

applicable to persons of a plethoric habit. If it does not soon relieve, *Bryonia*, when there are complaints of the head and chest accompanying the bleeding.

Cinchona in enervated and debilitated subjects who have frequent and long continued attacks of hemorrhage, with great paleness of the face, twitching of the extremities and coldness, convulsions, etc.

Carbo vegetabilis: nose bleeds frequently and from slight causes; worse at night and in the forenoon; face pale before and after each attack; while this remedy is one of the most important ones in this complaint, it is most useful in old or debilitated persons.

Rhus, if the nasal hemorrhage was brought on by great exertion, overlifting, straining, etc., and is worse every time the patient stoops, or if it comes at night wakening one from sleep.

Crocus for bleeding from the nose, when the blood is very dark, almost black, of a thick viscid character, and when the hemorrhage is accompanied by cold sweat on the forehead.

Mercurius, when bleeding takes place at night during sleep and the blood coagulates immediately in the nostrils in cone-shaped clots, or the bleeding is accompanied with fever in the night.

Cina in children who are subject to worms, or when the bleeding is brought on by picking and boring at the nose.

Sulphur will frequently be found beneficial to persons who are subject to repeated attacks of nasal hemorrhage.

Secale, when the bleeding is caused by great physical debility.

If the above remedies fail in stopping the hemorrhage after a sufficient time has been allowed them to act, benefit may be derived, especially in bleeding consequent upon overheating or drinking wine, from immersing the hands in warm water, and afterwards keeping quiet. A large key or other instrument of iron applied cold to the spine will often stop hemorrhage from the nose.

Where the bleeding proves obstinate and the patient is in danger of suffering seriously from the excessive loss of blood, a physician must be summoned, and he can check the flow by plugging the nose posteriorly through the mouth and anteriorly through the nostrils.

OZÆNA.

An extremely obstinate ulceration of the lining membrane of the nostrils, attended with fetid discharge, and sometimes followed by destruction of the cartilages, and by decay of the bones of the nose, is termed *ozæna*. Its origin is probably in many instances connected with syphilis. In other cases, however, there are marks of a purely scrofulous taint.

One of the most troublesome attendants of the disease is the accumulation of thick mucus or incrustations which sometimes entirely block up the passages of the nose. When a catarrh has progressed to such a stage a physician should be consulted.

CATARRH OR COLD IN THE HEAD.

Camphora tincture, in drop doses every half hour for a few hours, if taken when the very earliest symptoms of a cold in the head appear, will often prevent the further development of the cold.

Mercurius is the principal remedy in epidemic catarrh, (influenza or grippe,) when many persons are affected with it at one time; especially if there is constant sneezing; the nose somewhat swollen and sore, with constant watery discharge; offensive smell; pain in the head and cheek; profuse sweat at night; the catarrh worse in the morning, and also when accompanied by fever; the patient does not like to be alone, and has much thirst, feels the heat uncomfortably, yet cannot bear the cold. If the symptoms have been better and become worse again, give *Hepar*. It is especially serviceable for children, and in catarrhs caused by suppressed perspiration, with fever and pains in the different parts of the limbs.

Hepar may be given instead of *Mercurius* to persons who have previously taken much calomel, and also when

the catarrh or headache is renewed by every breath of air, or when only one nostril is affected, and the headache is increased by every movement. If *Hepar* does not prove effective, give *Belladonna*.

Cepa for the ordinary catarrh, which attacks many people at the same time, and is aggravated by wet, windy weather; it commences generally on the left side and goes to the right; with much sneezing, profuse acrid discharge from the nose, which is inflamed and sore down to the upper lip; with running of the eyes, headache, cough, thirst, heat, pain in the teeth or all over, worse at night and in a room, better in the open air and in the cold, but always worse again when returning to the warm room.

Lachesis will be found useful in catarrhs of the severest kinds, with profuse watery discharge from the nose, accompanied with great soreness and swelling.

In another kind of catarrh when the patient has not so much redness, heat and thirst, but has a desire for warmth; drinks often, but little at a time; is unusually weak, restless, agitated; complains of burning like fire without much heat or redness being perceptible; the discharge is not offensive, but more acrid and corrosive; the soreness of the nostrils is very great and very uncomfortable; motion and warmth relieve, and every little cold does not aggravate; in this case give *Arsenicum*, *Dulcamara*, *Nux vomica*, sometimes also *Ipecacuanha*:

Arsenicum, when the nose feels stopped up and yet runs, the discharge is acrid; soreness of the nose inside and out from the discharge; the patient is sleepless at night without any particular cause, or the nose bleeds at night; cannot lie still.

Nux vomica, for the same symptoms as *Arsenicum*, when the latter causes no improvement in twelve hours, or when the catarrh is fluent during the day, and dry at night; the mouth dry and parched without much

thirst; tightness of the chest and constipation. This remedy is also particularly useful in alternate heat and chilliness, especially in the evening, and also when there is great heat of the head and face, or all over.

Dulcamara, where the symptoms are partly for *Arsenicum*, and partly for *Nux vomica*, but the patient feels better when in motion and worse when at rest, and the slightest exposure renews the obstruction.

Ipecacuanha, when *Arsenicum* or *Nux vomica* appears to be indicated, but prove insufficient.

Pulsatilla may be indicated when there is not so much soreness of the nose, but the patient is at once deprived of appetite and smell; the mucus discharged is thick and yellowish, or sometimes green and offensive.

Euphrasia is serviceable in catarrhs accompanied by a thin discharge from the nose, and scalding tears from the eyes.

Rhus, when the mucus is thick and yellowish with heat rash or scurf on the nose.

Chamomilla frequently cures acrid catarrh with ulcerated nose and chapped lips, one cheek being pale and the other red, with chills and thirst; this condition existing particularly in children, and when it was brought on by suppressed perspiration.

For catarrh, which lasts long or returns again and again, the nose either running or stopped up, give *Silicea*; afterwards *Calcaria*, particularly to teething children.

When the catarrh has been suppressed, and headache is the result, give *Aconite*, and if the discharge does not return soon, *Pulsatilla* or *Cinchona*. If the pains are excessively violent, particularly over the left eye, then give *Spigelia*; if in the whole forehead or worse on the right side and more throbbing, the mucus being very yellow and like pus, *Belladonna*. If the pain always returns for a few hours in the evening, give *Arsenicum*; should the chest be affected and difficulty of breathing occur, *Ipe-*

caecuanha, and if the patient does not improve, *Bryonia*, or *Arsenicum*. See "Asthma." Let the patient drink hot water, with milk and sugar, and let the vapor of hot water be inhaled through the nostrils. If none of these medicines afford relief, give *Sulphur*.

If the catarrh is connected with other complaints, particularly with those mentioned in the subsequent chapters—such as affections of the chest, hoarseness or cough, look under these respective heads for the necessary remedies.

Never suppress a catarrh either by cold or by drugs; it is always a purifying process. Nobody takes cold who has no impurities in his system. One is much more liable to catch cold after eating or drinking acrid or indigestible things. Many children will not get rid of a cold as long as they indulge in too much sugar, syrup and other sweets. There are whole families, each member of which will have a cold in the head for three days every time they eat roasted goose, others after other food. As dust in the nose makes people sneeze, so impurity in the blood inclines them to catarrh.

CHAPTER V.

AFFECTIONS OF THE CHEST.

HOARSENESS.

Among the common domestic remedies for hoarseness, there are many which are decidedly injurious; and others, which, if they do good, always leave after them a disposition to relapse. Hoarseness, when it returns frequently, is always a serious complaint. It may sometimes be relieved by mixing rock-candy with the yolk of a fresh raw egg and taking this two or three times at night, by eating fresh raisins, or tying a woollen stocking about the throat at night which has been worn by a healthy person; a perfect cure, however, can best be effected by the following remedies:

Chamomilla may be given, especially to children, if there is hoarseness with catarrh, tough mucus in the throat, with dryness, burning and thirst; tickling exciting

the cough; fever in the evening; the disposition cross, vexatious, or serious and quiet.

Nux vomica, to persons of sulky, quarrelsome, obstinate and headstrong disposition, for a rough, deep, dry cough, arising from dryness in the throat, with pressure and pain in the throat, the mucus cannot be loosened; attended with alternate chills and heat.

Pulsatilla, for hoarseness accompanied with stinging and soreness in the throat and palate; pain when swallowing; catarrh, with much yellow, green and offensive discharge; a loose cough and pain in the chest, with chills; without thirst; and with a capricious appetite. It is particularly applicable when the patient has for several days been unable to speak a loud word; if *Pulsatilla* does not suffice, give *Sulphur*.

Mercurius is the principal remedy when the voice is hoarse and rough, with burning and tickling in the larynx—a disposition to perspire easily, sweating does not, however, relieve the patient, and when every breath of air aggravates the trouble.

Phosphorus, for hoarseness, with cough and rawness in the larynx, worse in the evening; cannot talk on account of pain in the larynx. This remedy will, perhaps, be more frequently required than any other.

Capsicum in hoarseness accompanied with itching and obstruction of the nose, or with cough producing pain in different places.

Rhus, if there is hoarseness with roughness of the throat; much sneezing and discharge of a great deal of mucus from the nose without its being a real catarrh, and with shortness of breath.

Apis, if the larynx is very sensitive, the throat not only rough but dry, with difficult breathing only on motion.

Sambucus, for hoarseness with deep, hollow, dry cough, which occasions catching of the breath, or with yawning, uneasiness and thirst.

Carbo vegetabilis, for protracted hoarseness, worse morning and evening, and after talking; it is also efficacious in hoarseness, following measles.

Silicea for hoarseness accompanied by chronic catarrh.

Drosera, in hoarseness with hollow and deep voice.

Causticum, in obstinate cases of hoarseness, when the patient has no other complaint, or if combined with catarrh and cough, soreness and rawness of the chest and occasionally of the throat.

COUGH.

Cough may be either combined with cold in the head, being more or less to the chest what cold in the head is to the nose; or it may arise from other diseases. In the former case the appropriate medicine should be selected from among those recommended for cold in the head; in the latter, the respective symptoms with which the disease is attended, must be taken into account. For instance, if there is a dry, hacking cough, violent pain in the chest, which is worse when breathing, if the patient was taken with a chill followed by much heat and the pulse is quick and hard; there is inflammation in the chest, and you have to administer the remedies prescribed for that complaint.

The medicines which are here first mentioned, will seldom cure a cough of long standing; you must have recourse to those, the effects of which are more enduring, and which are described towards the end of the list. In most cases an obstinate cough can be cured only by a homœopathic practitioner; but often it is a symptom of a disease which is already incurable.

Nux vomica should be given for a dry cough, which is caused by a rough, scraping, acrid sensation in the throat and tickling in the palate; when it is lasting and weakening, with pain as if the head would burst, or a sensation as if bruised in the upper part of the abdomen, with pain afterwards under the ribs, particularly when the cough awakens the patient early, or is then worse, or only a little mucus is ejected with much effort. Also when a slight cough lasts the whole day, with pain in the pit of the throat, and is worse in the evening, but better during the night; when during the night the breathing is op-

pressed, there is a feeling of weight upon the chest, and the patient has heat and a parched mouth. For energetic and plethoric patients, who drink much coffee and spirituous liquors, *Nux vomica* is particularly suitable. It also answers for a dry exhausting cough, which is worse during the night with trifling expectoration in the morning, or worse from reading, thinking and exercise.

Chamomilla should be given for a similar dry cough, which is worse at night, even during sleep, and arises from a tickling in the pit of the throat—something rising in the throat and taking away the breath—particularly in children, and during the winter after taking cold. Also for a tickling cough, which is caused by talking, is worse in the morning and evening, but which ceases after the patient gets warm in bed; also when in the morning some tough, bitter mucus is coughed up.

Hyoscyamus helps a dry cough, which is worse at night, and prevents sleeping, especially worse when lying down, and better when sitting up, with tickling in the wind pipe, or when the cough comes in spasms, sometimes attended with stitches over the eyes, or with soreness in the muscles of the abdomen.

Ipecacuanha is frequently useful for children—even for the smallest—when on coughing the mucus almost suffocates them; when the cough is spasmodic, or affects them so much that they can scarcely breathe, and they become purple in the face, and the limbs get quite stiff. The same remedy answers when there is a tickling sensation in the larynx, with sensation of contraction, the cough quite dry, or a trifling expectoration of mucus of an offensive taste, or when it causes loathing, nausea and vomiting of mucus; when it is attended with pain in the abdomen, particularly about the navel, or a pressure upon the bladder, as if the urine could not be passed, or there is a throbbing in the head and pit of the stomach, and soreness of the chest; after the cough, shortness of breath and sweat of the forehead; walking in the cold air excites the cough afresh.

Belladonna for a similar spasmodic cough, which does not allow the patient to recover his breath, which shakes the whole body, and is excited by a constant insupportable tickling in the larynx, without any phlegm in the chest; or as if caused by something like down in the throat, particularly if the cough is barking and afterwards inspiration is impossible for a while, with a bursting sensation in the head, with a feeling of pressure in the nape of the neck as if it were breaking, or for a cough attended with a scanty discharge of mucus, mixed with blood, stitches in the chest and on the left side below the ribs; tearing pains in the chest; short, quick, anxious breathing; chapping of the lips, red face, and pain in the head; or when the attacks terminate with sneezing, accompanied by catarrh, like that described under *Hepar*, or stitches in the hips and deep in the abdomen, as if something were giving way.

Mercurius for a dry cough, which exhausts and shakes the patient much, particularly at night; or a tickling cough before falling asleep; sometimes attended with spitting of blood, piercing pains in the chest; in the case of children frequently attended with bleeding of the nose, inclination to vomit, pains as if the chest and head would burst, accompanied by hoarseness, fluent catarrh, or diarrhœa.

Carbo vegetabilis for spasmodic cough, coming on several times during the day or evening, attended with retching and vomiting, heat and perspiration, soreness of the chest, white, gray or yellow expectoration, coughing up of blood, with burning pains in the chest; pain in the larynx, as from ulceration, shooting pains through the head.

Capsicum for a dry cough, worse in the evening and during the night, and which sometimes excites vomiting; pains shooting through different limbs; rending headache; sometimes accompanied by oppressive pains in the throat and ears, or with drawing pains from the chest to

the throat, stitches in the chest and back, or pressure on the bladder and shooting pains in that region, or stinging and tearing pains from the hips to the knees and feet.

Apis for a cough which is caused by a tickling in the pit of the throat, worse in the evening, or before midnight, after lying down, or after sleeping, and which is better as soon as any phlegm is raised; with headache and shortness of breath; after a rash, particularly nettle-rash, which had preceded it or which did not develop completely.

Rhus for a dry, short night-cough, commencing with a tickling in the chest, which causes agitation and asthma, particularly in the evening and before midnight, whereby the head and chest are shaken a great deal; or with tightness and shooting pain in the chest, pains in the stomach, sometimes stitches in the thighs; particularly when the cold air makes it worse, and heat and exercise affect it favorably; also for cough with a taste of blood in the mouth.

Nux moschata for a cough, which gets much worse after one becomes warm in bed; for a dry cough with loss of breath; after taking cold from wet feet, or standing in the water; after being overheated from hard work; particularly for those who easily become hoarse when walking against the wind and who have a cool, dry skin, and like warmth, and are made absent-minded by taking cold; in general for inconstant people.

Cina for a dry cough, at times accompanied by expectoration of mucus; in children who start suddenly as if they were losing their senses; afterwards with anxious gasping for breath, moaning and paleness, or a hoarse, hacking cough every evening, particularly in children who have worms; or at the same time fluent catarrh, with a burning sensation in the nose, and violent sneezing, which makes them cry; also when they object to being touched.

Ignatia for a dry cough, during the day as well as by night, with a sensation as if there were something like down in the pit of the throat; worse towards evening, with an irritation increasing with the cough, or with a feeling of contraction in the pit of the throat; with a fluent catarrh; in persons who have been affected by grief, or when the cough grows worse every day after meals, in the evening after lying down, and in the morning after getting up.

Euphrasia or *Cepa* for a cough with catarrh; much sneezing; running and soreness of the nose; when the eyes are affected, are red with aversion to light; great flow of tears, and when the cough causes loss of breath; much rattling of phlegm in the chest; chilliness. *Euphrasia* if worse during the day, particularly in the morning, no cough in the night, worse in the open air and aversion to it; head and eye symptoms worse on the right side; the tears being acrid. *Cepa* if the cough is worse towards evening and during the night; if the loss of breath comes on in the middle of the night; head and eye symptoms worse on the left side; while the discharge from the nose is corrosive and the tears bland; better in the open air, and desire for it.

Pulsatilla for cough which ceases in the open air, and becomes very violent in the warm room, also when the cough is dry in the beginning for half a day, with retching; then attended with expectoration of mucus, which is easily raised; sometimes streaked with blood; in the morning much yellow, salt, bitter, disgusting expectoration, sometimes accompanied by retching; the wind-pipe at the same time feeling rough, and the abdomen and sides sore as from a bruise, or there are shooting pains in the arm, shoulder and back; or the urine escapes whilst coughing.

Bryonia answers for a dry and for a moist cough; for a dry one, when commencing with a tickling in the throat,

or when the attack comes on after eating, and is so bad as to cause vomiting; or for a cough which begins as soon as the patient gets into a warm room; or with severe stitches in the side, and afterwards a trifling spitting of blood; with a yellowish expectoration; when every fit of coughing is felt in the head, or is accompanied with shooting pains in the head, throat and chest; in general for a hard, shaking cough which causes pain in the head and abdomen.

Cinchona when there is an inclination to a short hacking cough, as if caused by the fumes of sulphur, without any discharge of mucus, which is present, however, in the larynx, and causes a whistling noise when breathing; the expectoration which follows is streaked with blood; with pressing, stinging pains in the chest and windpipe; or consists of a clear, tough mucus, which is difficult to loosen, with pains in the shoulders, sometimes accompanied by vomiting of bile; and for cough after hemorrhage from the lungs.

Arnica for cough with expectoration of mucus and clotted blood, or light, frothy blood, at the same time asthma; oppression of the chest; the ribs and the abdomen feeling as if bruised and lacerated; stitches in the head, chest, abdomen, and small of the back; also for loose or dry cough in children, early in the morning or when asleep, with crying and screaming.

Veratrum for a deep hollow cough, as if proceeding from the abdomen, with griping, salivation, blue face, involuntary urination, violent pains in the side, and at the same time difficulty of breathing and great weakness, sometimes accompanied by stitches which pass downwards through the abdomen, with a sensation as if a rupture were about to occur.

Arsenicum for a loose cough with but little expectoration, which is, however, tough, difficult to expectorate, and causes constriction of the chest; coughing each time

after drinking; for cough during the night, with spitting of blood, and burning heat all over the body, want of breath, extreme fatigue and weakness; or every evening dry cough, which is very weakening; with oppression of the chest when going up stairs and in the cold air; also palpitation of the heart and agitation during the night.

Dulcamara for a loose cough, particularly after taking cold, with hoarseness, sometimes accompanied with spitting of bright red blood during the night; or a whooping, barking cough, excited by deep inspirations; cough from taking cold, aggravated by being in a room, and by lying still; better when moving.

Drosera for a loose cough or for a dry one, accompanied by hoarseness, pain in the chest and under the ribs, so that the patient is obliged to hold the painful part with his hands; sometimes attended by retching and griping in the abdomen, when the expectoration is tardy; vomiting of food and of phlegm and water afterward; discharge of bitter disgusting purulent matter; or with oppression, as if while coughing, the breath remained in the chest, so that both coughing and speaking seem impossible.

Staphisagria for cough with expectoration of yellow mucus, resembling pus, particularly during the night, with pains as if caused by ulceration under the breast-bone, collection of water in the mouth, occasional spitting of blood preceded by a feeling of scratching in the chest, and involuntary discharge of urine.

Phosphoric acid, for cough with expectoration, great hoarseness; coughing occasioned by tickling in the pit of the stomach or pit of the throat, dry in the evening, in the morning attended by a white or yellow discharge, or of dark blood; cough with oppressive pains in the chest, and expectoration like pus; when coughing, a bursting headache, inclination to vomit, and burning in the throat and chest.

Silicea, for lingering cough, with expectoration of much

mucus in transparent lumps, or yellow pus, with pressure on the chest, the cough so shakes the patient as to cause pain in the throat and abdomen; or a deep, hollow cough, with spitting of blood; dry cough, with pain and soreness of the chest; or a cough which threatens to suffocate the patient in the night, or with shortness of breath and emaciation.

Sulphur, for chronic dry cough from tickling in the throat, coming on in the afternoon and continuing till toward midnight; coughing with constriction of the chest, and retching; only during the night, preventing the patient from sleeping; or dry during the night, but during the day attended by yellowish, greenish, offensive expectoration, or thick mucus, pus and blood; when coughing, single stitches in the chest or under the ribs on the right side; feeling as if the chest were about to burst when coughing or sneezing; the chest feels narrow and full, difficulty of breathing, whistling and rattling in the chest, palpitation of the heart, the patient is obliged to sit up during the night; or when the cough is attended by a bursting pain in the head, blackness before the eyes, heat in the head and face, but cold hands.

Calcareæ, for a tedious cough, caused by tickling as from down in the throat, so violent in the evening and during the night that every blood-vessel throbs, or in the night, during sleep, dry cough with pain, or rattling in the chest, particularly in very fat children, where *Ipecacuanha* suits, but does not suffice; for cough with copious expectoration, particularly during the day, lumpy, purulent, yellow, greenish, brown, so offensive as to cause vomiting; when coughing, a stitch in the side and chest and burning in the latter; tearing and shooting pain in the head; also a stitching pain in the side when breathing deeply, when moving and bending; in the evening, heat, then chills and thirst, night sweats, particularly on the chest, great weakness, and much anxiety respecting the malady.

Lachesis, for cough excited by pressing the hand upon the chest, the patient unable to bear anything about the neck, coughs during the night in his sleep; or feels a tickling in the pit of the throat, the whole chest, up to the shoulders, feeling sore, with stitches in the side, and spitting of blood; or coughing as if something fluid had got into the windpipe; or violent cough from ulcers in the throat, with retching, hawking up of phlegm, and much saliva in the mouth; difficulty in expectorating; the cough much worse after meals, after sleeping and after rising; at the same time pain in the throat, ears, head and eyes.

Causticum for a protracted, dry, short cough, or for a hollow one, with excoriating or burning pain in the chest and in the windpipe; scraping in the throat and rattling in the chest; pain in the hip, as if going to burst open, or other rheumatic pains; the urine escapes while coughing.

For chronic cough, choose particularly among the remedies recommended last: *Causticum*, *Lachesis*, *Calcarea*, *Sulphur*, *Silicea* and *Phosphoric acid*; but should they not, though agreeing with the symptoms, effect a permanent cure, use *Staphisagria*, *Dulcamara*, *Arsenicum* or *Carbo vegetabilis*. The remaining remedies are most efficacious in coughs which are not of long standing.

When a cough, appearing suddenly, is accompanied by pressure in the chest, difficulty of breathing, pain in the throat and windpipe, attended with soreness and rawness, especially if after coughing at night a burning sensation remains, with rough and hoarse voice, fever and a quick, full hard pulse, always commence by giving *Aconite*, and from five to six hours after, or the following morning, the suitable remedies for the cough.

But when the cough is very exhausting and suffocating, with much mucus in the chest, give first *Ipecacuanha*, and a couple of hours after, if necessary, another suitable remedy.

When the cough is rough and hollow, and there is barking, or whistling and wheezing, particularly with children, examine what is said of whooping-cough, croup, and suffocating cough, and compare the remedies there prescribed with those indicated here.

In recent coughs, with cold in the head, it is always best to keep warm, and guard against further cold for a few days; but this ought not to be carried to excess, or the patient will become more and more sensitive to cold. For children, it is much better that they should go out every fair day, and be washed daily in cool or cold water. Children who are liable to get their feet wet should wear rubbers. A person affected with cough should occupy, not a cold, damp room which lies to the north or northeast, but a dry room facing the south.

Those who are subject to catarrhs and coughs, or sore throat, will be much benefited by washing and rubbing the whole body every day; it is sometimes useful to wear a black or white silk ribbon around the neck, or a silk stock fitting closely around the neck; cotton should be worn next to the skin, but no wool or flannel, which is only suitable for sailors and others who are frequently drenched to the skin by the rain.

In cases of cough, particularly in children, sweet things, as rock-candy or figs, may be allowed. Gum arabic likewise. All other things are injurious. Honey is good in some cases, but must not be used when taking homœopathic medicine. Goose oil or chicken fat may be used externally for obstruction in the nose or chest, but if it does not soon afford relief it is better to discontinue it.

Drawing cold water into the nose is dangerous in cases of severe catarrh—it may be tried carefully only in cases of very tedious catarrh and cough. Foot baths are only allowable when anxiety, suffocation and a small hard pulse accompany the cough; but then immersing the arms is still better.

Never refuse cold water to a person who suffers from a cough, although it should make the cough worse every time; and force no one to take warm and intoxicating drinks—it is a practice which has sent many a patient to the grave, and subjected others to long and severe tortures. Experience has proved that cold drinks are beneficial in all cases when the patient desires it; warm drink relieves only for a short time and always debilitates in the end. Hot milk with water and sugar may be taken as a sudorific in the evening, but no decoctions of any kind, which only ruin stomach and skin.

The idea that purgatives may benefit a cold is a foolish superstition. They are not only useless but very often injurious.

The use of emetics for every hollow sounding cough for fear of a usually imaginary danger is perhaps more excusable, but they always weaken the stomach, and are injurious in other ways.

WHOOPIING-COUGH.

This affection has been divided into three stages, the *first* or febrile stage resembling ordinary catarrh, attended with chilliness, slight fever, depression, increased flow of tears, sneezing and discharge from the nose, along with a dry, fatiguing cough, which returns in paroxysms.

The duration of this stage is various—it may last for a few days only, or may continue for weeks. It seldom, however, exceeds a fortnight.

In the *second*—the nervous and spasmodic or convulsive stage—the characteristic symptoms of the disease present themselves.

The cough becomes excessively violent and distressing; the patient, feeling its approach, runs to lay hold of some object to support himself until the paroxysm is ended. These paroxysms occur more frequently at night, and consist of a series of forced, quick and unequal expirations, which follow each other so rapidly that inspiration is impossible. The face becomes swollen and livid; tears are discharged copiously; the veins of the neck are prominent; a profuse perspiration breaks out, and suffocation appears imminent. Very soon, however, short, imperfect inspirations are effected, and then a long, slow and laborious inspiration, accompanied by a peculiar noise, which has been compared to a whoop, and from which the disease takes its name. The paroxysms sometimes succeed each other every five or ten minutes, in other cases not more than four or five occur during the twenty-four hours. They are usually terminated by a fit of coughing and discharge of ropy mucus, or by an attack of vomiting. It is not an uncommon occurrence for blood to be discharged from the nose, and occasionally from the mouth and ears, during the paroxysm, and the eyes are also frequently greatly injected. Pneumonia is a frequent complication of this stage of the disease.

The duration of this period is various; sometimes it terminates in two or three weeks, at others lasting for months. The average is perhaps from two to four weeks.

The *third stage*, or the *stage of decline*, is made known by the paroxysms growing shorter and shorter, and less violent and frequent; the whoop gradually disappears, and the cough does not differ from that of ordinary catarrh, and gradually ceases.

Whooping-cough is almost entirely a disease of childhood, and one which very few individuals escape. It usually prevails as an epidemic and is contagious. It is probably most easily communicated in the second stage, after the disease has become fully formed, and during the decline.

Aconite, when at the commencement of the disease the cough is dry and whistling, accompanied by fever; the patient complains of a burning pain in the larynx, and sometimes points to it with the finger.

Dulcamara, if the attack was apparently brought on by a severe cold; the cough loose and expectoration copious, accompanied by hoarseness.

Pulsatilla, for loose cough with vomiting.

Nux vomica. Cough dry, accompanied by vomiting and great agitation, blueness of the face, fear of suffocation; the cough coming on particularly after midnight, and lasting till morning. If after *Nux vomica* the cough becomes loose with expectoration, give *Pulsatilla*. If vomiting ceases but fear of suffocation continues, give *Ipecacuanha*. Should the cough continue after *Ipecacuanha* has been given, or if in the beginning the cough is spasmodic, with a hollow sound, and the attacks come several times every day but particularly in the morning and before midnight; if the throat is red with pain on swallowing, the eyes weeping, give *Carbo vegetabilis*. It is also indicated when children complain of stitching pains in the head, pains in the chest and throat, or have an eruption on the head or body. This remedy is also useful in the third stage of the disease.

Belladonna, if in the beginning the cough is dry and hollow, or harsh and barking, worse at night, with congestion to the head, and headache or sore throat.

In the second or convulsive stage, *Ipecacuanha*, *Veratrum*, *Drosera* and *Cina*, will be found of most benefit.

Ipecacuanha given after every paroxysm of coughing, has helped many cases.

Veratrum is especially indicated when there is great weakness, fever, cold perspiration, particularly on the forehead, with quick, weak pulse and much thirst. And also when, during the paroxysm, there is involuntary discharge of urine, or when there are pains in the chest, the abdomen and the groin; when between the paroxysms the patient is not very lively, and shuns exercise; and the neck is so weak that it can hardly support the head; when there is great chilliness and much thirst, and no inclination to

speaking; also when the body is covered with a dry and scattered eruption, or the eruption appears on the hands and face only. If the eruption remains or is brought out after *Ipecacuanha* or *Veratrum*, wait some time before giving another remedy; if the cough is only at night, give *Rhus*.

Drosera will be found most serviceable when the cough is worse during the night; the patient is worse at rest than when in motion; when the chilliness is not accompanied but followed by thirst,—the sweat is not cold, but rather warm, and occurs only at night; or when the cough sounds loud and clear, the paroxysms very violent, and either unaccompanied by fever, or with chills or heat.

Cina is suitable, when during the cough the children become quite stiff, and after the paroxysms there is a gurgling noise, which appears to descend from the throat into the abdomen, and also in children affected with worms, when there is a disposition to pick the nose, with griping in the abdomen, itching of the anus. For children who have had worms formerly and who pass large round worms, also when the children are hungry during the fever. It is particularly adapted to selfwilled children with black hair and eyes, while quiet, tractable children, with blue eyes and blonde hair are more affected by *Belladonna*.

Calcarea is beneficial if the cough always comes on while eating, and the food is immediately thrown up.

Cocculus has also often been given for this symptom, frequently to teething children.

Kali carbonicum, if the paroxysms are worse after midnight, particularly three o'clock and more frequent in the morning, when the children vomit the food taken the previous evening; face swollen particularly about the eyes, above the upper eyelid like a bag.

Cuprum metallicum has been found most suitable in cases in which entire rigidity of the body or convulsions ensue after each paroxysm, also when there is vomiting after the attacks and rattling of mucus in the chest while coughing.

This remedy will in many cases produce a marked improvement, sometimes indeed shortening the duration of the disease very considerably. After it *Veratrum* generally acts most favorably.

Mercurius. Cough mostly at night, and occurring in two successive paroxysms which follow each other in quick succession, after which there is a considerable interval of repose; also for cough with vomiting and bleeding at the nose, the blood soon coagulates; perspiration at night, with great sensitiveness; it is especially suitable for children who have suffered from worms.

Arnica is useful when there is considerable hemorrhage from the nose and mouth, or the eyes are injected with blood, when blood is extravasated round the eyes, and they appear as if bruised, and also when each paroxysm of coughing is followed by crying.

Hepar, when the cough is diminishing, but is still dry and hoarse, or hollow and ringing, with occasional retching, followed by violent fits of crying.

When the disease has for a complication pneumonia or capillary bronchitis, *Ferrum phosphoricum* is often useful and may be given when there is much fever, the cough becoming dry and hard, or when there is much fine rattling in the chest.

Antimonium tartaricum, taken at the commencement of the whooping-cough, will in some cases cut short the disease, or greatly diminish its violence. It is also frequently beneficial in the more advanced stages, and where the air-tubes are apparently choked up with mucus, the cough sounding as if there was much phlegm in the chest, which however will not come up. The face of the sufferer is perhaps quite bluish.

The *third* or declining *stage* requires for its treatment the same remedies which have already been recommended in the first stage and in cough or ordinary cold, and must be selected according to the indications there given. Change of air, when it can be had, is very useful in this stage.

During the treatment of whooping-cough the diet must be light and easily digestible, and all kinds of stimulants scrupulously avoided.

Mental emotions should also as much as possible be guarded against, as they greatly add to the violence, and increase the frequency of the attacks of coughing; this is particularly the case with fits of anger.

CROUP.

This dreaded disease can, in most cases, be easily cured with homœopathic remedies, so that scarcely one-fifth as many cases prove fatal, as when treated by the old method. It requires, however, great attention; parents ought to be well-acquainted with the symptoms, as it is always a dangerous disease.

Children are usually troubled with a slight cough a few days before the croup makes its appearance; the voice is hoarse, and sometimes the cough is in the beginning somewhat hollow, then give *Aconite*. By selecting one of the remedies recommended for "Cough," the complaint may, in some cases, be prevented. When the cough is hollow and wheezing, *Hepar* should always be first given. After this *Sambucus*, *Hyosciamus* and *Cina*, or *Nuxvomica*, *Veratrum*, *Chamomilla* and *Drosera*.

If children wake suddenly at night, and begin with a choking cough, either from want of breath, or an accumulation of mucus in the throat, give *Antimonium tartaricum*.

Sometimes croup appears without any of these premonitory symptoms. The child awakes about midnight with the croup; the cough has a shrieking, sharp sound, like the braying of an ass, or like the attempt at crowing of a young cock. It sounds very hoarse; somewhat shrill and hissing, or quite rough, deep and hollow, like the hoarse bark of a dog. The patient inhales with great difficulty and slowly, and emits the breath in jerks. He is much agitated and tries to obtain relief by stretching out the neck.

At this stage the disease is not so alarming as it appears, but it should not be neglected. The best way to lessen

the agitation, and make the symptoms yield more easily, is to bathe the arms as quickly as possible in very warm water. Let both arms be immersed in water, as warm as the patient can bear it, and remain until the choking cough ceases. At the same time give *Aconite* every ten, twenty or thirty minutes, according to the urgency of the case.

In most cases this first attack soon passes off, but the child remains cross, and retains the hoarseness of voice. If, during the night, *Aconite* has been given, give *Hepar* in the morning. Keep the child warm the next day, and on low diet; do not let the child sit on the floor; nor must it have any fruit, not even grapes, or berries; flannel may be put round the neck. In the winter let the child sleep in a moderately warm room, and give *Spongia*.

If the cure of the disease is not effected in this manner, and the attack returns the second night, the child complains of a burning sensation in the throat, or points with the finger to the larynx, which is very sensitive, particularly when touched, somewhat swelled, or very hot. The paroxysms become more violent, as if the patient were in danger of suffocating, with increased fever and great thirst. The sufferer falls asleep, but soon awakes again with a worse attack. The breathing, during sleep, is oppressed and labored; the head is frequently bent back, so that the throat is made prominent and is very sensitive to the touch. If *Aconite* has not yet been given, give it now frequently. Bathing the arms in hot water is serviceable. A sponge dipped in hot water and applied to the child's neck as hot as it can be borne, very often does good in this stage. Do not cover up the head, but keep the feet warm.

If relief follows the administration of *Aconite*, and the paroxysms become less frequent and violent, if the patient perspires, all will be well; but if there is no improvement, or if the disease becomes visibly worse, notwithstanding

the remedies given, and the danger increases, give in a few hours *Spongia*; and if this does not soon effect a change for the better, *Hepar*.

Spongia is indicated if the voice is rough, the cough hollow, the breathing sawing, piping; can be heard for a long distance. *Hepar*, if the voice is only lisping, the cough crowing, the breath a mere aspiration.

If the breathing grows so faint as to be hardly perceptible between the attacks, give *Belladonna*.

Spongia is to be preferred if the attacks are worse at midnight. *Hepar*, if they begin towards morning, or grow worse again, if the cough becomes loose, or the breathing makes no other sound than a little rattling. If the children sneeze, particularly on awaking from sleep, give nothing more until they grow worse again and then compare to see which remedy is best indicated.

Arsenicum helps if the children have formerly often had nettlerash, especially just before the croup, if they grow worse soon after midnight, constantly toss about, the cough not distressing them, if they show great fear, or agitation, drink often but little at a time.

Belladonna, if the cough is suffocating and comes in sudden attacks; face red; jumping and tossing about, and the paroxysms cease as suddenly as they came.

Sometimes, when neither *Spongia* or *Hepar* have been of benefit, a teaspoonful of pure vinegar may be put into a glass of water with a little sugar, and a swallow given to the child from time to time as the cough is bad.

At the same time keep the child as quiet as possible, and give it from time to time a little mucilaginous drink.

When the disease advances, the hands and feet become cold, the pulse quite small, and the sufferer throws back the head as far as possible (by no means force the head forward, as it might cause suffocation); the belly expands and contracts considerably at every breath, but not the chest, at the same time a rattling is heard when breath-

ing, as if there was something in the windpipe, with the cough comes retching, and finally pieces of membrane are sometimes thrown up. The child is no longer red as before, but pale; during the cough it is of a bluish color in the face, the eyes start from the head, as from terror, and the child grasps convulsively with its hands.

If the above mentioned medicines, *Aconite*, *Hepar* and *Spongia* have been given, and the disease attains this point notwithstanding, try *Phosphorus*, which has sometimes saved a patient when all else has failed.

Goullon reports a case where the face grew pale and bluish, the voice was entirely lost, breathing was a labored piping, occasionally a soundless cough, dozing alternating with restlessness and clinging with the hands (probably the breath was cold) in which he successfully gave *Carbo vegetabilis*. Even in so severe a case do not despair—the most inexperienced homœopathic treatment is preferable to the tortures of the Old School.

Pouring very cold water on the head, nape of the neck and throat has been beneficial; this should always be resorted to if the patient grows cold and struggles with suffocation.

Arsenicum has also sometimes relieved such cases, and some claim that the vapor of liver of sulphur has given relief. For the remaining cough, give *Chamomilla*.

For the lingering hoarseness, give *Hepar*—if this has already been given, *Belladonna*—should this fail, *Carbo vegetabilis*, or if necessary, *Arnica*. For other remaining symptoms select a suitable remedy, guard the children against taking cold and should a hollow cough return after two weeks or more, particularly during dry west wind, repeat *Hepar*. During and a few days after convalescence give the children no fruit, not even grapes, as very often the most dangerous relapses have ensued after fruit.

CONGESTION OF THE CHEST.

The most prominent symptoms of congestion of the chest are: sensation of fulness, weight or oppression of the chest; palpitation of the heart attended with anxiety; short sighing; great difficulty in breathing, etc.

Aconite is serviceable when there is great shortness of breath, with violent heat and thirst, constant hacking cough, which disturbs the patient, particularly during sleep, and apprehension of danger. It will be found valuable in persons of a full habit, especially females of sedentary habits, who suffer from congestion before and after menstruation.

Belladonna may be used if *Aconite* is insufficient, or if the attacks return frequently, and also when the head is much affected.

Pulsatilla for good natured people, particularly women, if it comes on in the evening, or if the sleep is disturbed during the night by the throbbing.

Nux vomica for irascible people, when the affection has been brought on by sedentary habits, too free indulgence in the use of stimulants, and also when it arises in consequence of suppressed piles.

Ferrum, *Sulphur* or *Phosphorus*, will also be found useful in some cases. Advantage may be sometimes derived from dry cupping on the neck. For other remedies see "Determination of Blood to the Head."

Persons subject to this complaint should avoid violent exercise, such as running, dancing, etc., and stimulants of all kinds, as alcoholic, vinous and fermented beverages and coffee; they should use moderate exercise in the open air, drink freely of cold water, bathe the chest and arms daily in cold water, and not sleep too long in the morning.

HEMORRHAGE FROM THE LUNGS. SPITTING OF BLOOD.

When, on coughing, a little blood is expectorated, the danger, in most cases, is not as imminent, as many imagine. The blood frequently proceeds

from the nose, from diseased gums, or from the throat. When it is really from the chest, it is almost always accompanied by a sensation as if coming from a considerable depth; it is warm, generally tastes sweet, the taste of it precedes the rising of the blood, or there is at the same time a painful and burning sensation in the chest.

Under these circumstances everything should be avoided which could too much tax the power of the lungs, such as long and loud speaking, crying, singing, blowing the horn or the trumpet, all violent exercise of the arms, or quick running, ascending, particularly going up stairs. Sometimes this disease is produced by inhaling the dust or exhalations proceeding from such substances as lime, gypsum or plaster of Paris, metal filings, tobacco, or sulphuric acid.

When the discharge of blood is but trifling, and is accompanied with considerable coughing, a remedy may frequently be found among those recommended for "Cough," especially such among them as *Belladonna*, *Mercurius*, *Carbo vegetabilis*, *Pulsatilla*, *Hyoscyamus*, *Cinchona*, *Arnica*, *Dulcamara*, *Staphysagria*, *Silicea* and *Lachesis*.

But when the complaint has already existed for some time, and the blood is discharged in considerable quantities, or when it commences with a violent hemorrhage, there is danger, but not to such a degree as to be excessively alarming. Fear only makes the matter worse. It is seldom as bad as it appears. The life of the patient is not usually in imminent danger, unless there have been several previous attacks, or the patient has suffered long from other diseases, or the blood flows in large quantities. In many cases the bleeding soon ceases of its own accord. The most important object is the cure of the complaint after hemorrhage has ceased, for that is the most critical period, either from a return of the hemorrhage, or from the establishment of an incurable disease of the lungs.

On no account allow a vein to be opened during or after hemorrhage from the lungs; this remedy is worse than the disease, for it invariably aggravates it; but it is fortunate at the present, that few physicians offer to bleed for this complaint.

Blood-letting for hemorrhage of the lungs is most injurious in the case of individuals who have previously suffered from piles—and where the blood only takes another direction—or in women, who, instead of having their monthly periods, have spitting of blood. In these cases there is no danger whatever from the hemorrhage, for it will cease of its own accord, and all the bad consequences may be prevented by medicine.

After a heavy fall or blow upon the chest, give *Arnica*, and keep the patient on a low diet; if, after some days, pains in the chest and fever make their appearance, give *Aconite*, and if, after this, it gets worse again, repeat the *Arnica*.

You may also tie a handkerchief around the upper part of the left arm, as tight as the patient can bear it, and another around the upper part of the right thigh, and if this does not arrest it, on the other arm and thigh in the same way.

When the hemorrhage has entirely ceased, loosen the bandages gradually. While the bleeding continues, and also for a considerable time after it has ceased, the patient should remain perfectly quiet in a half sitting, half lying position, with plenty of pillows under the head and chest. The room should be kept cool and well aired and no warm drinks or stimulants of any kind allowed for eight or ten days. The food should be light and easily digestible, and the drinks principally mucilaginous.

All kinds of mental excitement, and particularly vexation and anger, should be carefully avoided. Advantage will also be derived from sleeping awhile during the day, especially before meals.

If the bandages do not speedily check the hemorrhage, dry cups may be applied to the abdomen and under the ribs, also on the pit of the stomach. As a substitute for regular cupping glasses, dip a piece of paper, cotton, or other light substance, in strong brandy or alcohol, ignite it, throw it into a tumbler, turn the glass so that the paper shall fall out, and apply the tumbler as quickly as possible to the bare skin. The closer the glasses adhere, the better; if you do not succeed at the first trial, repeat the experiment.

Cloths dipped in cold water, and applied to the lower part of the abdomen, will also be beneficial. No other cold application should be made, but small pieces of ice may be swallowed.

A little fine dry table salt is sometimes administered; this may do good, but if it aggravates the cough, it should be dispensed with.

When the cough continues, and brings on fresh attacks of bleeding, give the white of an egg, mixed with sugar, a teaspoonful at a time; or put a drop of sulphuric acid in a tumbler of water, and use it as a gargle, or take a teaspoonful every five or ten minutes.

In selecting a medicine, we should endeavor to choose one which will not only accelerate the cure, but, as much as possible, prevent a relapse.

When there appears to be great danger, select either *Aconite*, *Ipecacuanha*, *Arnica*, *Cinchona*, or *Opium*.

Aconite will have the preference when the slightest attempt at clearing the throat brings up blood, when the patient previous to the bleeding feels a sensation of ebullition of blood in the chest; the latter seems full, with a burning sensation; palpitation of the heart, agitation, uneasiness; is worse when lying down, with an anxious, pale countenance, and when the blood comes by gushes, and much at a time.

Ipecacuanha may follow the *Aconite*, if the latter has checked the hemorrhage, but there is remaining a constant taste of blood, with a short cough, discharge of mucus mixed with blood, nausea and weakness.

Arsenicum should be given if the *Aconite* is insufficient and the palpitation of the heart and agitation increase, and prevent the patient from sleeping, or disturb him when asleep, drive him out of bed, and are accompanied with a dry, burning heat. If the hemorrhage returns again, give *Ipecacuanha*, *Nux vomica* or *Sulphur*. And if, after these remedies, it still grows worse, repeat the *Arsenicum*. By these means the recurrence of the complaint may sometimes be prevented and the disease entirely cured.

Cinchona, when the cough which had been very dry, rough and painful, with a taste of blood, becomes violent and is accompanied by constant raising of blood; when the patient feels chilly, with occasional flushes of heat, is very weak, wants to lie down all the time, perspires occasionally, but not long at a time, trembles, has dimness of sight, or confusion in the head, or when he has lost so much blood as to become quite faint, or pale and cold, with twitches in the hands and face. *Ferrum*, *Arnica* or *Arsenicum* will sometimes be indicated after *Cinchona*.

Ferrum in slender persons of sallow complexion who do not sleep well at night; if the blood is brought up by a slight hawking, not in very great quantities, is quite pure and bright red, if there is pain between the shoulders, asthma, particularly during the night, the patient cannot sit, feels better when walking slowly about and yet must frequently lie down; is very weak, particularly after speaking, and the cough is produced by any considerable exertion.

Arnica, when the blood is clotted, black and raised easily; accompanied by asthma, shooting pains and burning contraction in the chest, palpitation of the heart, great heat over the body, with weakness, almost to faintness, and also when the blood is raised with slight cough, is bright red, frothy, mixed with small clots and mucus, sometimes accompanied by tickling under the breast-bone; coughing

produces shooting pains in the head, and all the ribs feel as if bruised.

Pulsatilla if the complaint has already continued for some time; if the blood is black, clotted; if the patient becomes very nervous during the night, feels cold, complains of weakness and pains in the lower part of the chest, with a qualmish sensation in the stomach, is reserved, inclined to weep, and indisposed to exert himself. After *Pulsatilla*, *Secale* may be beneficial.

Rhus in cases similar to the last, but when the blood is of a brighter red, or the patient is more anxious, irritable and uneasy, the symptoms aggravated by the slightest vexation, or when there is much tickling in the chest, worse at night.

Nux vomica, if the disease has been occasioned by spirituous liquors, or the suppression of piles, from cold, vexation or other causes; especially in passionate persons, and is accompanied by tickling in the chest, and cough which affects the head; and is worse in the morning. *Sulphur* should be given if no relief follows the use of this remedy.

If the hemorrhage arises from suppressed menstruation, *Pulsatilla* or *Bryonia*, sometimes *Cocculus* or *Veratrum*.

Opium, when the discharge is very thick and frothy, mixed with mucus, particularly for old people and persons addicted to drinking, or when the cough is worse after swallowing, accompanied by difficulty of breathing, asthma, and anxiety, with a burning sensation in the region of the heart, trembling of the arms, sometimes weakness of the voice, drowsiness and sudden starting, coldness, particularly of the extremities, or heat, especially of the chest, without sweat.

If after *Opium* there appears perspiration on the chest, with or without restlessness, give *Mercurius*. *Opium* may be repeated after a few hours if necessary.

Hyoscyamus, when the hemorrhage is accompanied with dry cough, particularly in the night, when lying down;

starting in sleep, etc.; also in persons accustomed to ardent spirits; it will follow *Opium* and *Nux vomica* advantageously when they prove insufficient, and may be followed by *Arsenicum*.

Belladonna, when there is a tickling in the throat, which excites coughing and aggravates the hemorrhage, with a sensation as if there was too much blood in the chest, and pains, particularly stitches, worse when in motion.

Dulcamara for the same symptoms as *Belladonna*; if they are worse when the patient is at rest; and when the blood is of a bright red color; the attack brought on by a cold; or when the patient has already suffered from a loose cough for a considerable time.

Carbo vegetabilis, when there is a violent burning sensation in the chest, even after the hemorrhage has ceased, particularly for persons who cannot bear the changes of the weather, or who have taken a great deal of calomel.

For the weakness which follows bleeding from the lungs, do not give too much medicine, good diet is of more consequence; let the patient eat often, but not much at a time; but little meat, plenty of milk, and occasionally eggs, flour prepared in different ways, and let him take exercise in fine weather. If he remains weak notwithstanding, and oversensitive, give *Cinchona* or *Ferrum*; if he is weak, but at the same time too lively, *Coffea*; and if cross and fretful, *Ignatia*; very much depressed, *Phosphoric acid*.

BRONCHITIS, INCLUDING CATARRH OF THE CHEST IN CHILDREN.

This disease consists of an inflammation of the mucous membrane of the bronchia, and is acute or chronic. The former is of frequent occurrence, alone or with measles, scarlatina, small-pox, whooping-cough, etc.

The most prominent symptoms are: chilliness, succeeded by fever; hoarseness; difficult respiration; severe, frequent, and distressing cough, at first dry or with scanty expectoration of frothy or viscid mucus, later

copious and streaked with blood; constriction of the chest with oppression; weakness, foul tongue, and loss of appetite; rapid pulse, increased difficulty of respiration; paleness of the lips, anxious countenance, wheezing; on applying the ear to the chest, a louder sound than the natural respiration, either rattling, whistling, or droning, or harsh and broken, according to the progress of the disease.

Symptoms of improvement are: a greater freedom of breathing, remission of the fever; altered expectoration, which becomes thicker, whiter, and diminished in quantity. It is unfavorable when the difficult breathing and debility increase; the face becomes livid, the body covered with a cold clammy sweat; the mucus accumulates rapidly in the bronchial tubes, and the cough, which has become feeble through the exhausted and sinking energies of the patient, is insufficient for its ejection; delirium appears, and the patient is carried off.

The frequency of the disease in infancy and early life deserves a particular notice. It is generally known by the name of *catarrh on the breast*; it commences as in adults, with the symptoms of a common catarrh; the breathing becomes quick and oppressed, and from the increased action of the diaphragm the abdomen becomes prominent; both the shoulders and the nostrils are in continual motion, but the wheezing is often more marked than the difficulty of respiration, and on applying the ear to the chest, a mucus rattle is heard over almost every part; expectoration sometimes temporarily relieves, and occasionally the mucus is expelled from the air-passages by vomiting; the countenance is pale and anxious, and somewhat livid:—these symptoms are interrupted and relieved by occasional remissions, during which the child generally appears drowsy; but they return with additional severity, and, if not checked, death may take place from suffocation. Coughing sometimes produces considerable pain, and the child for that reason frequently endeavors to suppress it. There is no appetite, much thirst, although when the disease has advanced, it is found difficult to take a long draught, from its impeding respiration; this is very observable with children at the breast, who, after eagerly seizing the nipple, will bite it and discontinue sucking, cry, and throw back the head, and after vomiting up the phlegm, continue for some time in that position.

Aconite may be given when the skin is hot, dry; the pulse hard, frequent; there is hoarseness with a rough voice; a short, dry and frequent cough, as if excited by a tickling in the throat or chest; difficult and quick breathing; anxiety, restlessness, tossing about, and more or less thirst.

Pulsatilla, if there is less heat, more coldness of the hands and feet, less or no thirst. The mucus is thick, yellowish, sometimes mixed with a little blood.

Tartar emetic in all cases, when the rattling of phlegm in the chest is remarkable from the first, when the patient is inclined to slumber much, often with the eyes half open; cries from being touched, but insists on being taken up and constantly carried about. Face bluish or pale and puffy. Drowsiness.

Belladonna, when there is severe headache, aggravated by coughing, oppression of the chest, and constriction as if bound, with rattling in the chest; short, anxious and rapid respiration; dry, fatiguing cough, worse at night, starts in his sleep, child cries when coughing.

Lachesis. Oppression of the chest, with short and hurried respiration and anxiety; dry, fatiguing cough, sometimes followed by the expectoration of a little tenacious or frothy mucus, after much effort, occasionally streaked with blood; symptoms worse after sleep and in the afternoon; face and extremities bluish.

Bryonia. Cough dry, with pain in head and chest, or cough with expectoration of viscid mucus; in some instances tinged with blood; dryness of the mouth and lips, excessive thirst; stitches in the chest hinder breathing.

Phosphorus. If the respiration continues oppressed, with a feeling of heaviness of a part or of the whole of one lung; dry cough, excited by a tickling in the throat or chest, aggravated by talking or laughing, or going into the open air.

Mercurius is useful when the symptoms are accompanied by excessive perspiration which does not relieve. Patient cannot endure either hot or cold air—tongue is coated a thick yellow—much thirst for cold water, which aggravates the cough. If the patient has a cold in the head, with watery, acrid discharge; nose swollen.

Ferrum phosphoricum has been found useful in many cases of bronchitis in children, when considerable fever exists, with flushed or pale cheeks and the rattling is heard all over the chest—a greenish watery or slimy diarrhœa is often present.

Ipecacuanha, if there is mucus rattling in the chest, and when on coughing the patient is almost suffocated by the excessive secretion of mucus, and becomes livid in the face; shortness of breath, and perspiration on the forehead after each fit of coughing.

What is to be done for Chronic Bronchitis will be found under the head of "Cough."

PALPITATION OF THE HEART.

The causes of this complaint will frequently indicate the remedies; it is generally produced by violent emotions of the mind, or by the use of ardent spirits; indigestion is also a frequent cause. Drinking cold water, particularly before going to bed, and eating but little in the evening is the best remedy for young people. Persons who are troubled with this complaint usually sleep better on the right side than on the left, and prefer to have the head rather high; they must drink neither coffee, tea, nor chocolate.

For mental emotions in general, give *Aconite*, but it will soon lose its affect, if repeated too often. If it is caused by vexation, give *Chamomilla*, by fear or anguish, *Vera-trum*; by joy, *Coffea*; by great agitation and anxiety, either *Opium* or smelling of a bitter almond crushed, will be found to be beneficial.

With pregnant women, when connected with weakness of the nervous system, spasms and faintness, when it returns frequently, give, from time to time, a very little old wine or a drop of brandy. During the attack it is sometimes better to give a spoonful of hot water, particularly when the skin is very dry. Women of a pale complexion may experience some benefit from smelling vinegar, but it is very much better to use the following remedies.

For plethoric persons, *Aconite*; after this, *Nux vomica* or *Belladonna*. In persons of weak nerves, *Ignatia*; and when worse while lying on the side, *Pulsatilla*.

Spigelia is an important remedy for those who have palpitation often, especially if their breath is offensive.

Nux moschata for palpitation with fainting, and afterwards sleep, particularly if preceded by exertion; or for persons who are inclined to faint, or have, in general, the symptoms of *Nux moschata*, as stated under "Cough," "Headache," etc.

Cinchona is most suitable for persons who have been much weakened by the loss of fluids, and are troubled with a sour stomach, much wind and sleep restlessly.

Glonoine, for palpitation after sudden cooling off, when over-heated, from violent mental emotions, after many rapid changes of different influences, either with heat of the face, quick pulse, or beating felt in the head, or with the face pale, very slow or scarcely perceptible pulse; labored beating of the heart with heaviness, pressure and heat in the heart, and pains into the back.

Belladonna, when the palpitation of the heart produces a droning sensation in the head, when the chest feels full, or when there is an uneasy and throbbing sensation in it, particularly in women, after confinement, or when the milk fails, or after weaning. In the latter case, give *Cinchona* some time after.

Sulphur, for the same symptoms as *Belladonna*, when it proves insufficient; especially if the palpitation is consequent upon the suppression of an eruption, or the healing of an old ulcer. Also, when going up stairs or ascending a hill has occasioned palpitation for a considerable length of time.

Arsenicum may be given after *Sulphur*, when the latter does not suffice, particularly when caused by suppressed eruptions or ulcers. It is also serviceable when the palpitation comes on during the night, particularly after midnight, with great agitation, is very violent, with burning heat in the chest; with difficulty of breathing, and is worse when lying down, better when in motion.

Veratrum is suitable in cases similar to the last mentioned medicine, when accompanied by difficulty of

breathing and agitation; particularly if better on lying down, and worse when rising or in motion.

For chronic palpitation of the heart, when the remedies prescribed give only temporary relief, apply to a homœopathic practitioner, and submit patiently to medical treatment even though no decisive advantage be immediately perceived, otherwise an incurable disease of the heart may be the result.

ASTHMA.

The paroxysms of asthma come on at times suddenly, often in the night during sleep, waking the patient. There is a desire to take a long breath without being able to get relief from the suffocative sensation; all the muscles of breathing are brought into play, the head is thrown backward and the patient must sit erect with the arms thrown back to facilitate breathing; he lays hold of any object that may afford him support; the inspirations are quick, and after each expiration a distinct pause before inspiring again, as though the patient had to make an effort of the will before breathing again; rattling, hissing, whistling sounds are heard all over the chest; he wants the windows or doors thrown open, that more air may be admitted. The face is pale or livid; the eyes anxious and protruding, and the forehead is covered with a profuse, cold sweat. After some time, fifteen minutes to several hours, the attack ends either suddenly or the relief comes gradually, attended with belching, yawning and cough, with expectoration of a little mucus. The rattling in the chest, which is now moist, may continue for some time.

The causes are various: atmospheric changes, odors of different kinds—agreeable and disagreeable—smoke; dust; gases; metallic and other particles floating in the air; chamomile tea; ipecacuanha; vapor of sulphur, etc. Also irregularities of diet, especially taking food in too great a quantity, or of improper quality; abuse of alcoholic liquors; the suppression of any accustomed discharge; overexertion and mental emotions. Asthma is more frequent in advanced than in early life.

In sudden attacks of asthma relief may be obtained by immersing the hands in hot water, or by the application of dry cups to the stomach or pit of stomach, in the manner recommended under "Hemorrhage from the Lungs." Bandaging the arms above the elbow is often beneficial, the left arm first and afterward, if necessary, the right, and the lower limbs.

When the attacks originate from the use of chamomile tea or ipecacuanha, etc., smell camphor or sweet spirits of nitre, or take a little coffee without milk. If caused by inhaling the fumes of sulphur, *Pulsatilla* is better.

For attacks which come on immediately after meals, or after a nap, when the patient cannot breathe, draws and stretches the neck as if suffocating,

the throat feeling dry and too narrow, without much agitation: chewing a little ginger mixed with sugar, may be beneficial.

Weak anise-seed tea, a teaspoonful taken at a time, especially in the evening, is sometimes of benefit when the attack is brought on by a cold, and is accompanied by dry cough.

Persons subject to this complaint should take warm drinks, occasionally rub the body with a coarse, wet towel, and walk in the sunshine.

Attacks of asthma as well as other pulmonary diseases which are brought on by inhaling fine dust, as frequently happens with stone-masons, millers, and others engaged in dusty occupations, may be guarded against by wearing something before the mouth to intercept the fine particles floating in the air. Nature has furnished men with a partial safeguard from such causes of pulmonary disease in the moustache, which ought never to be shaved off in the case of workmen in such occupations.

When old persons suffer from shortness of breath they are very apt to say it is old age, and for this there is no remedy. But this is not the case. There is no reason why old people should not be healthy, or become so, if properly treated. The difficulty in breathing is often caused by the ribs becoming stiffer and not moving so easily, in other words the soft cartilages harden; when this is the case, let the patient drink buttermilk three times a week, for this tends to hinder the hardening of the cartilages, and to soften those already hardened.

Ipecacuanha will be indicated when there is a feeling of constriction about the chest; panting, rattling in the wind-pipe, as if full of mucus, which seems to be moving up and down; or the patient feels as if the air were full of dust, which prevents his breathing; gasps anxiously for breath, and fears suffocation; the face being pale, and the hands and feet cold. After *Ipecacuanha*, it may be necessary to give *Arsenicum*, *Bryonia* or *Nux vomica*.

Arsenicum for the most violent attacks of asthma, especially those occurring in consequence of suppressed catarrh, or in persons with weak lungs; when worse about midnight, the breathing becoming more and more difficult, and there is a rattling in the chest, with agitation, moaning, groaning, and uneasy tossing about; or particularly when old people are attacked by it when walking; when they can breathe, but the distress continues; when there is a pressure at times about the heart, worse upon the least motion or exercise, particularly getting into bed.

If the attack becomes worse again after the administration of *Arsenicum*, *Ipecacuanha* will be most suitable; or sometimes if worse the next morning, *Nux vomica*.

Bryonia or *Apis* are of great benefit after *Ipecacuanha*, particularly when exercise aggravates the disease, and when it arises from suppressed or tardy eruptions; *Bryonia*, when the patient sighs often or is cold; the paroxysms come on at night, and are attended by pain in the bowels, with inclination to evacuate. *Apis*, if the neck feels as if it were compressed; the region about the short ribs as if crushed; more on the left side; if the warm room is unbearable on account of the heat and headache.

Nux vomica and *Lachesis* are often beneficial when the patient is forced to sit stooping forward. *Nux vomica*, when preceded by great mental exertion or drinking wine, brandy or coffee, or by sedentary habits in very energetic, violent persons; when, too, the warmth of the stove is agreeable and relieves. *Lachesis* for discontented, gloomy persons, but who are easily excited, particularly if worse after sleep.

Belladonna is most suitable when the attacks are made worse by motion, and the patient is, notwithstanding, unable to rest; the paroxysms are worse by spells; the respiration at times deep and full, at others quick and hurried, accompanied by a dry cough and fulness of the chest.

Arnica is indicated when not only exercise, but even speaking or blowing the nose aggravates the symptoms; the respiration is labored and oppressed, with shooting pains in the chest.

Cepa, if children suddenly awake in the night with a suffocating cough; particularly if they have been in the open air during damp weather. *Euphrasia* under similar circumstances. See what was said of these two remedies under "Cough." If the chest feels as if laced together, with anguish or much sighing, and if the constriction alternates with headache, give *Glonovine*.

Cinchona, when there is whistling and wheezing in the chest; the phlegm in the chest threatens to suffocate the patient. If the attack begins on awaking at night; there is inability to breathe, unless when lying with the head very high; the patient perspires easily, and is liable to take cold. *Sambucus* in similar cases with sweat of the throat, particularly in children.

Coffea, in very sensitive persons, who are liable to attacks of asthma in consequence of mental emotions; when inspiration is labored and consists only of short jerks, with agitation, uneasiness, heat, and sweat. If this does not give relief in attacks of this kind, it may be followed by *Aconite*. *Pulsatilla*, too, at a later period, may be of service for timid, lachrymose patients; and *Nux vomica* for those of a passionate, fretful temper. If mortification or suppressed vexation is the cause, *Ignatia*; if violent vexation and anger, or quarreling, *Chamomilla* or *Staphisagria* will be probably be indicated.

Chamomilla is also serviceable when there is frequent inclination to cough, without actual coughing, with great pressure about the chest and heart, or when the patient cannot perspire.

Pulsatilla, especially in women or persons of mild character and the attack is attended with giddiness and weakness in the head, drowsiness, palpitation of the heart, heat in the chest; the breath seems to be impeded in the lower part of the chest.

Rhus, when there is very violent laboring of the whole chest, even in the agony of death it sometimes relieves.

Sulphur. Short wheezing, obstructed respiration with anxiety and fear of suffocation; the attacks come on when lying down at night, or during sleep; feeling as if the chest were constricted; with sensation as of dust in the lungs.

Veratrum is often suitable after *Ipecacuanha*, *Arsenicum*, *Cinchona* or *Arnica*; particularly when the patient is almost

suffocating. Also, if worse on sitting up, and when in motion, with pain in the side, a hollow cough at times; when a cold sweat breaks out, or when the face and limbs become cold; particularly when partial relief is obtained by lying quiet.

After suppressed discharges of any kind, ulcers which have been healed up or eruptions suppressed, asthma is very apt to follow, then give according to symptoms, *Pulsatilla*, *Ipecacuanha* or *Veratrum*, afterwards *Sulphur*, *Arsenicum* and others. These must be chosen by previous or present symptoms, or better still, consult a good homœopathic physician.

PLEURISY, STITCH IN THE SIDE AND INFLAMMATION OF THE LUNGS.

A complete description, scientific names, etc., of these different complaints would be entirely out of place in a domestic work like the present. Here plain descriptions will be given, without any learned terms, so that anyone can understand them and know which cases are really dangerous. All severe cases must be treated by a homœopathic physician.

The chief symptoms, which distinguish these cases from asthma, are: the great difficulty of breathing and the fever which is present, or the pain. In inflammatory diseases of the chest there is always cough, generally with no expectoration or only a little thin mucus, sometimes mixed with blood, or frothy and brownish.

Very severe stitches when breathing are not always a sign of pleurisy; if they are not accompanied by coughing or at least not by much, if they did not commence with a heavy chill, it is only *false pleurisy or stitch in the side*. It commences usually with rheumatic pains about the throat, neck and shoulders. If the pain shifts its place, if the chest is painful to the touch, and if the passing of your finger along the chest between the ribs causes pain, it is **FALSE PLEURISY** and not inflammation.

Such cases are almost always cured by *Arnica*; if that does no good, take *Bryonia* or *Nux vomica*, and see "Rheumatism."

The pains are sometimes lower down, there is difficulty of breathing, more so in expiration than on inspiring, in real pleurisy it is just the contrary. Give *Pulsatilla*, *Arnica*, or other remedies for rheumatism.

If one has rheumatic pains and there suddenly appears

the sensation as of a heavy load on the chest with great anxiety; if the heart beats violently and very fast; if the breathing becomes constantly more difficult; if coughing is quite impossible; if the limbs, from which the pains have disappeared, are getting cold—there is very great danger. Some cases of this kind have been cured by *Aconite*, and after it no longer improved, *Pulsatilla* or *Sulphur*.

PLEURISY is known by the chills with which it commences, by the fever and cough; the breath is hot; the pulse hard, that is, it beats harder against the finger of a person feeling it, than that of a healthy person, and is not so easily compressed; breathing is impeded by a stitch, commonly under the ribs of one side, and the patient likes to lie on this side; coughing is very painful, but not frequent; the expectoration is slight; the face pale; the patient would like to talk, but is prevented by the pain; towards morning the symptoms lessen, and the skin may become moist.

Pleurisy is generally not very dangerous, but the consequences are sometimes serious, particularly the effusion of fluid into the chest which may occur from a pleuritic attack.

Aconite is the chief remedy and in most instances it is sufficient to effect a complete cure. The medicine should be continued until the pain, heat, thirst and cough have sensibly diminished.

Bryonia is indicated by the following symptoms: acute shooting pains in the chest increased by inspiration or movement of the body; dry cough, or cough followed by expectoration of yellowish, dirty or bloody mucus; oppressed respiration; yellowish tongue; palpitation of the heart; constipation; bitter taste, nausea and sometimes vomiting of mucus; aching in the limbs; hot skin, violent thirst, cough when lying on the right side.

Sulphur when *Bryonia* has removed the pain, if there is still some sensitiveness remaining, particularly on motion and exposure to the air.

Although these three remedies will, in a great majority of cases, be sufficient to effect a cure, yet it will, in some instances, be necessary to resort to one or more of the following:

Belladonna, if the fever returns, or the pain and difficulty of breathing continue, and in those cases in which there is violent pain in the head, with great heat, incoherent talking, etc.

Arnica, against pleurisy resulting from external injury; also in cases in which the fever has been subdued by *Aconite*, but there is still pain and difficulty of breathing remaining.

Mercurius, when the fever has diminished, but there is still a good deal of pain and difficulty of breathing remaining.

Arsenicum, in protracted cases, when there is extreme prostration of strength, and the breathing painfully oppressed.

Cinchona, in those cases in which bleeding has been resorted to, and the patient is very weak and debilitated. It may be followed by *Ferrum*.

Lycopodium, *Arsenicum* and *Phosphorus* are chiefly to be relied on in chronic cases, when, through neglect, bad management, or constitutional predisposition, there is danger of consumption, with purulent expectoration, protracted cough, dropsical swelling, etc.

INFLAMMATION OF THE LUNGS. **PNEUMONIA** is much more dangerous than pleurisy. It usually begins with a severe chill; the fever does not, to so marked a degree, decrease towards morning; the skin is always hot and dry; pulse at first soft, afterwards it becomes hard; the breath is hot, but the breathing, though not so much impeded by stitches as in pleurisy, is much more rapid and remains so throughout the attack; the pains are more pressing in the middle of the chest; coughing more frequent, of longer duration, and often causes headache; the face is usually deeply flushed, especially on the side corresponding to the affected lung; the patient lies upon the back, not upon the side; wants to be let alone and does not like to talk; sometimes he is cross and don't care for anything. The cough is usually dry at first, afterwards a little blood is brought up, mixed with tough mucus, and looking the color of iron rust.

The danger is mostly over as soon as the expectoration becomes copious and thick, with frequent coughing, the pressure upon the chest decreases and sweating occurs, the skin remaining moist.

Aconite, in the beginning, for hot, burning skin, hard, full and frequent pulse, rapid breathing, violent thirst; great anxiety, either accompanied or not by pain in the chest; dry cough.

Bryonia, after *Aconite*, for the following symptoms: cough, with expectoration of tough mucus of a reddish or rusty color; great difficulty of breathing, and stitches in the side or chest; pain increased by movement; mouth dry, yellowish or dark coated tongue, great thirst and constipation.

Hyoscyamus sometimes, when the brain symptoms predominate.

Mercurius, when the fever is not so active; the pain and difficulty of breathing still continue, with profuse sweats, which do not relieve the symptoms, the pulse weak and frequent. If perspiration breaks out on the chest of old people, *Mercurius* is indicated.

Antimonium tartaricum, when there is oppression of the chest, with much rattling of mucus; expectoration of frothy mucus; great weakness, and disposition to vomit or vomiting of mucus; face livid. Especially suitable for old people and infants.

Sulphur is the most important remedy and following *Aconite*, is frequently sufficient to complete the cure; its chief indications are: frequent, weak, faint spells; flushes of heat; feels suffocated; constant heat on top of head; rattling of mucus in the chest; cough; when the disease, after other remedies have been given, remains stationary, *Sulphur* will nearly always bring about a recovery or make such a change in the condition of the patient, that another medicine will finish the cure.

If the inflammation of the lungs has not decidedly developed, if the cough remains painful, if the breath is crackling and like sawing, the beating of the heart constantly accelerated, give *Phosphorus*; if a yellow pus-like expectoration remains, strength fails and night-

sweats set in, the patient will only be saved by *Lycopodium*; when the expectoration is copious and slimy, *Dulcamara* may be given. But such cases should always be treated by a homœopathic physician.

Occasionally the disease takes on, especially in old or very feeble persons, or in those who are intemperate in the use of alcoholic liquors, a form known as typhoid pneumonia. Delirium or stupor are present and prostration of the vital powers occurs; the tongue is dry and brown, teeth covered with sordes; involuntary passages from the bowels occur and twitchings of the muscles take place. The medicines most frequently indicated are: *Arsenicum*, *Lycopodium* and *Rhus*.

Arsenicum, when there is great prostration with anxious restlessness; much thirst, but drinking only a little at a time; face pale and anxious; diarrhœa.

Lycopodium, cough loose, or a constant tickling cough; circumscribed redness of face; sweat without any relief; patient is always worse late in the afternoon.

Rhus, extreme restlessness; tearing cough; tongue red at tip; prostration; great drowsiness; hardness of hearing; involuntary movements from bowels and urination; skin dry and hot.

CONSUMPTION OF THE LUNGS.

This disease, one of the most common and most fatal, may be treated in the beginning according to the symptoms that arise; for those regarding the chest, see "Cough" and "Hemorrhage from the Lungs." Very many cases can be cured if treated early by proper medical, hygienic and dietetic methods, hence a physician should always be consulted for any person who with a cough more or less severe begins to lose flesh, or to have night-sweats.

CHAPTER VI.

AFFECTIONS OF THE THROAT.

SORE THROAT, INCLUDING QUINSY.

The various affections producing a troublesome pain in the throat pass under the general name of *sore throat*. In order to examine the throat, place the patient in the light near a high window, if possible; let him open his mouth wide and push his tongue forward, while you introduce the handle of a spoon and press down the back part of the tongue, but not with too much violence; by this means the entire cavity of the throat may be examined. Persons not familiar with this simple procedure, and who, of course, must needs take a longer time in the examination, should first let the patient open his mouth, hold back his head and put out his tongue, that they may examine the upper part of the throat. Then let him rest awhile, after which let the mouth be opened wide a second time so that a spoon handle may be introduced, and the back of the tongue pressed down gently, in order that the soft palate with the tonsils and the interior of the throat may be exposed to view. The use of the spoon to press down the tongue may often be avoided by directing the patient to open his mouth wide and draw in his breath forcibly, the tongue then generally goes down and the soft palate up during the inspiration, or if the patient can be made to say, *ah!* with the mouth wide open, the throat may be seen to more advantage. In children, who will usually resist this examination, it is sometimes necessary to put a cork between the teeth; care, however, should be taken that, in pressing down the tongue, no injury is done.

Then compare the symptoms as given by the patient, and your own observations, with the symptoms of the medicines recommended. In cases complicated with hoarseness, look under that section.

When on looking into the throat white or gray patches of membrane, which lie on the more or less greatly swelled and reddened mucous membrane, lining the throat and covering the tonsils, are seen, the disease is diphtheria and it is the most dangerous form of sore throat. For the treatment, see DIPHTHERIA, Chapter ~~XXX~~ *XXV*.

An excellent domestic remedy for sore throat when it first comes on, and one that is instantly available, is to put two or three thicknesses of linen cloth, which has been dipped in cold water, around the neck, and over this a roll of flannel or a long worsted stocking. The patient should at once go to bed after this is applied and often he will be surprised and delighted to find that his sore throat is gone by the morning.

Men who suffer frequently from sore throat should allow their beards to grow beneath the chin. Putting a woollen stocking around the neck at

night on going to bed is also good. It is a good plan to wash the neck every morning with cold water, and afterwards to rub it well and not to make a practice of covering the neck too warmly on going out into the cold.

Gargling the throat with irritating substances, is an old and pernicious practice. When the throat is dry, swollen and very painful, the patient may inhale the vapor of hot milk by holding his mouth over a jug half filled with it. When the throat is dry and swollen and the disease acute, it is well to boil figs in milk and inhale the vapor, or hold pieces of the fig in the mouth or drink some of the milk. If the complaint is tedious and swallowing difficult, boil wheat starch in water and use in the same way.

Aconite is to be given when the patient has difficulty and pain in swallowing or in speaking; when the throat is much more red than usual; and for a burning pricking, or contracting sensation, accompanied by fever, anxiety, impatience and uneasiness.

Belladonna, when drinking produces spasm in the throat, the fluids returning through the nose; constant disposition to swallow; pricking pain on swallowing and on touching the throat; swallowing difficult, producing spasm, or entirely impossible; the throat feels as if there were a plug in it; dry, burning sensation in the throat, and a disposition to hawk up something; when not swallowing, tearing pain, extending to the lower jaws, or up into the head; ulcers in the throat, which appear very suddenly and spread rapidly, tonsils and the small palate (uvula) swollen, and of a bright or yellowish-red color, or redness without swelling; violent pains when swallowing and hawking, sometimes even when speaking; pressing, shooting pain in the tonsils, which seem as if they would burst, the glands swollen outside, accompanied by violent fever, red face, throbbing headache and much thirst; profuse salivation, pain in the forehead, and furred tongue. During the prevalence of scarlet fever, *Belladonna* is most suitable for sore throat.

Mercurius, if it seems as though a hot vapor were rising in the throat, the tongue is furred and flabby with depressed edges, so that the impression of every tooth may

be seen; and in cases similar to *Belladonna*, when the latter is insufficient, and the throat continues swollen, very red, or becomes ulcerated. When the ulcers are not painful, and appear gradually, *Belladonna* is of no use, but *Mercurius* must be given; after *Belladonna* or *Mercurius* the patient ought particularly to avoid taking cold. In quinsy this medicine is often of use when it is found impossible to prevent the formation of pus, to hasten such formation.

Hepar, in the beginning, especially in quinsy, is more suitable than the preceding remedy, if the pricking pains are very violent when swallowing, extending to the ears or to the glands of the throat, and to the lower jaw; if the patient feels as if a splinter or a fish-bone were in the throat; when the burning in the throat scarcely allows the patient to swallow, with stitches in the swollen tonsils, and a very disagreeable taste in the mouth, the gums and back part of the tongue swollen, with abundant discharge of saliva; in the evening, chills or heat, followed by perspiration, which does not relieve; uneasiness, or an aggravation of all the symptoms during the night; also worse in the cold air; accompanied by violent headache and drawing in the nape of the neck. *Hepar* may be given after *Mercurius*, particularly after taking fresh cold; after *Hepar*, *Mercurius* may be given again if there is no improvement.

Lachesis may be given, when *Belladonna*, *Mercurius* or *Hepar* have appeared to be indicated, but do not suffice; if the uvula is swollen; continual disposition to swallow; profuse salivation; accumulation of phlegm in the throat; bad ulcers; spasms of the throat which prevent drinking; the throat is very sensitive to the slightest touch, even to that of the bed clothes. It is especially indicated when there are white or gray patches on the tonsils or throat, particularly when the disease began on the left side; when croupy symptoms appear; the symptoms are worse in the

afternoon, sometimes in the morning, but always after sleeping.

Ignatia, when there is a constant feeling as if there were a lump in the throat; a sore spot in the throat when swallowing; acute, shooting pain, which sometimes is experienced only when the patient is not swallowing. Fluids are more difficult to swallow than solid food. The same remedy answers when the tonsils are swollen and ulcerated. Before, however, deciding on this medicine, compare what is said under *Belladonna*, *Mercurius*, *Hepar* and *Sulphur*. For shallow ulcers on the tonsils, give *Ignatia*, and afterwards *Lycopodium*.

Nux vomica, in cases similar to those mentioned under *Ignatia*; especially for a sensation as if there were a swelling like a plug or lump in the throat, particularly when swallowing; with pains rather pressing than shooting, worse on swallowing the saliva. The throat feels raw and excoriated, or as if scraped and rough; the cold air affects the throat painfully; sometimes the uvula is swollen and red.

Pulsatilla for the same sensation on swallowing as described under *Nux vomica*, or the throat appears too narrow, as if obstructed by swelling; redness and sensation of scraping; dryness of the throat without thirst; shooting pains in the throat when swallowing, but worse when not swallowing; a feeling of tension in the throat; the glands of the neck are painful when touched; the interior of the throat is more of a bluish-red; the fever is unaccompanied by thirst; chilliness in the evening, followed by heat.

Bryonia, when the throat is painful on being touched, or on turning the head; swallowing difficult and painful, as if a hard substance were in the throat; shooting pains and soreness, attended with dryness, or a feeling of dryness, which renders speaking difficult. These symptoms commonly occur after being overheated, or after eating ice or drinking ice-water; they are frequently accompanied by

fever, dry mouth, either with or without thirst, and great irritability.

Rhus for symptoms similar to those under *Bryonia*, except that the pains extend further down. The glands under the ears are much swollen; the patient is extremely restless; a bloody saliva runs out of the mouth during sleep.

Capsicum for symptoms similar to those previously mentioned; it may be given when the other remedies fail; when the fever continues with chills and thirst, followed by heat; the pains are pressing, the throat spasmodically contracted; blisters in the mouth and ulcers in the throat, with a sensation of burning; at the same time cough, with violent pain in the throat. It is particularly indicated when the patient wants to lie down all the time, and is disposed to sleep; is afraid of the air and cold.

Apis, if the patient is always chilly and afraid of the open air, yet cannot bear a closed room, particularly not when heated; if he is hot, but not thirsty; if he has had nettle-rash; if the tongue and throat are as if scalded; burning blisters on the margin of the tongue; dryness of the mouth and throat, stinging when swallowing; tough secretion from the mouth; tonsils bright red and swollen with stinging, burning, itching pains; the throat is raw; looks dropsical.

Sulphur for frequent or constant sore throat, particularly when the inside of the throat, the tonsils and the small palate (uvula) are swollen; swallowing is impeded, and besides the usual pains, peculiar pricking pains, or a sensation as if there was a lump in the throat, or the throat was too narrow, with soreness or dryness. If there is swelling and redness of the soft palate, give *Phosphorus*; if the uvula chiefly or alone is swollen and red, give *Lachesis*.

If the sore throat is not better in two or three days and the throat gradually appears to close up, the pain being throbbing and stinging; saliva flowing from the mouth,

and when trying to swallow fluids, they come out again at the nose; lying on the painful side or on the back becomes more difficult, when you see the red swollen tonsils at the side of the uvula protruding more on one side than on the other, it is probable that suppuration threatens. In this case *Silicea* will often be beneficial; sometimes, however, according to the other symptoms, it will be better to give *Hepar*, *Mercurius* or *Lachesis*. Relief may also be obtained from warm poultices, rinsing with warm milk or gruel, or inhaling the warm vapors thereof. As soon as the abscess breaks the patient will be better.

CHAPTER VII.

AFFECTIONS OF THE TEETH.

TOOTHACHE AND SWELLED FACE.

Pains, originating in the teeth, sometimes affect different parts of the head, as the lower jaw, the ear, the upper jaw, and the bones of the face; and pains which originate in these parts extend likewise to the teeth. We append, therefore, "Face-ache" and "Swelled Face" to this chapter. This connection between the different parts of the head shows that the cause of the complaint should not always be looked for in carious teeth. Decayed teeth are sometimes painful, because they are affected by disease, but their being decayed teeth does not necessarily produce pain; they may decay and break off altogether without any pain whatever; if pain were occasioned by decay, the tooth would ache continually, while, on the other hand, teeth that are not decayed may pain most violently. What is said of exposed nerves producing pain is nonsense; any one who knows what a nerve is, and will take the trouble to reflect, will soon be convinced of it. Extraction of teeth is only allowable where there exists a fistula, suppuration at the root, and the like, and as most of these can be cured by homœopathic remedies, together with the services of a good dentist, it can only be necessary in the few incurable cases, and in children who are shedding their teeth; in all other cases it is a bad remedy, because the root has to be ex-

tracted, and this is injurious to the jaw, as the root may remain in it without causing the least pain, when we know how to treat it. When the teeth remain in the jaw, the decay communicates itself but very slowly, except in a few diseases where the decay in a short time destroys all or most of the teeth. But when the disease is of this nature, extracting does no good, not even if all the teeth are taken out, for in this case it will attack the jaw. Let no one believe that one tooth can affect another, make it black, and communicate the caries by contact. This is the doctrine of those who get paid for extracting them, but who cannot cure toothache.

Most of the tooth powders and tinctures sold by perfumers and chemists are injurious. The teeth and gums ought not to be picked much, and never with any toothpick, except quill or wood; one must be careful in drinking to avoid extremes of hot and cold, and keep the teeth clean by brushing them with a soft brush and pure water in the morning and after each meal. Do not be content with brushing simply the front part of the teeth, but go over their crowns and inner faces, and when using the brush on their front surfaces let the motion of the toothbrush be up and down, and not across the surface of the teeth from side to side. If a tooth powder must be used, sugar of milk is the best one.

The most pleasant way of cleaning the teeth and removing even the tartar is with sour milk. Rub the teeth with it, and then rinse the mouth with warm water, and you will feel how clean the teeth have become.

If you have toothache, make a timely selection of one of the following remedies, and in most cases you will find that they give speedy relief.

The worst of all the common remedies is opium or laudanum. It is always injurious. Pain which has been removed by opium is sure to return with redoubled violence some time or other. But it is very seldom the true remedy, and when it is, the best way to use it is to tie a piece of opium of the size of a pea on the outside of the cheek. Kreosote is equally injurious; in many cases it is of no use; in most cases it only allays the pain for awhile, and produces ulcers in the mouth, the throat and the stomach; the mere introduction of it into the mouth affects the stomach. For persons with weak lungs it is very injurious.

When the toothache evidently depends on the presence of particles of food in the cavity of a decayed tooth, the cavity may be cleaned out by a little cotton wound on the end of a piece of wire or the end of a knitting needle. This will often stop the pain at once.

The earlier the cavities are filled by a dentist the better, and in the case of children, if the care of their teeth is early put into the hands of a competent dentist, there need be but little trouble from decayed teeth or toothache; for timely attention would save most of the disastrous loss of teeth and the terrible suffering consequent on the decay of the teeth.

Persons who suffer much from toothache should abstain from the use of coffee altogether; it is generally injurious to the teeth. When homœopathic remedies are used, care should be taken for a long time to avoid everything that would interfere with their operation.

It ought to be observed, that one or two globules taken on the tongue, if it is the proper remedy, or, in some cases, merely smelling the medicine, will give the patient relief. The pain frequently gets worse for a short time after taking the medicine, but wait awhile patiently, and if it begins to abate take nothing more, until there is no longer any improvement. If it gets worse again, and the symptoms resemble the first, take the same medicine; if they differ, select another.

As the torture from toothache is so common, and embitters life so much, and as medicines not suitably chosen will prove ineffectual, we will endeavor, as much as possible, to facilitate the selection of the proper remedy, by showing the twofold manner in which it must be found: namely, first, by comparing the symptoms with the medicines adapted to them, and then by comparing the medicines with their respective symptoms.

In the first place, take note of every symptom complained of by the patient, and note also the remedies which are recommended for each; then examine the symptoms under those medicines which occur most frequently on your list, and see whether they also correspond with the proper symptoms: by this means the proper remedy may generally be easily discovered.

It should be taken into consideration that not all the symptoms mentioned under a remedy are necessarily to be found in the patient, but that all, or at least the greater part of the symptoms of the patient must be found under the remedy selected.

To explain this, we will give the following example:—A patient has violent tearing or drawing pains in different places, and tearing in the gums (*a*); sometimes tearing pain extending into the head (*b*); cold air causes it and makes it worse (*c*); it is mostly worse in the morning (*d*); accompanied by determination of blood to the head (*e*).

Among the different symptoms, we find for—

a) Pains in the gums: Mercurius, Pulsatilla, Staphisagria, Hepar, Arsenicum, Carbo vegetabilis, Hyoscyamus, Calcareæ.

b) Which extend to the head: Mercurius, Staphisagria, Nux vomica, Chamomilla, Sulphur, Arsenicum, Antimonium crudum, Rhus, Hyoscyamus.

c) Worse in cold air: Belladonna, Mercurius, Staphisagria, Sulphur, Hyoscyamus.

d) Worse in the morning: Ignatia, Mercurius, Pulsatilla, Phosphoric acid, Staphisagria, Bryonia, Nux vomica, Cinchona, Sulphur, Arsenicum, Hyoscyamus.

e) Determination of blood to the head: Aconite, Pulsatilla, Cinchona, Hyoscyamus, Calcareæ.

After striking out all the remedies that occur here only once or twice you will find that Pulsatilla, Staphisagria, Sulphur, Arsenicum, occur three times, Mercurius, four times, Hyoscyamus, five times; now, examine the symp-

toms under *Hyoscyamus*, and you will find that *Hyoscyamus* or *Mercurius* answers best.

The remedies in italics are more frequently indicated than the others and are therefore of more importance.

Most in the Front-teeth.—*Belladonna*, *Causticum*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Coffea*, *Ignatia*, *Mercurius*, *Natrum muriaticum*, *Nux moschata*, *Nux vomica*, *Phosphorus*, *Phosphoric acid*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

Most in the Eye and Stomach-teeth.—*Aconite*, *Calcareo*, *Hyoscyamus*, *Rhus*, *Staphisagria*.

Most in the Molars or Back-teeth.—*Arnica*, *Belladonna*, *Bryonia*, *Calcareo*, *Carbo vegetabilis*, *Causticum*, *Chamomilla*, *Cinchona*, *Coffea*, *Hyoscyamus*, *Ignatia*, *Mercurius*, *Nux moschata*, *Nux vomica*, *Phosphorus*, *Phosphoric acid*, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

Most in the Upper-teeth.—*Belladonna*, *Bryonia*, *Calcareo*, *Carbo vegetabilis*, *Cinchona*, *Natrum muriaticum*, *Phosphorus*.

Most in the Lower-teeth.—*Arnica*, *Belladonna*, *Bryonia*, *Carbo vegetabilis*, *Causticum*, *Chamomilla*, *Cinchona*, *Hyoscyamus*, *Ignatia*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*.

One-sided.—*Aconite*, *Belladonna*, *Chamomilla*, *Mercurius*, *Nux vomica*, *Pulsatilla*.

On the Left side.—*Aconite*, *Apis*, *Arnica*, *Carbo vegetabilis*, *Causticum*, *Chamomilla*, *Cinchona*, *Hyoscyamus*, *Mercurius*, *Nux moschata*, *Phosphorus*, *Rhus*, *Silicea*, *Sulphur*.

On the Right-side.—*Belladonna*, *Bryonia*, *Calcareo*, *Coffea*, *Lachesis*, *Natrum muriaticum*, *Nux vomica*, *Phosphoric acid*, *Staphisagria*.

A whole Row of Teeth.—*Chamomilla*, *Mercurius*, *Rhus*, *Staphisagria*.

In Decayed Teeth.—*Antimonium crudum*, *Belladonna*, *Bryonia*, *Calcareo*, *Carbo vegetabilis*, *Causticum*, *Chamomilla*, *Cinchona*, *Coffea*, *Hepar*, *Hyoscyamus*, *Lachesis*, *Mercurius*, *Nux moschata*, *Nux vomica*, *Phosphorus*, *Phosphoric acid*, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

In the Gums.—*Antimonium crudum*, *Arnica*, *Belladonna*, *Bryonia*, *Calcareo*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Hepar*, *Hyoscyamus*, *Lachesis*, *Mercurius*, *Natrum muriaticum*, *Nux moschata*, *Nux vomica*, *Phosphorus*, *Phosphoric acid*, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

—— **Upper.**—*Belladonna*, *Calcareo*, *Natrum muriaticum*.

—— **Lower.**—*Causticum*, *Phosphorus*, *Staphisagria*, *Sulphur*.

—— **Interior of.**—*Arnica*, *Natrum muriaticum*, *Phosphoric acid*, *Pulsatilla*, *Rhus*, *Staphisagria*,

- Gums Swollen.**—Aconite, Belladonna, Calcareo, Chamomilla, Carbo vegetabilis, Causticum, Cinchona, Hepar, Lachesis, Natrum muriaticum, Nux vomica, Phosphorus, Pulsatilla, Rhus, Sulphur.
- **Painful.**—Apis, Arsenicum, Calcareo, Carbo vegetabilis, Causticum, Lachesis, Mercurius, Nux moschata, Nux vomica, Phosphorus, Staphisagria, Sulphur.
- **Bleeding.**—Belladonna, Calcareo, Carbo vegetabilis, Causticum, Lachesis, Mercurius, Nux moschata, Nux vomica, Phosphorus, Staphisagria, Sulphur.
- **Ulcerated.**—Belladonna, Calcareo, Carbo vegetabilis, Causticum, Hepar, Lachesis, Mercurius, Natrum muriaticum, Nux vomica, Phosphorus, Staphisagria, Silicea.
- Pressing.**—Aconite, Arnica, Bryonia, Carbo vegetabilis, Causticum, Cinchona, Hyoscyamus, Ignatia, Natrum muriaticum, Nux moschata, Nux vomica, Phosphorus, *Rhus*, Silicea, *Staphisagria*, Sulphur.
- **Inwards.**—Rhus, Staphisagria.
- **Outward.**—Phosphorus.
- **Asunder.**—Phosphoric acid.
- **As if from Congestion of blood, as if the teeth were too close.**—Aconite, Arnica, Belladonna, Chamomilla, Calcareo, Cinchona, *Coffea*, Hepar, Hyoscyamus, *Nux vomica*, *Pulsatilla*.
- As if Pulled, lifted out or wrenched.**—Arnica, Causticum, Nux moschata, Nux vomica, Phosphoric acid, Rhus.
- Too Long.**—Arnica, Arsenicum, Belladonna, *Bryonia*, Calcareo, Carbo vegetabilis, *Causticum*, Chamomilla, Hyoscyamus, Lachesis, Natrum muriaticum, Nux vomica, Rhus, Silicea, *Sulphur*.
- Loose.**—Arnica, Arsenicum, Bryonia, Carbo vegetabilis, Causticum, Chamomilla, Cinchona, Hepar, *Hyoscyamus*, Ignatia, Mercurius, Natrum muriaticum, Nux moschata, Nux vomica, Phosphorus, Pulsatilla, Rhus, Staphisagria, Sulphur.
- As if too Loose.**—Arsenicum, Bryonia, *Hyoscyamus*, Mercurius, Rhus.
- Blunt or without feeling.**—Aconite, Cinchona, Dulcamara, Ignatia, Lachesis, Mercurius, Natrum muriaticum, *Nux moschata*, Phosphorus, Phosphoric acid, *Pulsatilla*, Silicea, Staphisagria, Sulphur.
- As if Bruised, Ulcerated.**—Arnica, Arsenicum, Belladonna, Bryonia, Calcareo, Carbo vegetabilis, Causticum, *Ignatia*, Natrum muriaticum, Nux vomica, Phosphorus, *Pulsatilla*, *Rhus*.
- Burning.**—Chamomilla, Mercurius, Natrum muriaticum, Nux vomica, Phosphorus, Pulsatilla, Rhus, Silicea, Sulphur.
- Gnawing, Scraping, Scratching on the Nerves.**—Chamomilla, Nux vomica, Rhus, Staphisagria.
- Digging.**—Antimonium crudum, Bryonia, Calcareo, Cinchona, Ignatia.
- Boring.**—Belladonna, Calcareo, Lachesis, Mercurius, Natrum muriaticum, Phosphorus, Phosphoric acid, Nux vomica, *Silicea*, *Sulphur*.
- Jerking, Twitching.**—Apis, Antimonium crudum, Arsenicum, Bryonia,

Belladonna, Calcareo, Causticum, Cepa, Chamomilla, Coffea, Hepar, Hyoscyamus, Lachesis, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*.

Drawing, Tearing.—Antimonium crudum, Belladonna, Bryonia, Carbo vegetabilis, Calcareo, Cepa, Chamomilla, Cinchona, Glonoine, Hyoscyamus, Lachesis, *Mercurius*, *Nux vomica*, Phosphoric acid, *Rhus*, *Staphisagria*.

Piercing.—Aconite, Antimonium crudum, Belladonna, *Bryonia*, Calcareo, Causticum, *Chamomilla*, *Cinchona*, Lachesis, *Mercurius*, *Nux vomica*, *Nux moschata*, Phosphorus, Phosphoric acid, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*.

Beating, Pulsating.—*Aconite*, Arnica, Arsenicum, *Belladonna*, Calcareo, Causticum, *Chamomilla*, *Cinchona*, Coffea, Glonoine, *Hyoscyamus*, Lachesis, *Mercurius*, Natrum muriaticum, Phosphorus, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

Intermittent.—Belladonna, Bryonia, Chamomilla, Coffea, Calcareo, Cinchona, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

Constant, day and night.—Belladonna, Calcareo, Causticum, Natrum muriaticum, *Silicea*, *Sulphur*.

During the day only, better in the night.—*Mercurius*.

———, **none in the night.**—Belladonna, Calcareo, *Mercurius*, *Nux vomica*.

———, **worse in bed.**—Antimonium crudum, *Mercurius*.

Worse in the night.—Aconitum, Antimonium crudum, Arsenicum, *Belladonna*, Bryonia, *Carbo vegetabilis*, *Chamomilla*, Cinchona, Coffea, Hepar, Hyoscyamus, *Mercurius*, Natrum muriaticum, *Nux moschata*, *Nux vomica*, Phosphorus, Phosphoric acid, *Pulsatilla*, *Rhus*, *Silicea*, *Staphisagria*, *Sulphur*.

By night only, not during the day.—*Belladonna*, Phosphorus.

Most before midnight.—Bryonia, Chamomilla, Cinchona, Natrum muriaticum, *Rhus*, *Sulphur*.

——— **after** ———.—Arsenicum, Belladonna, Bryonia, Carbo vegetabilis, Chamomilla, Cinchona, *Mercurius*, Natrum muriaticum, Phosphoric acid, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

When awaking.—Belladonna, Carbo vegetabilis, Lachesis, *Nux vomica*.—See Sleep.

In the morning.—Arsenicum, Belladonna, Bryonia, Causticum, Carbo vegetabilis, Cinchona, *Hyoscyamus*, Ignatia, Natrum muriaticum, *Nux vomica*, Phosphorus, Phosphoric acid, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

——— **forenoon.**—Carbo vegetabilis, Causticum, Natrum muriaticum, *Nux vomica*, *Staphisagria*, *Pulsatilla*, *Sulphur*.

At noon.—Cocculus, *Rhus*.

Afternoon.—Calcareo, Causticum, *Mercurius*, *Nux vomica*, Phosphorus, *Pulsatilla*, *Sulphur*.

Towards evening.—Pulsatilla.

At night.—Antimonium crudum, *Belladonna*, Bryonia, Calcareo, Causticum, Hepar, *Hyoscyamus*, Ignatia, *Mercurius*, Nux moschata, Nux vomica, *Phosphorus*, *Pulsatilla*, *Rhus*, Staphisagria, Sulphur.

Every other day.—Chamomilla, Natrum muriaticum.

Every seventh day.—Arsenicum, *Phosphorus*, Sulphur.

In Spring.—Aconitum, *Belladonna*, Bryonia, Calcareo, Carbo vegetabilis, Dulcamara, Lachesis, Natrum muriaticum, Nux vomica, *Pulsatilla*, *Rhus*, Silicea, Sulphur.

In Summer.—Antimonium crudum, *Belladonna*, Bryonia, Calcareo, Carbo vegetabilis, Chamomilla, Lachesis, Natrum muriaticum, Nux vomica, *Pulsatilla*.

In Autumn.—Bryonia, Cinchona, *Mercurius*, Nux vomica, Nux moschata, *Rhus*.

In Winter.—Aconitum, Arsenicum, *Belladonna*, Bryonia, Calcareo, Carbo vegetabilis, Causticum, Chamomilla, Dulcamara, Hepar, *Hyoscyamus*, Ignatia, *Mercurius*, Nux moschata, Nux vomica, *Phosphorus*, Phosphoric acid, *Pulsatilla*, *Rhus*, Silicea, Sulphur.

Caused by Damp night-air.—Nux moschata.

—— **Damp air.**—*Mercurius*.

—— **Cold, damp weather.**—Cepa, Nux moschata, *Rhus*.

—— **Keen, cutting wind.**—Aconitum, Silicea.

—— **Wind.**—Aconitum, *Pulsatilla*, *Rhus*, Silicea.

—— **Draught.**—*Belladonna*, Calcareo, Cinchona, Sulphur.

Taking cold.—Aconitum, *Belladonna*, Bryonia, Calcareo, Causticum, Chamomilla, Cinchona, Coffea, Dulcamara, Ignatia, *Hyoscyamus*, *Mercurius*, Nux vomica, Nux moschata, *Phosphorus*, *Pulsatilla*, *Rhus*, Staphisagria, Sulphur.

Taking cold, when overheated.—Glonoino, *Rhus*.

——, **by getting wet.**—*Belladonna*, Calcareo, Causticum, Hepar, Lachesis, Nux moschata, *Phosphorus*, *Pulsatilla*, *Rhus*, Sulphur.

Suppressed Perspiration.—Chamomilla, *Rhus*.

Worse from Cold air.—*Belladonna*, Calcareo, *Hyoscyamus*, *Mercurius*, Nux moschata, Nux vomica, Silicea, Staphisagria, Sulphur.

—— **in the mouth.**—Aconitum, *Belladonna*, Bryonia, Calcareo, Causticum, *Hyoscyamus*, *Mercurius*, Nux moschata, Nux vomica, *Phosphorus*, *Pulsatilla*, Silicea, Staphisagria, Sulphur.

Opening of the Mouth.—Bryonia, Chamomilla, Causticum, Hepar, Nux vomica, *Phosphorus*, *Pulsatilla*.

Breathing.—*Pulsatilla*.

Drawing air into the Mouth.—Antimonium crudum, *Belladonna*, Bryonia, Calcareo, Causticum, Hepar, *Mercurius*, Natrum muriaticum, Nux moschata, *Phosphorus*, Silicea, Staphisagria, Sulphur.

Cold washing.—Antimonium crudum, Bryonia, *Calcareae*, Chamomilla, Mercurius, *Nux moschata*, *Nux vomica*, Pulsatilla, Rhus, Silicea, Staphisagria, Sulphur.

Eating cold things.—Bryonia, *Calcareae*, Chamomilla, *Nux vomica*, Pulsatilla, Rhus, Staphisagria, Sulphur.

Drinking cold things.—Bryonia, *Calcareae*, Chamomilla, Causticum, Hepar, Lachesis, Mercurius, Natrum muriaticum, *Nux moschata*, *Nux vomica*, Pulsatilla, Silicea, Staphisagria, Sulphur.

Rinsing the Mouth with Cold Water.—Sulphur.

Cold in general.—Arsenicum, Antimonium crudum, *Calcareae*, Carbo vegetabilis, Mercurius, Natrum muriaticum, *Nux moschata*, *Nux vomica*, Pulsatilla, Phosphoric acid, Rhus, Silicea, Staphisagria, Sulphur.

In the open air.—Belladonna, *Calcareae*, Causticum, Chamomilla, Cinchona, Hyoscyamus, Mercurius, *Nux moschata*, *Nux vomica*, Phosphorus, Pulsatilla, Rhus, Staphisagria, Sulphur.

—— **Staying.**—Belladonna, Bryonia, Chamomilla, Hyoscyamus, Mercurius, *Nux vomica*, Phosphoric acid, Staphisagria, Sulphur.

—— **Walking.**—*Nux vomica*, Phosphorus, Staphisagria.

In a Room.—Apis, Antimonium crudum, Chamomilla, Hepar, *Nux vomica*, Pulsatilla, Sulphur.

—— **after coming out of the open air.**—Phosphorus.

In a warm Room.—Bryonia, Cepa, Chamomilla, Hepar, *Nux vomica*, Phosphoric acid, Pulsatilla.

Warmth of Stove.—Arsenicum, Pulsatilla.

External warmth.—Bryonia, Chamomilla, Hepar, Mercurius, *Nux moschata*, *Nux vomica*, Phosphorus, Phosphoric acid, Pulsatilla, Rhus, Staphisagria, Sulphur.

Warmth.—Bryonia, *Calcareae*, Carbo vegetabilis, Chamomilla, Coffea, Lachesis, Mercurius, Natrum muriaticum, *Nux vomica*, Phosphoric acid, Pulsatilla, Silicea, Sulphur.

Eating warm things.—Bryonia, *Calcareae*, Chamomilla, *Nux vomica*, Phosphorus, Pulsatilla, Silicea.

Something hot.—Belladonna, *Calcareae*, Phosphoric acid.

Drinking warm things.—Bryonia, Chamomilla, Lachesis, Mercurius, *Nux moschata*, *Nux vomica*, Pulsatilla, Rhus, Silicea.

Warmth of bed.—Belladonna, Bryonia, Chamomilla, Mercurius, *Nux vomica*, Phosphorus, Phosphoric acid, Pulsatilla, Rhus.

Getting warm in bed.—Chamomilla, Mercurius, Phosphoric acid, Phosphorus, Pulsatilla.

Drinking.—Chamomilla, *Calcareae*, Causticum, Lachesis, Mercurius, Pulsatilla, Rhus, Silicea.

—— **Cold or warm.**—Lachesis.

—— **Water.**—Bryonia, *Calcareae*, Carbo vegetabilis, Chamomilla, Mercurius, *Nux vomica*, Pulsatilla, Silicea, Staphisagria, Sulphur.

Drinking Wine.—Aconitum, Ignatia; Nux vomica, for wine drinkers.

—— **Malt liquors.**—Nux vomica, Rhus.

—— **Coffee.**—Belladonna, Carbo vegetabilis, Chamomilla, Cocculus, Ignatia, Mercurius, Nux vomica, Pulsatilla, Rhus.

—— **Tea.**—Cinchona, Coffea, Ignatia, Lachesis.

Smoking tobacco.—Bryonia, Chamomilla, Cinchona, Ignatia, Mercurius, Nux vomica.

Salty things.—Carbo vegetabilis.

Eating.—Antimonium crudum, Arnica, Belladonna, Bryonia, Calcareo, Carbo vegetabilis, Causticum, Chamomilla, Cocculus, Hepar, Hyoscyamus, Lachesis, Mercurius, Nux moschata, Nux vomica, Phosphorus, Phosphoric acid, Pulsatilla, Rhus, Silicea, Staphisagria, Sulphur.

Only while Eating.—Cocculus.

After Eating.—Antimonium crudum, Belladonna, Bryonia, Calcareo, Chamomilla, Cinchona, Coffea, Ignatia, Lachesis, Mercurius, Natrum muriaticum, Nux vomica, Rhus, Staphisagria, Sulphur.

Sometime after eating.—Belladonna.

Chewing.—Arnica, Arsenicum, Belladonna, Bryonia, Carbo vegetabilis, Causticum, Cinchona, Cocculus, Coffea, Hyoscyamus, Ignatia, Mercurius, Natrum muriaticum, Nux vomica, Phosphorus, Phosphoric acid, Pulsatilla, Silicea, Staphisagria, Sulphur.

Only while chewing.—Cinchona.

Swallowing.—Staphisagria.

When moving the mouth.—Causticum Chamomilla, Mercurius, Nux vomica.

Biting.—Arsenicum, Belladonna, Bryonia, Calcareo, Carbo vegetabilis, Causticum, Cinchona, Coffea, Hepar, Hyoscyamus, Lachesis, Mercurius, Nux vomica, Phosphorus, Phosphoric acid, Pulsatilla, Rhus, Silicea, Staphisagria, Sulphur.

—— **something soft.**—Veratrum.

—— **soft food.**—Cocculus.

—— **hard food.**—Mercurius.

Touched by the food (teeth).—Belladonna, Ignatia, Nux vomica, Phosphorus, Staphisagria.

When touched by crumb of bread.—Nux vomica, Staphisagria.

Picking the teeth.—Pulsatilla.

Cleaning the teeth.—Carbo vegetabilis, Lachesis, Phosphoric acid, Staphisagria.

Touching the teeth.—Antimonium crudum, Arnica, Arsenicum, Belladonna, Bryonia, Calcareo, Carbo vegetabilis, Causticum, China, Coffea, Hepar, Ignatia, Mercurius, Natrum muriaticum, Nux moschata, Nux vomica, Phosphorus, Pulsatilla, Rhus, Staphisagria, Sulphur.

—— **with the tongue.**—Carbo vegetabilis, Cinchona, Ignatia, Mercurius, Phosphorus, Rhus.

Touching the teeth, even very softly.—*Belladonna*, *Ignatia*, *Nux vomica*, *Staphisagria*.

Sucking with the tongue.—*Nux vomica*.

Pressing on the teeth.—*Causticum*, *Cinchona*, *Hyoscyamus*, *Natrum muriaticum*, *Staphisagria*, *Sulphur*.

Sucking the Gums.—*Belladonna*, *Carbo vegetabilis*, *Nux moschata*, *Nux vomica*, *Silicea*.

When feeling of the teeth.—*Hepar*.

Rising.—*Ignatia*, *Mercurius*, *Platina*.

From concussion—*Nux moschata*.

Motion.—*Arnica*, *Belladonna*, *Bryonia*, *Cinchona*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Staphisagria*.

Talking.—*Nux moschata*.

Deep breathing.—*Nux vomica*.

When traveling.—*Arsenicum*, *Bryonia*, *Chamomilla*, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

Sitting.—*Antimonium crudum*, *Mercurius*, *Pulsatilla*, *Rhus*.

—— **too much.**—*Aconitum*.

While lying down.—*Arsenicum*, *Belladonna*, *Bryonia*, *Chamomilla*, *Hyoscyamus*, *Ignatia*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

—— **on the painful side.**—*Arsenicum*, *Nux vomica*.

—— **on the painless side.**—*Bryonia*, *Chamomilla*, *Ignatia*, *Pulsatilla*.

—— **in bed.**—*Bryonia*, *Chamomilla*, *Nux vomica*, *Pulsatilla*.

In bed.—*Antimonium crudum*, *Belladonna*, *Bryonia*, *Chamomilla*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Pulsatilla*.

Sleep with yawning—*Staphisagria*.

When going to sleep.—*Antimonium crudum*, *Arsenicum*, *Mercurius*, *Sulphur*.

While asleep.—*Mercurius*.

When awaking.—*Belladonna*, *Bryonia*, *Calcarea*, *Carbo vegetabilis*, *Lachesis*, *Nux vomica*, *Phosphorus*, *Silicea*, *Sulphur*.

Mental emotions.—*Aconitum*.

Vexation.—*Aconitum*, *Chamomilla*, *Rhus*, *Staphisagria*.

Anger.—*Nux vomica*.

Mental exertions.—*Belladonna*, *Ignatia*, *Nux vomica*.

Reading.—*Ignatia*, *Nux vomica*.

Noise.—*Calcarea*.

Being talked to by others.—*Arsenicum*, *Bryonia*.

For women.—*Aconitum*, *Apis*, *Belladonna*, *Calcarea*, *Chamomilla*, *Cinchona*, *Coffea*, *Hyoscyamus*, *Ignatia*, *Nux moschata*, *Pulsatilla*.

Menstruation, before.—*Arsenicum*.

—— **during.**—*Calcarea*, *Chamomilla*, *Carbo vegetabilis*, *Natrum muriaticum*, *Lachesis*, *Phosphorus*.

—— **after.**—*Calcarea*, *Bryonia*, *Chamomilla*, *Phosphorus*.

During Pregnancy.—*Apis*, *Belladonna*, *Bryonia*, *Calcarea*, *Hyoscyamus*, *Mercurius*, *Nux moschata*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Staphisagria*.

While nursing.—*Aconitum*, *Arsenicum*, *Belladonna*, *Calcarea*, *Cinchona*, *Dulcamara*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Staphisagria*, *Sulphur*.

For children.—*Aconitum*, *Antimonium crudum*, *Belladonna*, *Calcarea*, *Chamomilla*, *Coffea*, *Ignatia*, *Mercurius*, *Nux moschata*, *Pulsatilla*, *Silicea*.

For sensitive, nervous persons.—*Aconitum*, *Belladonna*, *Chamomilla*, *Cinchona*, *Coffea*, *Hyoscyamus*, *Nux moschata*.

For persons who have taken much mercury.—*Carbo vegetabilis*, *Belladonna*, *Hepar*, *Lachesis*, *Staphisagria*.

—— **who drink much coffee.**—*Belladonna*, *Carbo vegetabilis*, *Chamomilla*, *Cocculus*, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Silicea*.

Getting better from :

Cold air.—*Nux vomica*, *Pulsatilla*.

Wind.—*Calcarea*.

Uncovering. - *Pulsatilla*.

Blowing upon it.—*Pulsatilla*.

Drawing air into the mouth.—*Nux vomica*, *Pulsatilla*.

Cold washing.—*Belladonna*, *Bryonia*, *Chamomilla*, *Pulsatilla*.

External Cold.—*Belladonna*, *Bryonia*, *Chamomilla*, *Cinchona*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Pulsatilla*, *Staphisagria*, *Sulphur*.

Cold hand.—*Rhus*.

Finger wet with cold water.—*Chamomilla*.

Holding cold water in the mouth.—*Bryonia*, *Cepa*, *Coffea*.

Cold drinking.—*Belladonna*, *Bryonia*, *Chamomilla*, *Mercurius*, *Nux vomica*, *Phosphorus*, *Pulsatilla*, *Rhus*, *Sulphur*.

In the open air.—*Antimonium crudum*, *Bryonia*, *Cepa*, *Hepar*, *Pulsatilla*, *Nux vomica*.

In the room.—*Nux vomica*, *Phosphorus*, *Sulphur*.

External warmth.—*Arsenicum*, *Belladonna*, *Calcarea*, *Chamomilla*, *Cinchona*, *Hyoscyamus*, *Lachesis*, *Mercurius*, *Nux moschata*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Staphisagria*, *Sulphur*.

Wrapping up the head.—*Nux vomica*, *Phosphorus*, *Silicea*.

Eating something warm.—*Arsenicum*, *Bryonia*, *Nux moschata*, *Nux vomica*, *Rhus*, *Sulphur*.

Drinking something warm.—*Nux moschata*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*.

Getting warm in bed.—*Bryonia*, *Nux vomica*.

Smoking tobacco.—*Mercurius*.

When eating.—*Belladonna*, *Bryonia*, *Chamomilla*, *Phosphoric acid*, *Silicea*.

After eating.—Arnica, Calcarea, Chamomilla, Phosphoric acid, Rhus, Silicea.

When chewing.—Bryonia, Cinchona, Coffea.

Biting.—Arsenicum, Bryonia, Cinchona, Coffea.

Picking the teeth, so that they bleed.—Belladonna.

Picking the teeth.—Phosphoric acid.

Rubbing the teeth.—Mercurius, Phosphorus.

Touching the teeth.—Bryonia, Nux vomica.

Sucking the gums.—Causticum.

Pressing upon the teeth.—Belladonna, Bryonia, Cinchona, Ignatia, Natrum muriaticum, Phosphorus, Pulsatilla, Rhus.

Moving.—Pulsatilla, Rhus.

When walking.—Pulsatilla, Rhus.

When at rest.—Bryonia, Nux vomica, Staphisagria.

Sitting up in bed.—Arsenicum, Mercurius, Rhus.

Getting up.—Phosphorus, Nux vomica.

When lying down.—Bryonia, Mercurius, Nux vomica.

—— **on the painful side.**—Bryonia, Ignatia, Pulsatilla.

—— **painless side.**—Nux vomica.

—— **lying down in bed.**—Mercurius, Pulsatilla.

In bed.—Sulphur.

When going to sleep.—Mercurius.

After sleep.—Nux vomica, Pulsatilla.

The pains extend

—— **to the jawbones and face.**—Hyoscyamus, Lachesis, Mercurius, Nux vomica, Rhus, Sulphur.

—— **to the cheeks.**—Bryonia, Causticum, Chamomilla, Mercurius, Silicea, Staphisagria, Sulphur.

—— **into the ears.**—Arsenicum, Bryonia, Calcarea, Chamomilla, Hepar, Lachesis, Mercurius, Staphisagria, Sulphur.

—— **into the eyes.**—Causticum, Chamomilla, Mercurius, Pulsatilla, Staphisagria, Sulphur.

—— **into the head.**—Antimonium crudum, Arsenicum, Chamomilla, Hyoscyamus, Mercurius, Nux vomica, Rhus, Staphisagria, Sulphur.

With headache.—Apis, Glonoine, Lachesis.

—— **rush of blood to the head.**—Aconitum, Calcarea, Cinchona, Hyoscyamus, Lachesis, Pulsatilla.

—— **swollen veins** of the forehead and hands.—Cinchona.

—— **heat in the head.**—Aconitum, Hyoscyamus, Pulsatilla.

—— **burning of the eyes.**—Belladonna.

—— **flushed cheeks.**—Aconitum, Arnica, Belladonna, Chamomilla, Mercurius, Nux moschata, Phosphorus, Pulsatilla, Rhus, Sulphur.

With pale face.—*Aconitum*, *Arsenicum*, *Ignatia*, *Pulsatilla*, *Staphisagria*, *Sulphur*.

— **swelling of the cheek.**—*Arnica*, *Arsenicum*, *Belladonna*, *Bryonia*, *Chamomilla*, *Lachesis*, *Mercurius*, *Natrum muriaticum*, *Nux vomica*, *Pulsatilla*, *Phosphorus*, *Phosphoric acid*, *Staphisagria*, *Sulphur*.

— **salivation.**—*Belladonna*, *Dulcamara*, *Mercurius*.

— **dry mouth and thirst.**—*Cinchona*.

— — — **without thirst.**—*Pulsatilla*.

— **dry throat and thirst.**—*Belladonna*.

— **chilliness.**—*Pulsatilla*, *Rhus*.

— **heat.**—*Hyoscyamus*, *Rhus*.

— **warm perspiration.**—*Hyoscyamus*.

— **chilliness, heat, thirst.**—*Lachesis*.

— **diarrhoea.**—*Chamomilla*, *Coffea*, *Dulcamara*, *Rhus*.

— **constipation.**—*Bryonia*, *Mercurius*, *Nux vomica*, *Staphisagria*.

NOTE.—You must not be surprised to find in the above list, the same remedies recommended for directly opposite symptoms, as, *Arsenicum*, for toothache, *worse* and *better* from warmth; this is really often the case.

The following medicines with their symptoms are arranged according to their importance, and in order to facilitate the finding of any particular medicine, this alphabetical index is given:

<i>Aconitum</i> ,	3	<i>Cepa</i> ,	18	<i>Mercurius</i> ,	13
<i>Antimonium crudum</i> ,	20	<i>Chamomilla</i> ,	5	<i>Nux moschiata</i> ,	6
<i>Apis</i> ,	26	<i>Cinchona</i> ,	12	<i>Nux vomica</i> ,	7
<i>Arnica</i> ,	1	<i>Coffea</i> ,	2	<i>Phosphorus</i> ,	17
<i>Arsenicum</i> ,	19	<i>Dulcamara</i> ,	28	<i>Phosphoric acid</i> ,	25
<i>Belladonna</i> ,	11	<i>Glonoine</i> ,	4	<i>Pulsatilla</i> ,	8
<i>Bryonia</i> ,	21	<i>Hepar</i> ,	14	<i>Rhus</i> ,	22
<i>Calcareo</i> ,	29	<i>Hyoscyamus</i> ,	10	<i>Silicea</i> ,	27
<i>Carbo vegetabilis</i> ,	15	<i>Ignatia</i> ,	9	<i>Staphisagria</i> ,	23
<i>Causticum</i> ,	30	<i>Lachesis</i> ,	24	<i>Sulphur</i> ,	16

1. *Arnica* is very useful after the extraction of a tooth, but vinegar must not be used; it is always injurious; it will stop the bleeding and accelerate the healing of the gums. Five drops of the tincture should be mixed with half a tumblerful of cold or tepid water, and the mouth rinsed several times with this. After the insertion of artificial teeth, it relieves the pain and the swelling; after the dentist has removed carious portions of teeth, mix a few globules of it in a teaspoonful of water, and put some of it on the teeth which have been operated on. In very intense pain, occurring after a tooth has been drawn, sometimes *Hyoscyamus* is of use; when the pain is severe after putting in new teeth, give *Aconitum* and then *Arnica*.

Arnica is sometimes good for toothache, when attended by pressing throbbing, as if the blood were forcing the tooth out, or as if it had been started from its socket—worse when touched; it is also frequently of service for hard swelling of the cheeks, which frequently remains after the toothache has been cured.

2. *Coffea* will remove the severest pains, which drive the patients almost frantic; when they cry, tremble, and do not know what to do; and when the pain is indescribable; if the blood presses into the teeth, they feel as if too close together, or as if something were lodged between them. The pain is often relieved by holding ice-water in the mouth. If it proves inefficacious, give *Aconitum*, *Veratrum*, *Sulphur* or *Hyoscyamus*. For stinging, jerking pain, or intermitting pressure or pain when chewing, it is to be preferred to all other remedies.

3. *Aconitum* must be given in all those cases where the patients are almost frantic with pain, which is indescribable, and which *Coffea* has failed to relieve; also for throbbing pains, occasioned by taking cold, with determination of blood to the head; burning in the face; it is particularly suitable for children; when it is no longer efficacious, give *Chamomilla* or *Belladonna*.

4. *Glonoine* for toothache from taking cold, after having been over-heated, if the beating of the pulse is felt in all the teeth, or a drawing in all the teeth, sometimes in the upper and sometimes in the lower ones, and if the blood rushes to the head, with headache.

5. *Chamomilla* is beneficial in many kinds of toothache, particularly in children—and in persons who are frequently vexed, and who drink much coffee—also in females before menstruation; pain in the decayed teeth, after taking cold when in a perspiration, or when the patient is very irritable and inclined to cry; when the pain is unendurable and aggravated periodically; is worse during the night; when no particular tooth can be pointed

out as the painful one; or when the tooth is decayed, feels as if too long, and is loose (if it only appears loose without being so, *Bryonia* will suit better), or when the pain extends through all the teeth, and every tooth feels too long; also when it extends through the jaws to the ear; or through the temples to the eyes; or is mostly on one side, in the teeth, jaws, ears and head; when there is crawling, sluggish pain continually, or feels like scraping and scratching on the decayed tooth, after which the pain increases; drawing and tearing or boring and throbbing pain; when at its height, the pain is stinging and jerking, and extends to the ear; the patient cannot bear the warmth of the bed, and the pain generally commences soon after meals, particularly after eating or drinking anything warm; when it grows much worse after drinking cold water—also after coffee; cannot be relieved by anything but dipping a finger into cold water and applying it to the tooth; when, while the pain lasts, the cheek is red and hot, or the cheek and gums are swollen and of a light red color; when the glands under the chin are painful and swollen—if the toothache is accompanied with great weakness, particularly in the joints; pain in the articulation of the jaw on opening the mouth, extending to the teeth—*Chamomilla* will certainly cure. When it is partly adapted to the symptoms, and gives but incomplete relief, and the teeth are decayed, compare *Antimonium crudum* and *Mercurius*, and then the following:

6. *Nux moschata* suits children, women—particularly during pregnancy—and all people with a cool, dry skin, who do not easily perspire; for pains from taking cold in damp, cold weather, or from the night air; for pains which get worse if air, particularly cold, damp air, is drawn into the mouth; if warm water or warm applications ease the pain; for toothache which is increased by the shaking of the body in going up or down stairs; if the pain commences on the right side and goes to the left, as if the tooth were being wrenched out (*Nux vomica*, *Ipecacuanha*); worse

from much talking; or cold air enters the mouth, there is a constant grumbling and soreness of the teeth; if the teeth easily become blunt.

7. *Nux vomica* is useful for toothache in persons of a hasty temper, with ruddy complexion, who like coffee and ardent spirits—have little out-door exercise, or who have taken cold; when a healthy tooth is painful and feels loose, or the teeth seem too long, and as if all the blood were pressing into them, with jerking, shooting pains in the lower jaw; a drawing pain extending to the temple, or a pain from a decayed tooth, affecting the whole face and even the bones, or extending over the whole side; or for drawing and boring pains in a decayed tooth, as if it were wrenched out (*Arnica* and *Mercurius*), or had been bitten out, accompanied by violent stitches, which affect the whole body, particularly on inspiration; when a dull pain in the bones changes to a tearing pain, which passes through the teeth and jaws, or there is a boring, digging, gnawing, tearing pain on one side; sometimes for jerking or rheumatic pains, attended with a pricking sensation; when they generally commence in bed or in the evening, prevent chewing, grow worse or return as soon as the mouth is opened in the cold air; or when reading or thinking; or when the tearing pains become worse by the contact of cold liquids, but better from warmth; in general the pains are worse after eating and exercise; also, when along with the tearing pains the glands beneath the lower jaw are painful, and particularly when a swelling appears on the gum, which seems about to burst (*Lachesis*).

8. *Pulsatilla* is most suitable for persons of a mild, quiet, timid disposition, or for women and children of a fretful temper; when the pain is only on one side; for toothache which is prevalent in the spring, accompanied by earache and headache, confined chiefly to the same side; when there is a stinging pain in the decayed tooth, accompanied by great painfulness of the left side of the face, extending to

the ear, with heat in the head and chills over the whole body; but particularly when there is a gnawing pain in the gums, and pricking as of pins, with tearing and jerking in the tooth itself, as if the nerve were stretched and then suddenly relaxed; or for jerking or tearing in the tooth as if it would start from the jaw, as if the blood were pressing into it or a pressing or throbbing pain, and aggravated by cold water, the heat of the bed, or warm room, or by taking anything warm into the mouth; relieved by cool air, drawing cool air into the mouth, or in the open air generally; the toothache always ceases entirely in the open air, but returns in the warm room and gets worse; worse when sitting, better when walking about; worse from picking the teeth, better from pressure — chewing does not make it worse; it comes on mostly toward evening, rarely in the morning, and is accompanied by chilliness and pale face, or with congestion of blood to the head; or with heat without thirst; for toothache caused by drinking chamomile tea.

9. *Ignatia* will be serviceable in cases where the foregoing remedies appear to be indicated, but are insufficient, and the patient is of a more tender and sensitive disposition, gentle and quiet, sometimes cheerful, at other times inclined to tears; particularly for persons who grieve much; when the jaw-teeth feel as if crushed; when there is boring pain in the front teeth, and soreness in all the teeth; worse after drinking coffee, after smoking, after dinner, in the evening, after lying down, and in the morning on waking.

10. *Hyoscyamus* in very sensitive, nervous, excitable persons; the pain almost drives the patient mad—it is tearing or throbbing, extending to the cheeks and along the lower jaw; or there is a tearing, raging pain in the gums, with a buzzing pain in the tooth, which is loose, and feels, when chewing, as if it were coming out; or jerking, throbbing, drawing, tearing, which extends to the forehead; violent

tearing pains in different teeth, as if the blood were pressed into them, occasionally accompanied by flushes of heat, with determination of blood to the head; it is caused by cold air; generally comes on in the morning, and is sometimes accompanied by jerking in the fingers and arms, especially in persons who are subject to convulsions.

11. *Belladonna* is frequently best adapted to women or children, particularly when the pain and anguish cause great restlessness, running about, or where there is depression of spirits, and a disposition to cry; when the teeth and gums pain as if sore; when biting produces a feeling as if there were ulcers at the roots of the teeth with stinging, cutting, jerking, tearing pain; when the pain radiates from one tooth in all directions and for a drawing pain, which is worse after going to bed, and during the night; or for pricking pains in a decayed tooth, day and night; or a pain in a decayed jaw-tooth, as if too much blood were forced into it, with heat in the gums and throbbing in the cheeks—nothing mitigates the pain but pricking the gum until it bleeds; or the gums are swelled, with burning and stinging pains, discharge of much saliva, the cheek swelled, sometimes the eyes burn and the throat is dry, with great thirst—frequently the pain returns in the morning on awaking, or begins again some time after meals; the teeth ache when exposed to the open air, when touched, when biting, when food or hot liquids come in contact with them—pressing hard upon the cheeks sometimes gives relief.

12. *Cinchona* is particularly suited for toothache in mothers who are nursing—for persons who, otherwise cheerful, become cross and irritable; if a black coating appears on the teeth; the pain comes on periodically, and is throbbing, jerking-tearing, pressing-tearing, or drawing, digging, with great pressure, as if the blood was forced into the teeth, or boring and numbness about the teeth—

the pain is worse when in motion, when touched, and returns on exposure to a draught of air—the gums swell, the mouth is dry, there is thirst, the head is congested, veins of the forehead and hands swell; and the sleep during the night is uneasy, even when the pain is not great.

13. *Mercurius* is frequently suitable for children; in general for toothache in decayed teeth; when there are tearing pains in several teeth at once, in decayed ones and those adjoining them, and it feels as if the teeth were being wrenched out—the pain affects the whole side of the face, or drawing and stinging pains extend to the ear; it is particularly troublesome during the night; or for excruciating jumping pains in the teeth, especially at night, with stitches extending to the ear and the head, which drive the patient out of bed (*Magnesia*); also for a stinging pain in a decayed tooth, which is worse after eating or drinking anything cold or warm; the pain is generally increased by cold, and particularly by damp air, is less severe when in a warm place, or when the cheek is rubbed—the air is sometimes painful to the front teeth; or the toothache is only felt during the day and ceases during the night, and is followed by perspiration, and in the morning the same pains return again, in paroxysms, with longer or shorter intervals, alternating with giddiness, or tearing in the limbs; the teeth are almost always loose, the gums swell or become white and ulcerated, are detached from the teeth, burn and ache when touched; or they begin to itch, to bleed and to suppurate, with tearing through the roots of the teeth, for toothache with painful swelling of the cheeks, it is the principal remedy. See “Swelled Face.”

14. *Hepar* will be beneficial after *Mercurius* or *Belladonna*, when the painful swelling of the gums continues, or for a throbbing pain as if blood were forcing into the tooth, or a drawing pain, the pains worse after eating, and in a warm room, or at night.

15. *Carbo vegetabilis* is sometimes useful when *Mercurius*

or *Arsenicum* give some relief, without effecting a perfect cure; also in persons who have taken much calomel, particularly when the gums bleed, and are separated from the teeth; the teeth are loosened, become ulcerated, and ache when touched by the tongue; are worse after eating, with drawing and tearing pains in the incisors or for smarting pains.

16. *Sulphur* is most suitable for jumping pain in decayed teeth—extending to the upper and lower jaw, or to the ear; for swelling of the gums, attended with throbbing pain, bleeding of the gums, and swellings around old stumps; for toothache in the evening, or in the air, from draught, worse when rinsing the mouth with cold water.

17. *Phosphorus* for toothache from washing or from having had the hands in cold or warm water, which is the cause of its returning on certain days of the week.

18. *Cepa* for toothache with cold in the head, or which gets better when the catarrh becomes worse and which gets worse when the catarrh becomes better; from damp, cold weather and wind; if it commences on the left side and goes to the right; worse in the warm room; if it is a throbbing, drawing, pressing; when the back teeth ache when chewing and are better from cold water; if the teeth become yellow; for people who have an offensive breath, or who are fond of being in the open air and who are very fond of bathing.

19. *Arsenicum* when the teeth seem loose and elongated, with jerking, throbbing pain; if when chewing it feels as if the teeth were being pressed into ulcerated spots, or burning, and tearing in the gum, worse when touched, when lying on the affected side, and when at rest, and also from cold; the pains are mitigated by the heat of the stove, by hot applications, or by sitting up in bed; it is particularly indicated when the pains are very debilitating, or if people, particularly children, are made very angry by them. It should always be given if the patient

feels feverish, with cold hands, particularly when the finger tips feel cold.

20. *Antimonium crudum* for pains in decayed teeth, of a boring, digging, tearing, jerking character, which sometimes penetrate into the head; the pains are aggravated in the evening in bed, after eating, by cold water; and are better when walking in the open air.

21. *Bryonia* for passionate, irritable, hot headed, obstinate people; the pain occasionally in the decayed teeth, but more frequently in the healthy ones; shooting pains with stitches towards the ear; tearing pain extending to the cheek, and acute pains, as if caused by an exposed nerve; sensitiveness and pain in the decayed teeth from contact with the air; the teeth feel as if too long and loose, but are not so, and when chewing they feel as if they would fall out. The pains are aggravated by smoking or chewing tobacco; from the introduction of anything warm into the mouth—better in the open air—sometimes relieved by cold water, but only momentarily, and also when lying on the affected cheek, but worse when lying on the other. Likewise, when the pain shoots from one tooth into the other, and also into the head and cheeks.

22. *Rhus* for the same painful sensation of elongation of the teeth, as *Bryonia*, and also when they seem to be loose, shaky, or as if the tooth were hollow and air were blowing into it, or as if they were asleep (*Cinchona*, *Dulcamara*); the gums are swollen, burn, and itch as if ulcerated, or they are sore and detached from the teeth; for jumping, shooting, or drawing pain, as if the teeth were being torn out (*Pulsatilla*), or pressed into their sockets (*Staphisagria*), or for slow pricking or throbbing tearing in all the teeth, extending into the jaws and temple, with a painful soreness of one side of the face; if it arises from taking cold, or from vexation, is worse in the air (*Bryonia* toothache is better), insufferable during the night, and mitigated by heat; sometimes accompanied by an offensive

smell from the carious teeth. It suits best for quiet persons (unlike *Bryonia*) who are disposed to sadness and melancholy, or become agitated and afraid (similar to *Belladonna*).

23. *Staphisagria*, when the teeth become black and decayed and scale off, the gums are pale, white, ulcerated and swollen (*Lachesis*)—pain when touched; throbbing in the gums; the gums are covered with blisters and ulcers; also for intense gnawing, drawing or tearing pains in decayed teeth, particularly in the roots, or extending through a whole row, or the pain extends from a decayed tooth to the ear, with throbbing in the temple—worse in the open air, when drinking anything cold, from chewing, eating, and particularly during the night or toward morning.

24. *Lachesis*, if all the decayed teeth pain from congestion of blood to the head; for drawing, tearing, throbbing, jumping, boring into the jaw bones; the decayed teeth feel too long; the gums are inflamed and the pain extends down into the throat; relief comes when pus is discharged, gums swollen, bleeding easily, or they are bluish-red, beating and burning, worse from anything warm; toothache worse after warm and cold drinks, after eating and awaking; with headache, beating over the eyes, stitches in the ears, swelling of the cheek; slight pains in the limbs of the opposite side; chills, fever and thirst. It is particularly suited for colds in damp, warm, spring weather; when the toothache comes during menstruation, the less the flow the greater the pain, or at the cessation of menstruation; for melancholic or choleric persons; for persons of vivid imagination; after long-continued grief, and after the abuse of mercury.

25. *Phosphoric acid* is suitable for bleeding and swollen gums; tearing pains which are worse when warm in bed, and also from heat and from cold, burning in the front teeth during the night; pains from decayed teeth, extending to the head; tearing, pressing apart, as if the teeth would be forced out.

26. *Apis* for the most violent pains in the gums, also for jerks and throbbing in the molars, with involuntary, sudden biting together of the teeth, headache or bleeding of the gums.

27. *Silicea* for tedious, boring, tearing pains, day and night, worse during the night, spreading over the whole cheek, also into the bones of the face; discharge of offensive matter from fistulous openings near the roots of the teeth, or from the gums; swelling of the jaw-bones.

28. *Dulcamara* is sometimes useful for toothache proceeding from cold, particularly when accompanied by diarrhoea, and when *Chamomilla* does not help; also when the head is affected, or when the toothache is accompanied by profuse salivation (similar in this to *Belladonna* and *Mercurius*), which makes the teeth feel dull or numb.

29. *Calcarea* for toothache in pregnant women; pains in decayed teeth, especially around loose stumps; in general when a loose tooth causes continuous pain; pressing, drawing, jerking soreness; drawing, pricking, boring, biting, gnawing, digging, throbbing pains, with swelled gums, which are sensitive, bleed easily, throb and pain; it is only suitable when there is determination of blood to the head, particularly during the night; when the pains are caused by taking cold, or are aggravated by cold or a draught of air; the patient can neither bear warm nor cold drinks—even noise makes the suffering worse.

30. *Causticum* for toothache arising from the contact of the inspired air with the tooth, generally attended with stinging, throbbing pain and a feeling of soreness; or the teeth feel painfully loose and lengthened, as if forced out of their sockets (*Arnica*, *Phosphoric acid*); when there are fistulas at the roots of the teeth, and the suppurating gums are swollen and painfully sensitive. The pain frequently affects the whole of the left side of the face, especially at night when the patient lies on it, and is equally sensitive to heat and cold; for long-continuing pains always returning after taking cold.

SWELLED FACE.

For "Swelled Face," which is often worse than the toothache, or for the swelling which remains after it, choose among the following remedies which have already been mentioned under "TOOTHACHE," if they are otherwise indicated: *Arnica*, *Chamomilla*, *Nux vomica*, *Pulsatilla*, *Belladonna*, *Cinchona*, *Mercurius*, *Sulphur*, *Phosphorus*, *Arsenicum*, *Bryonia*, *Staphisagria*, *Calcarea*, *Causticum*.

Mercurius is the chief remedy when the face and the upper lip are so swollen that the person can hardly be recognized; the pains very violent, as if proceeding from a decayed tooth or a root; if it tears, burns, beats, internally more than externally; when there is hardness about the teeth, or after much pain it suppurates and breaks.

If *Mercurius* mitigated the pain but did not lessen the swelling, *Pulsatilla* or *Belladonna* may be given. When the lips are very much swollen, the pain from the swollen gums extends into the throat, swallowing is painful, and saliva runs from the mouth, give *Belladonna* at once. If the pus is felt in the swelling but this will not break, *Hepar* often hastens it; afterwards give *Silicea*. When after breaking it will not heal, if bad tasting or smelling fluid oozes from the opening, give *Sepia*. A piece of fig boiled in milk may also be held in the mouth. If all this does not relieve, give *Lachesis*. If the pains cease but the swelling remains, give *Pulsatilla*, if *Chamomilla* relieved before; *Belladonna* or *Mercurius*, if *Pulsatilla* relieved; *Mercurius* or *Sulphur*, if *Belladonna* relieved; *Pulsatilla*, *Belladonna* or *Sulphur*, if *Mercurius* relieved. If the pain was only lessened by *Bryonia* or *Arsenicum*, *Sulphur* may also be given.

Arnica, if the swelling is hard, but neither very painful nor very red. *Chamomilla*, if the swelling is very red and uneven. *Belladonna*, if it is yellowish-red and has an

offensive odor. Lachesis, if it becomes yellow or blue, or there are blisters on it.

Externally, apply nothing but a handkerchief to keep off the air, except when there is much tension, and the swelling is not extensive; in this case, make a linen compress about the size of a half dollar, dip it into warm water, and after squeezing it, apply it to the swelling, and tie a dry handkerchief over it; if the redness spreads extensively in streaks, or if the swelling becomes yellowish or red and blistered, a small flat bag of rye flour or bran, moderately heated and applied to the cheek, may be of advantage. If it itches much, corn starch will be beneficial; if it breaks externally, apply a rag greased with mutton suet, tie a handkerchief over it, and give *Silicea*.

FACEACHE, NEURALGIA OF FACE.

In this painful complaint you can often obtain relief from the remedies recommended for toothache, but the most important medicines are given below. If they are insufficient consult a homeopathic physician. Do not think that this complaint can be cured by cutting or burning; in most cases when the nerve has been cut or burnt out, the complaint has returned in a much worse form. Sometimes relief may be obtained by cold or warm water, whichever suits best.

Aconitum, if there is redness and heat of the face, and other symptoms mentioned under Aconite for toothache; great exasperation, with agitation, restlessness; the patient is beside himself with pain; neuralgia alternates with rheumatic pains.

Belladonna, if the pain is most violent under the eye, and is excited by rubbing the part affected; darting pains in the cheek-bones, nose, jaws, or cutting and tensive pains, with stiffness at the nape of the neck, and clenching of the jaws; twitches in the eyelid, or violent shooting and tearing, and dragging pains in the ball of the eye; eyes water; convulsive jerking in the muscles of the face, and distortion of the mouth; heat and redness in the face. The pain comes in spells, it suddenly disappears almost entirely and as suddenly returns. The right side is generally affected.

Platina for boring pain, cramp-like; painful feeling of

numbness in the cheek-bones, as if the parts were between screws; the pains are attended with anxiety, weeping and palpitation of the heart.

Colocynthis for violent rending and darting pains, which chiefly occupy the left side of the face, are aggravated by the slightest touch, and yet in some cases firm pressure relieves the pain. The suffering is relieved also by perfect rest and by warmth.

Arsenicum, when the attacks return periodically, and the pains are more especially burning, stinging as from red-hot needles; great anguish, with restlessness; excessive prostration, with desire to lie down; temporary amelioration from external heat; pains are worse after midnight, especially if the disease has been caused by malarial influences.

Spigelia for tearing, shooting and burning pains in all directions; periodical, from morning till sunset but worse at noon; worse from motion or noise, with watering of the eyes; the pain is most frequently on the left side; the cheek is dark red.

Arnica for heat and throbbing. *Bryonia* for heat and pressing pain, better from external pressure. *Staphisagria*, when there is heat with throbbing, shooting, cutting, tearing pain or burning pressure in the cheek bones, particularly on the left side. *Cepa* for heat in the face and pain from above downwards, as if from a thread deep in the bones of the left side, worse in the evening. *Calcarea* for tearing pain (first left, then right side). *Arsenicum*, drawing, piercing pain (first right, then left side). *Cinchona* or *Hepar*, drawing and tearing in the bones, worse when touched. *Hyoscyamus*, pressing or squeezing in the jawbones. *Rhus*, pressing, cutting, stabbing.

For violent pains, mostly in the bones, look under *Belladonna*, *Hepar*, *Cinchona*, *Hyoscyamus*, *Staphisagria*. For pressure in the cheek-bone, worse when touched, compare *Hepar* and *Cinchona*; worse in the evening, *Capsicum*. For jerking, shooting pains, *Pulsatilla*.

CHAPTER VIII.

AFFECTIONS OF THE MOUTH.

BAD TASTE IN THE MOUTH.

If the taste in the mouth is altered and the other symptoms are not sufficient for the selection of the proper remedy, consult the following list:

Bitter taste in the morning.—Sulphur, Mercurius vivus, Bryonia, Calcareæ, Silicea.

When solid food tastes bitter.—Sulphur, Bryonia, Rheum, Rhus tox., Hepar, Colocynthis, Ferrum met.; food and drink both bitter: Pulsatilla, Cinchona; bitter taste after eating or drinking: Pulsatilla, Bryonia, Arsenicum; in the morning or evening: Pulsatilla, Arnica; at different times, or continually, besides the above medicines: Aconitum, Belladonna, Veratrum, Nux vomica, Chamomilla, Antimonium crudum, Carbo vegetabilis.

For sweet taste.—Mercurius vivus, Sulphur, Cuprum, Belladonna, Pulsatilla, Bryonia, Cinchona, Ferrum, Spongia; in the morning: Sulphur; when bread tastes sweet: Mercurius vivus; beer: Pulsatilla; blood-like, sweetish taste: Ferrum, Sulphur; when like nuts: Coffea.

For salt taste.—Carbo vegetabilis, Rheum, Phosphoric acid, Nux vomica, Sulphur, Arsenicum, Natrum muriaticum, Cuprum; when food tastes salt: Carbo vegetabilis, Sulphur; salt taste when coughing: Carbo vegetabilis, Cocculus.

For sour taste.—Rheum, Phosphoric acid, Nux vomica, Cinchona, Sulphur, Capsicum, Calcareæ, Natrum muriaticum, Cocculus, Cuprum; the food tastes sour: Cinchona, Calcareæ; after meals: Pulsatilla, Nux vomica, Carbo vegetabilis, Natrum muriaticum, Cocculus, Silicea; after drinking water: Nux vomica, Sulphur; after drinking milk: Carbo vegetabilis, Sulphur; in the morning: Nux vomica, Sulphur.

Acrid, biting taste.—Veratrum, Rhus tox.; brunt, smoky taste: Pulsatilla, Nux vomica, Sulphur; taste like herbs: Veratrum, Nux vomica; taste like peppermint: Veratrum.

Earthy taste.—Pulsatilla, Hepar, Cinchona; insipid taste: Pulsatilla, Rheum, Staphisagria, Bryonia, Cinchona, Sulphur, Dulcamara, Rhus tox., Ipecacuanha, Capsicum; slimy taste: Belladonna, Rheum, Arnica, Rhus tox., Platina; greasy, oily taste: Silicea, Causticum; greasy taste: Causticum; sticky taste: Phosphoric acid; watery taste: Staphisagria, Cinchona, Causticum.

Putrid taste.—*Arnica*, *Mercurius vivus*, *Belladonna*, *Bryonia*, *Chamomilla*, *Pulsatilla*, *Aconitum*, *Veratrum*, *Phosphoric acid*, *Sulphur*, *Rhus tox.*, *Natrum muriaticum*, *Cuprum*, *Causticum*; in the morning: *Sulphur*, *Rhus tox.*; after meals: *Rhus tox.*; taste like pus: *Pulsatilla*.

When tobacco has a sharp taste.—*Staphisagria*; when bitter: *Cocculus*; loathsome: *Ipecacuanha*; disagreeable: *Ignatia*, *Pulsatilla*, *Nux vomica*, *Arnica*, *Calcarea*, *Cocculus*.

When food has no flavor.—*Mercurius*, *Pulsatilla*, *Staphisagria*, *Bryonia*, *Nux vomica*, *Arsenicum*; absence of taste: *Veratrum*, *Belladonna*, *Pulsatilla*, *Rheum*, *Bryonia*, *Hepar*, *Hyoscyamus*; in chronic cases: *Silicea*, *Natrum muriaticum*.

OFFENSIVE BREATH.

Bad breath may be caused from disordered stomach, abuse of mercury, decayed teeth, disease of the gums, ulcers in the mouth, catarrh of the nose, sore throat, or want of proper attention to cleanliness, leaving particles of food in the teeth, etc.

Rinse the mouth and throat after every meal with cold water, and brush the teeth with a soft brush after each meal.

If from decayed teeth, consult a dentist; or if this cannot be conveniently done, the cavities in the teeth should be carefully cleansed and filled with wax. The tooth can be readily cleaned by making use of a roll of blotting paper of convenient size, and applying it repeatedly to the decayed part.

Rinsing the mouth with water containing charcoal, or chewing a roasted coffee-bean will improve the breath for awhile.

The smell of garlic or horseradish may be overcome by drinking some wine, eating a pear or a boiled beet or by chewing fresh parsley.

When the offensive breath arises from deranged stomach, or other diseases, the proper remedy for it will be found under their respective heads.

If the bad breath is only perceived in the morning, give *Nux vomica*; in the morning and at night, *Pulsatilla*; after dinner only, *Chamomilla*, and besides in many cases *Bryonia*, *Arnica*, *Arsenicum*, *Hyoscyamus*. If the breath smells like onions, give *Cepa*; sweet sickish as if much mercury had been used, *Mercurius*; putrid, *Carbo vegetabilis*; for a bad breath with white-coated tongue, in persons of a very changeable disposition and who easily take cold, give *Nux moschata*.

SCURVY CANKER AND SIMILAR AFFECTIONS OF THE MOUTH.

In this affection the gums become hot, red, and very sensitive; they swell, become spongy, and separate from the teeth; small ulcers make their

appearance on the gums, the inside of the lips, the cheeks, on the palate and even on the tongue; a putrid, very offensive smell is emitted from the mouth, there is a discharge of tough, offensive mucus and saliva; sometimes the glands of the throat swell and become painful; the patient becomes very weak. If the disease has appeared in consequence of an improper diet, *i. e.*, from an absence of fresh vegetables, or from eating too much salt food, these needed foods should be supplied. Lemon juice is greatly necessary in such cases.

Mercurius, in almost every case of scurvy, is the most efficacious remedy, and may always be given at the commencement of the disease, unless it has been brought on by the abuse of this medicine; in which case, it will be necessary to give *Carbo vegetabilis* or another antidote. In cases where *Mercurius* is not entirely curative, *Dulcamara* may be given.

If the disorder has arisen from the excessive use of salt food, *Carbo vegetabilis* or *Arsenicum* will be of most service, and if these fail to produce a favorable change, a drop of sweet spirits of nitre may be taken once or twice a day with benefit.

Capsicum may be indicated as the first remedy when the affection occurs in inert and corpulent persons, and arises from uncleanness or want of exercise in the open air.

Arsenicum may be given if the ulcers burn violently, the patient is much debilitated, or if *Mercurius* proves inefficacious; if the gums become black, continue the *Arsenicum*; but if blue blisters appear on their edges, give *Lachesis*.

Mercurius sublimatus must be given if the ulceration is very extensive and has already spread to the nose, and when the ichor runs back into the throat and causes complaints of the stomach and painful diarrhoea. *Muriatic acid*, very much diluted, is better if the trouble was brought on by the use of too much salt food.

Dulcamara, when the disorder results from taking cold, and the glands of the throat are swollen and hard.

Carbo vegetabilis, besides being preferable in all those cases arising from the abuse of mercury or salt, is particularly beneficial when the gums bleed much and smell very offensive. If it is insufficient, give afterwards *Lachesis* or *Capsicum*.

Natrum muriaticum, when the ulcers spread slowly and the above remedies give little or no relief; the gums are swollen, bleed and are very sensitive; every thing cold or warm, or eating and drinking affects them; when white blisters and small ulcers appear on the tongue, which bite and burn, and render talking painful.

Among the most important measures in vogue for this complaint, the one which is most to be recommended is, lemon juice; this is productive, especially in summer and at sea, of a very salutary effect. If no lemons are at hand, raw potatoes, grated, will answer; but raw sour-kraut is better.

Fruit, vegetables and fresh meat must, as far as possible, form the chief articles of diet.

AFFECTIONS OF THE TONGUE.

Aconitum for inflammation and swelling of the tongue.

Mercurius, after *Aconitum*; or at first when there is violent pain, swelling, hardness and salivation; also in ulceration of the tongue.

Belladonna, when *Mercurius* does not effect a cure, and other parts of the mouth are painful and ulcerated. It may be taken either before or after *Mercurius* for induration of the tongue.

For inflammation caused by wounds, give first, if the pain is very severe, *Aconitum*, and then *Arnica*; should the pain increase, give *Aconitum* again, and *Arnica* once more, if necessary.

Natrum muriaticum, if from the sting of bees or the like.

Arsenicum, then *Lachesis*, in dangerous cases, when no physician is at hand, with threatened gangrene, indicated by dark and greenish or black appearance of the tongue, etc.

Phosphoric acid in inflammation produced by biting the tongue during sleep.

Apis, if the tongue looks scalded, is much swollen, with burning blisters on its margins, burning, stitching, bright redness and dryness.

For paralysis of the tongue, give *Belladonna*, *Hyoscyamus* or *Nux moschata*, according to the other symptoms and dispositions of the patients.

If children will not learn to talk, *Natrum muriaticum* may be tried.

CHAPTER IX.

AFFECTIONS OF THE STOMACH.

WANT OF APPETITE.

The common remedies for arousing the appetite are mostly calculated to impair it altogether. Articles highly salted, sour or acrid; burning, heating spices, roots, herbs or barks steeped in liquor, and taken as stomachics may be beneficial medicines when used at the proper time, in the right case, and in appropriate quantities; and every one knows from his own experience, or has witnessed it in others, that they sometimes produce a salutary effect. But as all medicines are injurious when taken in too great quantities, or too frequently, the trying of many of these things must, of course, do more harm than good, and particularly when the patient accustoms himself to their use. Of what benefit is it to awaken the appetite for a day or two, if it fails again immediately? As it is the case with all food that is partly retained in the body and partly thrown off, so it is with these substances also, which containing no nutriment, cannot supply any to the human economy. By degrees, these substances so accumulate in the system, that they cause incurable diseases: not in the intestines, whence they might be expelled by purgatives; not in the blood, whence they might be extracted by bleeding. No, these are popular errors; everyone who knows anything of physiology, is aware that nothing can remain in the blood any more than in the intestines, the former changing every-day; but it is the solid parts of the body which undergo a change.

Persons who use these things now and then in small quantities, cannot do themselves great harm. Sometimes salt fish or acids, particularly in summer, have a good effect, especially when there is strong craving for these things, and when this longing ceases after having been satisfied; if however the same craving returns very soon, it is a sign that their use is injurious.

The best remedy, in addition to exercise and recreation in the open air, is the regular use of cold water. In the morning, particularly fasting, an hour or two before, and a couple of hours after each meal, and in the evening before going to bed, drink regularly a glass of water. At meals drink moderately, and after eating heartily but small quantities at a time.

WEAKNESS OF THE STOMACH. DYSPEPSIA. INDIGESTION.

The most essential information respecting this complaint, when it is felt very soon after eating, has been given under Chapter IV., Part I. When arising from other causes, see Chapters I., II. and V., Part I. There are, however, many cases where different causes exercise an influence at the same time; or where the causes are not known, or some are of a temporary nature, while others are lasting, the latter generally passing under the name of dyspepsia; some cases of this kind are the commencement of violent and dangerous diseases. "Dyspepsia" is a very convenient name often used by physicians to conceal their ignorance. It means "bad digestion," and this accompanies a great many diseases, it is generally a mere symptom of another disease which the physician does not know, he therefore calls it "Dyspepsia," and most patients are satisfied, because they believe a physician can cure every disease which he can call by a learned name! We will here mention several kinds of which anyone can cure himself; but there are many complaints called dyspepsia which need the aid of a homœopathic physician.

The most important condition for a cure is a rational mode of living, not adopted for a time merely, but permanently; the food must be wholesome, nutritive, of sufficient quantity, and also varied, to suit the requirements of the stomach. But to be more definite it may be said that the proper diet consists in avoiding everything old, salty, pickled or otherwise half spoiled or dried, for instance rancid butter. In the morning partake of a light breakfast, nothing heavy, little or no meat, sometimes eggs, nothing fried in fat or butter, no new warm bread, but have stale bread. For dinner eat vegetables and meat boiled or roasted, and for dessert stale bread and butter, no cake or pies, not even the fruit baked in it. In the evening eat little and only very light things, nothing baked or fried, and take cold water in preference to all other drinks. Do not ever suppose that anything sour can be sweetened; the tongue may be cheated in this way, but not the stomach; the same holds good with acrid or bitter things.

For all acute cases of indigestion which are usually attended with want of appetite, nausea, pains, particularly griping, disturbed sleep and weakness, select from among the first medicines here prescribed; in chronic cases among those found further on.

Arnica, when the disorder has been caused by a blow upon the stomach, or by lifting heavy weights, with pain and a sensation as if the small of the back were broken; by much mental application, and particularly when caused by over-excitement and irritability; when the patient is very nervous, the tongue dry, or coated yellowish; the taste putrid or bitter and sour, with a bad smell from the mouth; the patient, even if accustomed to smoking, loathes tobacco; craving for something acid; eructations sometimes, with a taste as of rotten eggs; after meals a sense of fulness in the pit of the stomach, inclination to vomit, retching, flatulency; the abdomen is distended; accompanied by a heaviness in all the limbs, weakness in the legs, giddiness, fulness in the head, particularly over the sockets of the eyes, dull feeling and heat in the head, disagreeable warmth, frequent awaking, starting up in sleep, troubled dreams. If *Arnica* does not suffice in these cases, give *Nux vomica*, or, this not answering, *Chamomilla*.

Nux vomica, if caused by dissipation and late hours, by drinking wine or coffee, particularly if the patient has caught cold besides; when the mouth is dry without thirst, the tongue coated white; accumulation of mucus in the mouth, and heartburn, no taste, or all kinds of food taste insipid, water collects in the mouth, vomiting, pressure and weight in the stomach, the abdomen is distended, scanty and hard evacuations, or none at all; reeling, giddiness or dulness in the head, heaviness in the back part of the head, ringing in the ears, drawing sensation in the molars, sometimes below and sometimes above; drawing in the limbs; want of energy and aversion to thinking; the patient is restless, quarrelsome, sullen; at times there is heat in the face; red pimples on the face. If this remedy is not sufficient, give *Chamomilla*.

Chamomilla, when the patient has eaten or drank soon after great anger, and has a bitter taste in the mouth, bitter eructations, vomiting of green mucus or light colored bile; tossing about during sleep, frequent awaking, pain and fulness in the head, the face red and hot, the eyes red and burning, the disposition very sensitive. If it does not relieve, give *Pulsatilla*; if this also is insufficient, give *Nux vomica*.

Pulsatilla, when different kinds of meat or drinks, which do not agree with each other, have been taken at the same time, particularly such as produce flatulency; or when much fat has been eaten, especially that of pork or mutton, or sausages, anything fried in rancid butter, or pastry baked in mixed fat; particularly when the taste is bitter, salt, or resembles that of putrid meat or tallow; bread and all other kinds of food produce a bitter taste; distaste for tobacco; and also when there is accumulation of mucus in the mouth, a scratching in the throat, eructation tasting of bile, or a feeling of acidity and acridness in the stomach; a particular aversion to warm food, no thirst and particularly none for water; the abdomen is swollen, tense, particularly under the ribs, rolling and rumbling in the abdomen; slow, troublesome, small evacuations or diarrhoea; drawing in the limbs as from fever and ague; the patient feels chilly, weak, is cross, silent, annoyed at every trifle, cries easily, with little inclination to speak.

Cinchona is often most suitable when the air is infected with noxious vapors, in spring and autumn, when wet days are succeeded by dry weather; in countries where there are many canals, particularly if recently made, or where there is much drained land, or many fogs; also for persons who are obliged to work where they breathe noxious odors, and have not a sufficient supply of fresh air; it frequently cures the forerunners of fever and ague, and prevents the fever altogether. There is a constant feeling of having eaten to satiety, indifference to food and drink;

after eating, the food remains a long time in the stomach; constant eructations, the undigested food is frequently vomited; morbid craving for hearty, acrid or sour things; weakness of the body, and a disposition to lie down, without being able to remain quiet; the patient is obliged to bend and stretch his limbs, which are quite stiff in the morning; frequent flushes of heat; chilliness from every breath of air; the urine is dark colored and deposits a copious sediment; after lying down the patient finds it difficult to go to sleep, and is constantly disturbed; the disposition is melancholy and morose.

Antimonium crudum, when the patient feels sick at the stomach, the tongue is coated or blistered; frequent eructations which taste of the food last taken; the mouth feels dry, or the saliva flows from it: there is much thirst, particularly during the night; great desire for sour things; accumulation of mucus in the throat, or vomiting of mucus and bile, the stomach feels too full, or is sore when touched; there is besides flatulency and griping, or constipation and diarrhœa. The patient is very drowsy and could sleep all the time. If *Antimonium crudum* does not soon produce a favorable change, give *Bryonia*.

Bryonia, when the stomach is disordered, and the patient feels cold and chilly; the bowels constipated, the tongue coated white or yellow, or blistered as under *Antimonium crudum*. The same thirst, but it is continuous both by night and day; and more dryness in the throat and the stomach. It is most suitable in summer, or when the weather is warm and damp. Should *Bryonia* not help, give *Antimonium crudum*.

Cepa, no hunger but much thirst, particularly in the evening; the greatest nausea; many eructations which relieve a little, sometimes frothy mucus is raised; weakness in the stomach, as if empty, pressure therein, more when bending forwards; fulness in the head, much yawning; much flatulence, with pain in the bowels therefrom;

tongue always coated, particularly towards its base and early in the morning.

Ipecacuanha, when there is a catarrhal state of the stomach, or it is otherwise debilitated; when the tongue is not coated, although the patient is sick at the stomach and vomits; it is particularly indicated when there is loathing of food, of tobacco; for easy or violent vomiting; when the vomit contains mucus, especially when accompanied by diarrhœa; also when the complaint returns every day, or every other day, at the same hour.

Hepar, when the stomach is easily disordered, notwithstanding a regular mode of living is followed, or when this occurs despite the utmost care, and frequently with craving for acids, hearty, acrid articles, or for wine; when accompanied by nausea, inclination to vomit, and eructations, principally in the morning; at times sour or bilious vomiting and throwing up of mucus; accumulation of phlegm in the throat, pain in bowels, and hard, dry stools. It will be particularly useful for weak stomach produced by taking blue pills, or other preparations of mercury.

Lachesis in cases where *Hepar* has been insufficient, and when the complaint is worse immediately after meals, or early in the morning; when several days pass without any evacuation.

Tedious cases of dyspepsia may sometimes be cured by *Sulphur*—taken at very long intervals. When improving, the patient should wait, until the symptoms remain stationary or are decidedly worse again, before repeating it. If it fails to effect a cure after a considerable time, give *Calcareæ* or *Mercurius*, and afterwards *Sulphur* may act more favorably again.

CATARRH OF THE STOMACH.

This malady is characterized by weakness of the stomach, attended with accumulation of mucus in the mouth and throat, or with the throwing up

of mucus. In other respects the symptoms resemble those of "Dyspepsia," with the exception that the taste is more insipid or sweetish. Before eating the patients are usually very weak and miserable, and after eating they feel full and uneasy.

In the treatment of this complaint, *Ipecacuanha* should be first given, and then if necessary one of the following remedies:

Rheum, if, in addition to the above symptoms, there is diarrhœa of a thin, brown, slimy character, which smells sour or musty.

Veratrum, when the symptoms are violent and accompanied by vomiting of bile, or bilious diarrhœa, etc.

Capsicum, if accompanied by burning in the throat or stomach, or in the anus during the evacuations.

Consult also the symptoms of *Pulsatilla* and *Hepar* in last chapter.

Persons afflicted with this affection should take cold water freely, six to twelve glasses every day, and gargle the throat each time.

HEARTBURN. WATERBRASH.

Heartburn consists of a hot sensation felt principally in the pit of the stomach, and followed after a time by sour, or acrid eructations or risings.

It is frequently connected with dyspepsia and other affections of the stomach, and may be cured by the remedies recommended for these complaints.

Nux vomica often helps, or if the symptom comes especially after eating, *Cinchona*; if this remedy does not help, give *Carbo vegetabilis*; when neither *Nux vomica*, *Chamomilla* or *Pulsatilla* relieve, give *Capsicum*.

When caused by smoking, *Staphisagria*; if attended by much thirst, *Belladonna*. For fuller indications, however, see "Dyspepsia," "Cramps of the Stomach," and "Flatulency."

When these remedies are ineffectual in pregnant women, a slice of lemon sugared and kept in the mouth is beneficial. Sometimes drinking sugar-water every morning, and freely of cold water will remove it, although it may make it worse in the beginning. Care should be taken not to use any soda or potash, as these often produce dangerous maladies; also to avoid chalk, magnesia, prepared oyster shells, etc.

NAUSEA AND VOMITING.

It is very important that the possible cause should always be taken into consideration, and the remedies be selected accordingly. Very frequently the symptoms disappear of themselves after vomiting, therefore it may be promoted by giving tepid water, tickling the throat with a feather, or by giving coffee without milk. No powerful emetics should be taken; they always weaken the stomach.

Give, when the tongue is thickly coated white or yellow, *Antimonium crudum*, or, when the tongue is clean or slightly coated, *Ipecacuanha*. If the edges of the tongue are red, tip red, or small red spots on it, give *Antimonium tartaricum*. Sometimes nausea and vomiting are caused by fright, grief, vexation, by taking cold, overheating, sitting up at night, overloading the stomach, drinking intoxicating liquors or chamomile tea, smoking, or by using rhubarb and other so-called medicines, or from other poisons. Having ascertained the causes, look under their respective heads.

When nausea and vomiting are caused by a fall on the head, give *Arnica*; when by some foreign body in the throat, see under that head.

When connected with giddiness or headache, see Chapter I., Part II. ("Headache"); when the medicines recommended in such cases do not give relief, give *Lachesis*, and afterwards if necessary, *Belladonna*. For vomiting, with cough, *Ipecacuanha*, *Mercurius*, *Capsicum*, *Pulsatilla*, *Bryonia*, *Cinchona*, *Drosera*, *Phosphoric acid*, *Sulphur*, *Calcarea*, or *Lachesis*. The particular symptoms for the choice of each will be found under "Cough" or "Whooping Cough."

When caused by riding, give *Cocculus*, or see "Seasickness."

For vomiting during pregnancy, see under that head.

Vomiting from weakness of the stomach, occurring after every meal, is often cured by *Pulsatilla* or *Nux vomica*, and sometimes *Bryonia*. *Pulsatilla* will be beneficial when the

stomach is so weak that only very little food can be taken at a time, and the least surfeit causes vomiting with spasm and cutting pain in the bowels, or giddiness and vomiting of white, tough mucus, diarrhœa, weakness of the limbs, and sometimes fainting. *Cocculus*, for the same symptoms as the above, when that is insufficient, followed, if necessary, by *Nux vomica* and afterwards *Bryonia*.

Cinchona or *Ferrum* may be in some cases necessary to complete the cure, or *Sulphur*, followed by *Arsenicum* or *Hyoscyamus*, may be required in some severe cases which the foregoing remedies have failed to relieve.

Calcareæ will be serviceable in protracted, chronic cases, especially after *Sulphur*.

In vomiting of blood when it is very dark, give *Ipecacuanha*, or, if not better soon, *Hamamelis*; and if this is insufficient, give *Arnica*, and send for a physician as soon as possible.

For vomiting in children, caused by worms, see "Complaints caused by Worms."

If a person vomits all he has eaten after every meal, and if this continues until he has become quite thin, he ought to eat light and nourishing food, very little at a time, but often. If he has much pain before throwing up, he ought to eat not more than one tablespoonful every hour. At first, rich milk, cream, gruel, arrow-root or starch, better with sugar than with salt; afterwards, now and then, good broth or beef essence. This will be nourishment enough while the medicines have time to act.

Give *Hyoscyamus* for pulsating in the pit of the stomach; *Arsenicum* for burning; *Ferrum* for pressure; *Carbo vegetabilis* for pressing outwards; *Calcareæ* for stinging.

It is still better to consult a physician.

SEA-SICKNESS.

Opium has given the quickest relief, and may be repeated whenever the symptoms increase. In some cases *Cocculus* is better. *Petroleum* is always to be given if *Cocculus* does not relieve. *Nux vomica* will often be of service,

especially if the stomach was disordered before going on board, or is so by the manner of living on board ship. Owing to the differences in the constitutions of persons they are differently affected by the motion of the ship, some becoming easily accustomed to it, others with greater difficulty, and others again, not at all. Hence the remedies must be adapted to the constitutional peculiarities from which the sickness arises.

Some persons are benefited by drinking brandy and water, and others by eating raw ham highly peppered. In most cases benefit will be derived by taking as much exercise as possible, forcing one's self to eat, and placing blotting paper soaked in rum, brandy, or whisky, on the pit of the stomach. In cases of severe headache with desire for sour, hearty food, give Sepia.

PAIN, CRAMP OR SPASM OF THE STOMACH.

The following remedies may be tried, and will sometimes alleviate the complaint. From time to time a tablespoonful of milk may be swallowed; and the region of the stomach rubbed with warm olive or linseed oil. Some are relieved by swallowing a spoonful of linseed oil. Sometimes relief is obtained by taking weak chicken broth, sometimes from the application to the region of the stomach of a sheet of blotting paper wet with rum. The same persons, however, will find great relief from taking *Nux vomica*, if they will only refrain from the use of ardent spirits and coffee, and even avoid smelling them. A few handfuls of common, roasted oatmeal may be placed warm upon the stomach in a small bag—the meal must not be quite as brown as coffee. This is very useful when the patient has before taken opium or laudanum, and, as usual, the complaint has been thereby aggravated.

Nux vomica helps coffee or brandy drinkers, when they abstain from taking these drinks; the pain in the stomach is contracting, or pressing, the clothes seem too tight, or there appears to be a collection of wind on the left side under the ribs, worse after eating, after rising early, sometimes disturbing the patient in his sleep. These pains are

sometimes accompanied by oppression of the chest, as if a band encircled it; sometimes it extends to the back between the shoulders and to the small of the back. The pains are frequently attended by nausea or accumulation of water in the mouth; or sour, bitter, burning fluid rises in the throat; vomiting of food; sour, putrid taste in the mouth; flatulency; distension of the abdomen, and constipation. Sometimes it is accompanied by one-sided headache, pressing pain in the forehead, or palpitation of the heart and anxiety. If *Nux vomica* produces but temporary improvement, and the complaint returns again in a few days, a dose of *Pulsatilla*, *Chamomilla*, or *Ignatia*—whichever seems best adapted to the symptoms—must be given. If after this the symptoms return, *Nux vomica* may be repeated again, but if this is not sufficient, *Carbo vegetabilis* may be given.

If drinking coffee aggravates the complaint, *Nux vomica* will be the proper remedy; if the pain is relieved by it, *Chamomilla*.

Chamomilla will also be indicated when there is a pressure in the stomach as from a stone; when the pit of the stomach and the parts immediately under the ribs on the left side are so distended as to cause great anxiety and shortness of breath. The symptoms are worse during the night; the patient is extremely uneasy and agitated, tosses about in the bed, and sweats profusely; sometimes he is troubled with a throbbing pain on top of the head which drives him out of bed. The pain in the stomach is somewhat alleviated when he draws himself up, and lies perfectly quiet. When the pains are very violent, give *Coffea*, and afterwards, if necessary, *Chamomilla*. If *Chamomilla* is of but little use, give *Belladonna*.

Cramp of the stomach during menstruation can generally be cured by *Nux vomica* or afterwards by *Chamomilla*; but if the discharge is very scanty, *Pulsatilla* or *Cocculus*.

Cocculus is indicated when *Nux vomica* gives some re-

lief, but the pain returns very soon, and is accompanied by hard evacuations, or no movement of the bowels; when the pain in the stomach is accompanied by a pressing, contracting pain extending over the abdomen, alleviated by the discharge of wind; when there is some sickness of the stomach, and collection of water in the mouth without heartburn; when the patient is not irritable, angry, or violent (in which case you would give *Nux vomica*), but rather sullen and taciturn.

Aconite for violent pain; the pit of the stomach being distended and very sensitive to pressure, even to the touch; vomiting all the food taken, at last empty retching; coated tongue, the edges or tip red; the abdomen hot; feet cold.

Belladonna, when *Aconite* gives only partial relief, especially in women and persons who are delicate and sensitive; when there is a gnawing pressure or a spasmodic tension of the stomach which obliges the patient to lean back or to hold his breath, by which the pain is also mitigated; when the pain always returns after dinner; when it is so violent as to deprive the patient of consciousness, or make him faint. It is mostly accompanied by thirst, and drinking increases the pain; evacuations tardy and small; the patient cannot sleep at night. Should the suffering grow worse after this, with great thirst, the tip of the tongue being dry, give *Rhus*; should this also fail, give *Arsenicum*.

Bryonia for the same kind of pressure as *Chamomilla*, particularly when it commences during meals, or immediately afterwards, and the pit and region of the stomach feel as if swollen; sometimes the pressure changes to a contracting, pinching or cutting pain, which is relieved by pressing upon the stomach, or by eructations of wind; the pains are aggravated by motion (the opposite in *Cinchona*). These symptoms are attended with constipation, and a pressure in the temples, the forehead or back part of the head, as if the bones of the head were being forced

asunder, which is better when pressed hard or tied tight with a handkerchief.

Pulsatilla, when the pains are of a piercing character; are worse when walking, particularly on making a false step, and always accompanied by nausea or vomiting; the evacuations loose; no thirst, except during the most violent pains; also when there is great tension of the stomach, with pinching pain, or violent throbbing, with anxiety; griping pain, diminished by eating, or the symptoms are made worse by eating; the pain being pressing and pinching. This remedy is most suitable for persons of a mild, gentle disposition, or if cake or rich, fat food was the cause.

Nux moschata, pressure in the stomach, which feels full and distended; a feeling of satiety after eating only a little; after eating, feels very bad and uncomfortable, short of breath; headache after eating too much; headache always after breakfast or immediately after eating and drinking, cramp and pain in the bowels; offensive breath, white-coated tongue; the patient likes to sit in the house and feels drowsy from it.

Ignatia, when *Pulsatilla* is insufficient and the complaints continue for several days; the pains resemble those of *Nux vomica*, but are without the hard stools and with less vomiting; also when there is pressure in the upper part of the stomach after every meal, or in the lower part of the throat. It is suitable in cases brought on by insufficient food or starvation. It is particularly indicated when the stomach feels as if it was hanging on a thread.

Cinchona for spasm of the stomach in debilitated persons, brought on by using emetics or cathartics, being bled or cupped frequently, or by profuse loss of blood in any way, or by salivation or loss of fluids by other means. It is of the first importance in pain occurring in women who are nursing, or who are debilitated by nursing their children too long; or from excessive secretion and flow

of milk. *Belladonna* will follow it in these cases advantageously. *Cinchona* must, therefore, be given first, when women have spasm of the stomach from nursing, particularly when much milk runs away (here *Belladonna* is to be given afterwards), or when they continue nursing too long, that is, more than nine months; in the latter case the child ought to be weaned. Generally, when the digestion is not good, with too great a secretion of mucus, and acidity in the stomach; when the stomach feels sore; when meat and drink cause pressure and inflation of the stomach, and if the pains are worse when the patient is at rest, and better when in motion, *Cinchona* will be the best remedy.

Carbo vegetabilis, particularly when *Nux vomica* has proved useful, but only for a short time; when there is a burning pain, or constant, painful, anxious pressure, worse when touched; or with a contracting, spasmodic sensation, forcing the patient to bend, taking away his breath, and aggravated by lying down. Frequently accompanied by heartburn and nausea; loathing at the very thought of food; constipation.

Calcareæ, in chronic cases, or when *Belladonna* has been of temporary benefit; for oppressive, cutting, contractive, spasmodic, pinching, choking pains, with a feeling of anxiety; worse after eating; frequently attended by vomiting of food, and worse at night; with pain from external pressure; it is particularly suitable for women whose monthly sicknesses are, or have been, too early and very copious; or for those who bleed much from the nose.

Phosphorus for violent pressure in the stomach, sometimes worse when empty, and sometimes worse after eating.

Causticum for pains in the stomach after swallowing food or drink which was too hot.

Inflammation of stomach—see “Inflammation of Abdomen.”

CHAPTER X.

AFFECTIONS OF THE ABDOMEN.

COLIC.

It may be excited by acid fruits and indigestible food; by catching cold from changes of weather, wet feet, exposure, etc.; also by drinking cold water or other cold beverages when heated; by worms; by the action of lead on the body, as met with frequently in painters, plumbers, and other workmen who come in contact with lead; also in persons who have drunk wine adulterated with metallic poisons, or who are in the habit of using water which flows through leaden pipes. See Part I, Chapters VI, VII and VIII, on the treatment of those injured by lead or paints, etc.

It may be necessary to consult "Colic" in Part I, and also "Spasms of the Stomach," in the preceding chapter.

Chamomilla is suitable for children, also for grown persons when, besides the symptoms given under the head of "Pain in the Bowels," in Part I, blue circles appear around the eyes; when there is much saliva in the mouth, tearing pain around the navel, and a feeling in the small of the back as if it were broken; if *Chamomilla* does not answer, give *Pulsatilla*. *Chamomilla* is also suitable for wind pent up in different parts of the abdomen, with a sensation as if it were going to escape there; stitches through the chest; distention under the ribs and in the pit of the stomach; great agitation, uneasiness, and clammy perspiration; rattling and rumbling in the abdomen; frequent inclination to stool, with small, slimy, watery evacuations; after violent indignation; if it is not sufficient, give *Colocynth*.

Nux vomica, when there is constipation or difficult evacuations, a sensation as of a weight in the abdomen, with rolling and grumbling, and great heat; the pains are pinching, drawing, compressing, as if the intestines were pressed here and there by stones; oppression in the pit of the stomach; the abdomen is painful when touched and

tense; the breath short and difficult—a general feeling of fulness, the parts under the ribs feel as if stuffed; during the most violent paroxysms of pain, the hands and feet are cold; sometimes the patient is deprived of consciousness; pain and flatulency deeply seated in the abdomen; a strong pressure on the bladder and rectum as from a blunt knife, as if the wind must escape there; the pain makes the patient double himself up, and is worse at every step. (See *Belladonna*.) Better when at rest, when sitting and lying. Generally attended by violent headache and pain in the small of the back. A number of these symptoms are attributed by ignorant persons to some obstruction, which they think must be removed by aperient medicines. Refer also to “Constipation.”

Mercurius, for violent, twisting colic; the region around the navel is hard; jerking pain externally in the walls of the abdomen, which is inflated and hard; crawling in the throat, hiccoughing, voracious appetite, aversion to sweets; nausea, with water rising in the throat, straining evacuations, or tension and burning around the navel, increased flow of saliva, eructations, diarrhœa, evacuation of slime, great debility; worst attacks of colic about midnight—if *Mercurius* does not quickly relieve the patient, and the above symptoms are attended with itching of the nose, give *Cina*; if this does not affect a complete cure, *Sulphur*.

Pulsatilla, when there is stinging pain in the bowels, with throbbing in the pit of the stomach, a disagreeable tightness in the back part of the abdomen, as if it were too full; growling and rumbling; the wind cannot be got rid of; warmth and distension of the abdomen, which makes the patient feel anxious; general heat, the veins on the hands and forehead are swelled, the patient is forced to take off his clothes on account of the heat and tightness, the abdomen is painful when touched, as if bruised; all the symptoms are worse when lying down, somewhat better when walking about; when rising, the small of the

back aches as if bruised; also, with the pinching, cutting pains, worse on being touched; tearing and shooting above the navel; uneasiness, heaviness in the belly, with painful tension, when touched it aches; qualmishness; white, frothy saliva in the mouth; diarrhœa; yellow, gray evacuations, with violent pains in the stomach; pale face, blue circles around the eyes (see *Chamomilla*); contractions of the whole body (see *Nux vomica*, *Belladonna*, *Colocynthis*, *Pulsatilla*); pressing, tensive headache. When caused by an overloaded stomach, first give coffee without milk, and afterwards, if necessary, *Pulsatilla*; if that does not cure the complaint, give *Belladonna*.

Aconitum, in cases like the last mentioned, when in addition the bladder is affected, the patient has violent pains in the region of the bladder, with spasmodic pains, drawing inwards, and a constant inclination to make water—the urine, however, does not pass; these symptoms are accompanied by nervousness and uneasiness, and the abdomen is excessively sensitive. Afterwards, if necessary, give *Nux vomica* or *Cepa*.

† *Colocynthis* is the principal remedy for colic. It is to be given when the pains are very violent, constant, or only cease for a short time, and then recommence with greater violence; when the most violent pain is confined to a small spot about the navel, and returns periodically every five or ten minutes (see *Belladonna*); or when it commences on the side with a slight drawing pain, tending towards the centre, which increases gradually, and at last changes to a jamming, pressing, or boring and tearing pain, so violent, that the patient cries and shrieks aloud, twists about like a worm, is covered with perspiration, presses the abdomen with his hands, pushes furiously against the bed-posts or corners of the tables, etc., lies on his face and places pillows under himself, and tries every way to get some ease.

Persons who have previously suffered from these attacks

for several days, or periodically, and have taken laudanum, which causes the attacks to return the sooner, may, when they feel the least symptoms of an attack, take *Colocynthis*; it is also most suitable when former attacks have weakened the intestines, which feel as if every part were bruised, and hanging on threads, which might break at every step. In all such cases *Colocynthis* is a certain remedy and its use should be persisted in. If the first dose does not give immediate relief, and if the complaint gets worse, give coffee without milk, a teaspoonful at a time, which may be repeated as long as it alleviates the pain; if it grows worse again, give another dose of *Colocynthis*, alternating it with the coffee, until the pain ceases. If, after taking one dose of *Colocynthis*, the pain increases no longer, but there is a slow improvement, dispense entirely with the coffee, and let the medicine act as long as there is any improvement, or until the disease is cured. The second dose is generally sufficient, almost always the third; in the worst cases, I never found it necessary to give more. For any of the remaining symptoms, give *Causticum*.

When the patient has taken laudanum, a drug most injurious in this complaint, although very commonly taken, give coffee first and then *Colocynthis*. If that does not answer, try *Staphysagria*, and then again *Colocynthis*. There are, however, some cases of violent colic which *Colocynthis* will not cure, and in which one of the following remedies, particularly *Belladonna*, must be given.

Belladonna, when, during the pain, a thick, sausage-like swelling protrudes across the abdomen, and when bending over, or pressing upon it gives some relief; when the pain is griping and bearing down, as if the intestines were about falling out; the symptoms getting worse when the patient is up and walking about; particularly when the stools are thin and pus-like. In the latter case, *Mercurius* frequently removes the remaining symptoms. *Belladonna* suits, generally, when the face becomes very red, the blood

rushes into the head, the veins are swelled, and the pains so violent that the patient is almost distracted. Also, for pains below the navel, when there is griping, as if produced by taking hold of the parts with the finger nails, and when it is accompanied by pains in the small of the back.

Cocculus for pains similar to those described under *Nuxvomica*, particularly when there is a contraction in the abdomen with a downward and outward pressure, attended with some nausea; or when wind passes without relief, because more is constantly accumulating and is lodged in different places causing pain (see *Chamomilla*); or there is a large accumulation of flatus in the stomach and intestines, causing great distention of the upper part of the abdomen, and pain with noise and pinching in the stomach, and with anxiety and pressure under the ribs, all of which symptoms disappear as soon as the wind passes upwards.

Cepa for the most violent colic either after catching cold, particularly from wet feet, or from eating cucumbers, salads, or from eating too much; commencing in the region of the liver and extending through the whole abdomen, most painful about the navel; getting worse when sitting; better when walking about, particularly if this causes the passing of foetid flatus, with much rumbling; worse after eating and drinking, particularly after coffee; but for this remedy the pain must always be worst on the left side or there must be a pressure in the region of the bladder, with much urging to pass water and to go to stool, with emission of foetid flatus.

Cinchona is suitable for flatulent colic, resembling that described under *Chamomilla* and *Cocculus*; but when the intestines are first contracted in the lower part of the abdomen, and press outward with oppressive and tensive pain, with tension under the short ribs, and agitation; particularly in the night; in debilitated persons, or after profuse sweats, or in women who are nursing.

Ignatia frequently relieves colic which awakens the patient out of sleep; when there are shooting pains, which extend into the chest and sides, when the wind is discharged with much difficulty, after which the pains moderate; it is suitable for sensitive females. When the colic commences in the evening, and the flatulency causes nausea and vomiting, *Pulsatilla* is better.

Colic, preceded by a bitter taste, a yellowish, coated tongue, much thirst, which, as the saying is, is caused by bile, attended sometimes by vomiting of bile, or bilious evacuations, may generally be cured by *Chamomilla*; or in bad cases by *Colocynthis*, and when these remedies do not suffice, by *Sulphur*.

FLATULENCY.

Flatulency, or a collection of wind in the intestines, often causes colic, the remedies for which have already been mentioned. If the wind does not pass at all, and the abdomen becomes swollen as if it would burst, give *Carbo vegetabilis*. When it does not cause violent pain, but heat, uneasiness, and inflation of the abdomen, interfering with the breathing, which is frequently the case after taking flatulent food, beer, etc., or from drinking water after eating fat meat, give *Cinchona*, and afterwards, if required, to choleric persons, *Nux vomica*; to quiet, mild-tempered persons, *Pulsatilla*, if *Cinchona* does not give relief. If there is a collection of wind which distends the entire abdomen, and rumbling pains, worse on the left side, also in the left groin, as if a rupture were strangulated there, give *Cepa*. If it returns often, give *Lycopodium*, and if this is not sufficient, *Sulphur*; should this also fail, consult a homœopathic practitioner.

INFLAMMATION OF THE STOMACH AND BOWELS.

The treatment of these diseases by domestic remedies, and that of the old school physicians are alike injurious. It is impossible to provide here for all cases, but it will always be better to go by the rules here laid down, than to resort to violent treatment. If a homœopathic practitioner can be had, it is always better to consult him.

An inflammation of this kind may be supposed to exist, when a burning, sometimes a stinging or tearing pain is felt in any part of the abdomen, which is very tender when pressed upon, and aches at every motion or movement, such as coughing, sneezing, laughing, etc. The part is sometimes tense and swollen; when it is near the chest, it produces difficulty of breathing, particularly of inspiration; it is mostly accompanied by vomiting or by eructation, which gives no relief, also by constipation. The latter symptom induces many persons to take aperient medicines, which, in this affection, are absolute poisons; the former, to take emetics, which may cause death. The abdomen should be left perfectly undisturbed; the drink should be water, and from time to time some mucilaginous articles and milk—nothing else whatever; the constipation will last until the inflammation is removed. When the patients are recovering, and begin to eat, the evacuations will recommence of their own accord. In the most dangerous cases, where no evacuation of the bowels took place for fifteen days, the patients recovered notwithstanding, and regained their strength rapidly.

Besides the above symptoms, there are in some cases the following; the face is pale, grayish, sunken; there is violent fever, but a weak pulse, the mind very much dejected and agitated. When the disease is at its height, the vomiting and the pains are both very violent, the patient is exceedingly weak; the extremities cold, hiccough sets in, and the abdomen is greatly distended, and extremely sensitive.

When the disease attacks the *stomach*, the pain is generally in the pit of the stomach, extending under the ribs and towards the back, or through the abdomen; eating and drinking are immediately succeeded by vomiting; with violent thirst, there is sometimes an aversion to water. When the seat of the disease is in any other part of the abdomen the pain is felt there and the abdomen is hot, the vomiting does not take place for some time after eating or drinking; the abdomen is swollen and tender, the patient complains of intense burning heat, in the whole or some part of it. There is also usually great thirst, constipation, etc.

Aconitum will in most cases be required at the commencement. It may be repeated every hour, until there is some improvement, or until an aggravation of the symptoms renders the selection of one of the following remedies necessary.

Ipecacuanha, when the pains are worse in the front part of the abdomen, and extend to the left side under the ribs whence they spread along the ribs towards the back or the abdomen, with swelling in the region of the stomach, great agitation, and much vomiting, after which he feels worse rather than better.

Antimonium crudum will be preferable to *Ipecacuanha* if the tongue is covered with a white or yellowish coating.

Pulsatilla, or *Nux vomica*, if the disease was produced by a disordered stomach.

Bryonia, after *Aconitum* or *Ipecacuanha*, when the pain and fever are very violent, and the complaint has been caused by taking cold, particularly by drinking cold water when the patient was overheated; when it is no longer efficacious, give *Nux vomica*. When the patient seems stupefied, or speaks disconnectedly, or is not aware how ill he is, give *Hyoscyamus*; if it does not give relief, give *Belladonna*. If the extremities become cold, and the patient is evidently sinking, the face becoming very pale, or otherwise much altered, give *Veratrum*; if this proves unavailing, *Arsenicum*. After *Arsenicum*, *Aconitum* may in many cases be given and then *Arsenicum* once more, giving them in this manner alternately. If *Arsenicum* makes the complaint worse, give *Nux vomica*.

When the pain is worse on the left side, under the ribs, whence it extends downward, there is generally in the beginning, vomiting of blood. If the fever is violent, give *Aconite*, but do not wait until it is much worse, give *Cinchona* and whenever the pain increases give another dose of it. This will relieve in the majority of cases.

Arnica may be given for the above symptoms if *Aconitum* and *Cinchona* are insufficient, and the pains are more of a pressing or shooting character, and render the breathing difficult and painful—also when the attacks resemble more those of typhus fever—the patient, quite indifferent, dull and stupid, is insensible to his suffering.

and insists that there is nothing the matter with him. *Nux vomica* may be given with advantage after the above remedies, when the disease has continued for some time, without much improvement, and there is a dull pressure on the stomach with constipation. *Bryonia*, in cases where there are acute pains in the stomach and abdomen, increased by the least motion; and constipation.

Arsenicum, when there is diarrhœa, with a discharge of much blood, without alleviating the pains; or when they are violent and burning, and the patient is very weak. When the disease assumes a periodic character, is worse every other day, give *Cinchona*.

When the pain is more under the ribs, on the right side, toward the front, extending up or down, give one of the following remedies:

Chamomilla, if the pains are dull, and not increased by external pressure, nor by turning or inspiration, and when there is pressure on the stomach, tension under the ribs, difficulty of breathing, a yellow tongue, bitter taste, yellowish skin and paroxysms of anxiety and agitation; when these paroxysms become more frequent, principally during the night, and are attended with green, slimy diarrhœa and sickness of the stomach, give *Pulsatilla*; if, on the contrary, the bowels are constipated, the skin less yellow, but the chest more affected, give *Bryonia*.

Mercurius for pressing pain, which does not allow the patient to lie on the right side, with bitter taste in the mouth, more thirst than hunger, constant chilliness, very yellow skin and eyes; sometimes it may be alternated with *Belladonna*, or, in critical cases, with *Lachesis*.

Belladonna for pressing pains which extend to the chest and shoulders; when the pit of the stomach is distended, with tension above the navel and across the abdomen; difficulty of breathing and nervousness, attended by determination of blood to the head, with dimness before the eyes, and giddiness almost to fainting, frequently accom-

panied by violent thirst, uneasy tossing about, and sleeplessness. If no improvement follows its use during twenty-four hours, give *Lachesis*, and repeat it as often as the complaint gets worse; when *Lachesis* ceases to act favorably, give *Belladonna* again, or select another remedy.

Nux vomica for acute pain, sometimes attended with throbbing and stitches, the part affected being very sensitive to the touch; sour or bitter taste; nausea or vomiting; oppression and shortness of breath, as if the clothes were too tight, while the removal of them rather aggravates the sensation than otherwise; thirst, red urine, oppressive headache.

Sulphur may be given after *Nux vomica*, if there should be but little or no improvement from the latter—and the stinging pains continue. And also after the other remedies recommended when they afford no immediate, or only partial relief. If the disease is worse every other day, give *Cinchona*, as prescribed for pains in the left side.

When the pain is more in the abdomen, in the middle or lower part, and is aggravated by motion or pressure, and the most painful part is distended, give *Aconitum*. If this gives no relief, and the abdomen continues to be sensitive to the touch, give *Lachesis*; if this fails, give *Belladonna*. In some cases, *Hyoscyamus*, *Bryonia*, *Nux vomica*, *Arsenicum*, and sometimes *Mercurius* may do good—the latter particularly after *Lachesis*. Refer to what has been previously said of these medicines in this chapter.

All aperients ought to be carefully avoided in this complaint, though it is mostly attended by obstinate constipation—the less this is interfered with the sooner will the patient be restored to perfect health; if he takes cathartics or emetics, he may die in consequence, or they may produce a chronic malady which is difficult to cure. In this complaint it is, therefore, a good sign when the bowels are constipated, and a very bad sign when the evacuations become thin, and still worse when they pass involun-

tarily. Even in this dangerous stage of the disease, *Hyo-cyamus* may sometimes save the patient.

Children are frequently subject to attacks of this kind; when the pit of the stomach and the parts under the ribs become distended by pain in the abdomen, give *Chamomilla* or *Mercurius*. See also "Diseases of Children."

DETERMINATION OF BLOOD TO THE ABDOMEN.

This affection consists of a troublesome sensation of heat and burning in the abdomen, attended with hardness, tension, dull pain, and symptoms as if arising from a surfeit, without any excess having been committed. Hypochondriacs, persons who are of sedentary habits, or those who have the piles, are most liable to it. The principal remedy is *Sulphur*. If, however, it is accompanied by pains in the small of the back, as if it would break, with a feeling of great weakness in that region, rendering it almost impossible to walk, *Nux vomica* will be preferable. If accompanied by diarrhœa with small, soft, slimy or watery evacuations, *Capsicum* should be given; or, if attended with diarrhœa and great prostration of strength, *Arsenicum*. In addition to the above, the following remedies may be serviceable: *Belladonna*, *Veratrum*, *Pulsatilla*, *Bryonia*, *Chamomilla*, *Rhus*. See also "Piles."

WORMS.

Many complaints are ascribed to worms which arise from very different causes. When children have been fed upon pap, cakes, and similar articles of a hurtful nature, or when the mother, whilst nursing, overloads her stomach with meat, fish, salted and fat things, particularly with pies, the children must necessarily become sick in consequence, or a predisposition to sickness be induced. If the children are kept too warm, get little outdoor air, and, besides this, are dosed with vermifuges, injections, purgatives, etc., the worms cannot fail to prosper and increase.

When children are supposed to have worms, the first thing to be looked to is a rational mode of living, by which means the worms will soon di-

minish, and if symptoms of the complaint remain, the remedies will afterwards prove the more effective. Most persons are by far too much afraid of these little creatures, which are not nearly so noxious as the remedies usually prescribed for them, and particularly as the nostrums advertised in the newspapers. Simple persons believe in these things, and pay for the trash, when, if they knew what they or their children were swallowing, they would rather pay twice as much to keep it out of the house, to say nothing of their bodies.

It is true, these things sometimes kill the worms, but too frequently they kill the children also, or affect the abdomen in such a manner that the consequences appear many years after. First, it is to be considered that almost all children have worms, sometimes before they are born, and that it is frequently a sign of a dangerous disease when these worms pass off spontaneously; secondly, that what these worms subsist upon in the body is more hurtful than the worms themselves. Almost all the symptoms attributed to worms may arise from some general disease in the system, which has a tendency to increase them, especially if aided by an unwise mode of living. When the worms have become very numerous they give rise to various complaints, which, joined to the symptoms of the original malady, sometimes become dangerous. When the worms are expelled, the symptoms which they gave rise to, of course disappear, but the real disease may increase.

Sometimes diseases subsequently make their appearance which are worse than the first, although slower in their operation, and perhaps not manifesting themselves until the tenth or twelfth year. Expelling the worms is of no essential use. The remedies here prescribed will frequently cure the disease itself, and if there are really too many worms, which is but rarely the case, will remove them also. Children who have worms should have enough to eat, but not too much bread, very little salt, and few or no cakes or pies, but in preference a good deal of ripe, cooked or dried fruits, and in particular, carrots.

When you are not certain of the existence of worms, and the child becomes emaciated, and vomits frequently, give first *Ipecacuanha*; but when the tongue is coated, *Carbo vegetabilis*; if this has no effect, *Pulsatilla*; if the child has been much troubled with diarrhœa, or has taken much aperient medicine, give *Cinchona*; when the bowels are constipated, *Nux vomica*.

When the child passes worms occasionally, picks its nose much, and the belly is distended, give *Cina*, which is one of the chief remedies for all complaints really arising from worms.

For colic, caused by worms, with frequent inclination to vomit, when much water collects in the mouth, and the parts around the navel are hard, also when the whole abdomen is hard and distended, with frequent ineffectual straining to evacuate, or secretion of nothing but slime, give first *Aconitum*, some hours later, *Cina*; and if this is not sufficient, *Mercurius*. In all complaints caused by worms, *Aconitum* is of great use in the beginning, and if this and the other remedies mentioned above do not remove them, *Sulphur* should be given, and will be found to be of great value, particularly after *Mercurius*. These remedies will generally effect a cure. In rare cases, attended with much thirst, sudden starting and fright, *Belladonna* may be required. In very bad cases it may also be necessary to give *Lachesis*.

Persons troubled with *tape worm*, discharge joints of this worm from time to time: these pieces are nearly square, quite flat, about as broad as the little finger. There is no sure sign of the existence of tape worms, except the discharge of pieces of this description, which generally pass away about the new and full moon.

Tape worms may frequently be destroyed by taking, when the moon is waning, two mornings successively, a dose of *Sulphur*, and at the next full moon, *Mercurius*, in the same way, and eight days after, *Sulphur* again twice; repeat these remedies in the same order several times. Sometimes the tape worm is discharged after taking a few doses of *Calcareæ*. If this treatment does not effect a cure, apply to a homœopathic physician.

For *ascarides*, the small worms which are found in the anus, see "Itching of the Anus."

ITCHING OF THE ANUS.

This troublesome affection may generally be cured by one or more of the following remedies:

Nux vomica will be applicable when the itching is seated either internally or externally, is worse when sitting or moving, and also after taking stimulating food and drinks, and is accompanied with pains, or dry piles, or moist and bleeding piles, or costiveness; also when caused by strong liquors, beer or coffee; or in people who lead a sedentary life; in pregnant females; when caused by little worms, which may upon looking be discovered moving about within the sphincter

Aconitum, if the itching arises from small worms, and *Nux vomica* is inefficient, and children are very uneasy during the night, and have fever. It should be given in the evening, or during the night, and, if ineffectual, followed by *Ignatia* in the morning. If the children are again troubled in this way, particularly after every full and new moon, give, when the moon is full, *Sulphur*, and *Silicea* when it is new. If the complaint should return at the next full moon, give *Calcareæ*. Let the children eat no pork, very little salt, and as little pastry and few cakes as possible. If there should be no relief, notwithstanding the use of the above medicines, give *Ferrum*; if diarrhœa makes its appearance, dispense with the medicine, and if the diarrhœa still continues, give *Cinchona*.

While children are taking the above remedies (*Sulphur*, *Calcareæ*, *Silicea* and *Ferrum*), nothing else is to be given, unless it be a dose or two of *Aconitum*, to remove any febrile symptoms that may arise.

The itching may be allayed by rubbing the parts with sweet oil, or injecting it, or by introducing a piece of bacon, about the size of a finger, attached to a string, into the anus; allowing it to remain there for ten or fifteen minutes, and then removing it.

Injections of cold water every evening are also serviceable in many cases. Applications of this kind do not disturb the operation of the remedies. When, however, all these means prove abortive, which may be the case with some children, in whom it is hereditary, try small injections of weak salt water, and if these fail, or cause diarrhœa, weak injections of water and vinegar. Lemon juice has often proved efficacious in allaying the itching, by applying it once or twice a day.

When the itching is caused by piles, swollen, red or bluish tumors at the anus, give the following remedies:

Nux vomica, if, besides the itching, there is a burning and pricking sensation, the anus so contracted that the natural evacuations are effected with much difficulty, accompanied by dull shooting pains and jerking in the small of the back and around the anus, when moving; pain in the small of the back as from a bruise, which makes the patient cry out, and bend forward when walking or sitting. Sometimes *Ignatia* will be better, according to the temperament of the patient. Compare "Head-ache," etc.

Sulphur when, in addition to the itching, there is burning, pain and soreness in and around the anus, with stitches; the tumors are moist; with a sensation of fullness and heaviness, and sometimes protrusion (prolapsus) of the anus; constant straining to evacuate, or thin diarrhoea mixed with blood, with violent stinging pains in the small of the back; stiffness in the small of the back, or feeling of contraction. Should it grow worse after *Sulphur*, give *Aconitum*, and should that also fail, let the patient smell camphor.

Apis for the worst kind of itching of the piles, for piercing, burning and soreness.

PROLAPSUS ANI. PROLAPSUS OF THE RECTUM.

This is a protruding or turning inside out of the large intestine; it occurs either every time the bowels are moved, or only when that is preceded or accompanied by much straining, or it takes place in sitting or walking. The intestine returns to its natural place when quietly lying down or it can be returned by the hand. To return the prolapsus, place the patient on his knees, separate the parts and put wet rags on the protruding intestine. If cold water pains, use warm water. If it does not now return by itself, take a very soft sponge, wrap it in a soft cloth, wet it, and press it on the protruding part slowly and steadily. Be in no hurry and be sure to make the pressure in the right direction. A very slow movement takes place in the intestine, alternately from above down and from downwards up, and

only during the latter motion will it return. If it has not returned after about ten minutes and is cool and flabby, try to push it back with your fingers, which must be previously oiled or greased, and have no long or sharp nails. If it becomes red, swollen and inflamed do not try to return it, but put upon it cloths dipped in cold water and give the following medicines: to children, particularly when cutting teeth, who cry much and strain hard: *Ignatia* or *Nux vomica* according to their dispositions. If the intestine is much swollen, or is bluish-red, or bleeds and pains much when at stool, *Mercurius*, the next day *Ignatia*; if the trouble remains after dysentery, *Ruta*; if it protrudes when walking and looks bluish-red, *Arnica*; for whitish-red swelling around the anus with much itching, *Apis*. In chronic cases in children, *Calcaria* is preferable. For grown persons if worse when walking, *Sepia*.

HEMORRHOIDS, OR PILES.

This is a disease which consists principally in the discharge of small quantities of blood at the anus every four or six weeks, preceded by more or less indisposition, and followed by a feeling of great relief. Very often other and more dangerous diseases are prevented by this complaint.

Frequently the symptoms which precede the discharge, are very troublesome. Sometimes the discharge ceases in part or entirely, at others again so much blood is discharged that it becomes alarming; tumors are frequently formed in the anus, which become very painful, particularly when no blood is discharged.

Not unfrequently after a sudden suppression of piles a disease of a more dangerous character appears in their stead. For all these symptoms, medicines should be taken, and the manner of living be such as to prevent the disease from assuming a more serious character. The patient should not sit much, particularly not on very soft cushions, except during the time the tumors protrude. He must avoid all ardent spirits, strong beer and coffee; drink water freely, eat little meat and take plenty of exercise.

The doctors of the old school rely almost entirely on operative means for the treatment of this affection.

Homœopathic practitioners, however, possess medicines by which they cure these tumors without operating at all; but the more frequently the patient has been operated on, the more difficult it is to cure him, as the disease has thereby become much more obstinate.

Washing the parts with cold water, and injections of half a pint of cold water, once or twice a day, are beneficial when the piles do not bleed; when they bleed, these means should not be resorted to, as they may suppress the discharge. When they bleed too copiously, the water may, perhaps, be applied, without, however, neglecting to take the medicines recommended.

Great care must be taken also in giving the injections; the water must not be too cold, the point of the syringe should be of wood, ivory, bone or vulcanized India rubber, not too thin, and widening towards the end, which ought to be nearly as thick as the point of the little finger; before introducing it, it should be first covered with fresh sweet oil, or with beef or mutton suet; introduce the pipe by slowly and gently turning it.

The cut represents the nozzle in natural size.

a. The opening; it must be perfectly smooth. b. Screw to fit into a flexible tube. d. Part around which the anus closes.

Between the nozzle and the body of the syringe there should be a flexible piece. It is much better to use instead of the ordinary syringes, which have done a great deal of injury, a bulb syringe of soft rubber, or a fountain syringe.

When the tumors at the anus are too painful to allow of injections, apply a sponge which has been dipped in cold water. Moistening the tumors with saliva is very useful, but this must not be done immediately after meals, nor after smoking tobacco; persons who chew tobacco, or who have ulcers in the mouth should not try it. When the tumors do not bleed at all, and are very painful, and when they get worse again in a short time after applying cold water, put some boiling water, or water in which wheat bran is boiled, into a close stool-pan, and sit over the steam. Sometimes mucilaginous substances are useful, particularly an emulsion of quinces, made of quince-seed soaked in water.

The following medicines are, however, chiefly to be depended upon. When there is intense itching in the anus, see under "Itching in the Anus." If the piles are accompanied by colicky pains, give the remedies recommended for "Colic," the principal among which are: *Pulsatilla*, *Nux vomica* and *Colocynthis*. *Pulsatilla* mostly for females; *Nux vomica* more frequently for persons who drink ardent spirits and are of sedentary habits; *Colocynthis*, when the pain is very severe. Refer also to "Determination of Blood to the Abdomen."

Aconitum frequently gives relief when blood is discharged, and there are shooting pains and pressure on the anus, the abdomen feels too full, with tension, pressure and griping; the small of the back feels as if broken or bruised.

Nux vomica when there is a burning, pricking pain in the tumors, the symptoms resembling those mentioned under "Itching of the Anus;" when there is much light colored blood discharged after each evacuation, or when

1292

there is a constant disposition to evacuate; also in constipation, and during pregnancy; particularly for irritable, passionate persons who feel worst in the morning. To persons of a sullen, quick disposition, give *Ignatia*, and afterwards, if the complaint returns again, *Sulphur*.

Apis for small, very painful, stinging, biting, or itching tumors, or larger ones with burning and soreness; or swelling of the whole anus with beating, heat and fulness there; particularly if a dark bloody fluid exudes; suitable for irritable, restless persons who are easily excited, dejected and anxious, or disagreeable, easily offended, passionate and easily vexed.

Pulsatilla when blood and mucus are discharged with the fæces, with painful pressure on the tumors; pains in the back, pale countenance, disposition to faint. If it is insufficient, *Mercurius*, and afterwards *Sulphur*, may help in these cases. Still oftener when there is much urging, straining, *Sepia*.

Capsicum answers best when the tumors are much swollen, the blood discharged with burning pains, and mixed with slime; also when there is a drawing pain in the back, particularly in the small of the back, and cutting pains in the bowels.

Ignatia for violent stitches which penetrate deeply, with itching and crawling in the anus, when much blood is discharged, or the rectum protrudes considerably at each evacuation; or when after an evacuation there is painful soreness and contraction, particularly when accompanied by ineffectual straining to evacuate, or a discharge of bloody mucus.

Chamomilla is most appropriate when the blood flows freely, with contracting pains in the abdomen, frequent straining to evacuate; occasional diarrhœa, particularly when attended with smarting and burning, with tearing pain in the small of the back, especially at night.

Antimonium crudum is frequently of service when mu-

cus is discharged from the anus, which stains the linen; when with the discharge of mucus there is burning pain, *Carbo vegetabilis* is still better, particularly when accompanied by bleeding of the nose, and great determination of blood towards the head.

Carbo vegetabilis when much mucus is discharged, or mucus and blood, with much burning in the anus; everything sours on the stomach; the patient is much troubled with wind, which is lodged in different parts of the belly, or becomes very weak; if it proves insufficient, it should be followed by *Arsenicum*.

Sulphur is one of the principal remedies as well for bleeding as for blind piles; it is particularly suitable when there is constant ineffectual inclination to stool, or thin evacuations mixed with blood; when there is an acute, sore pain in the anus, internally and externally; when the tumors burn, are moist, protrude considerably, and can scarcely be replaced; with violent shooting pains in the back, and in the small of the back; stiffness in the small of the back, with a feeling of contraction; also, with smarting pain on passing water.

Lycopodium very often when *Sulphur* is insufficient; when the piles always return after constipation; the patient is much troubled by wind and has much pain under the short ribs.

Belladonna for bleeding piles, with intense pain in the small of the back, as if it were breaking; if it proves insufficient, give *Hepar*, and if this does not effect a complete cure, four or five days later, *Rhus*.

When the discharge is excessive, the blood is bright red and the patient is much debilitated by it, if *Aconite* or *Ipecacuanha* do not relieve soon enough, take *Calcarea*; if even this is insufficient, *Belladonna*. When after any one of these medicines the discharge abates somewhat, take nothing more unless it grows worse; then take the same medicine again, and when this loses its effect, take

another. If the patient is very weak, let him take *Cinchona* in the interval.

The above remedies are only for cases of exigency, though sometimes they will radically cure this tedious complaint; if they do not, apply to a homœopathic practitioner, or send him an exact description of all the symptoms present.

DIARRHŒA.

This complaint frequently arises from causes pointed out in the first part of this work—for instance, from *sudden fright*, from *fear*, from *vexation*, from *taking cold*, from *heat*, from a *disordered stomach*, or after *burns or scalds*.

Most persons are to this day impressed with the erroneous idea that diarrhœa is a cleansing process, necessary for the recovery of the patient. It is true, that some diseases terminate in a diarrhœa, but it is also true that diarrhœa is the commencement of other diseases, and must always be considered a morbid state of the functions.

The deceptive sensation of relief and weakness after purging or artificial diarrhœa, is, by many persons, looked upon as healthy and necessary, merely because they have previously been in a different and opposite state of disease. Thus many consider the excitement consequent upon drinking brandy or strong beer as healthy, because they feel uncomfortable without it, whereas they are, in reality, in a more unhealthy condition, whilst they imagine themselves better.

Persons who think that they cannot remain in good health without aperient medicines or artificial diarrhœa, should, when they feel constipated, try first the medicines pointed out under constipation, and they will find that the latter frequently cure without causing any diarrhœa. Those who have a natural or artificial diarrhœa, however, should not stop it by artificial means, such as wine, brandy, and the like, but should let it take its course, and use those medicines which will effect a cure in a natural manner. Astringents are not always dangerous, but are very frequently so, particularly to children and aged persons, or to individuals who are suffering from another complaint.

When the consequences of suppressed diarrhœa make their appearance, they are called dyspepsia, liver complaint, etc., and the worst of it is, that they cannot be so easily removed. To believe, however, that suppressing the diarrhœa is only dangerous because it prevents impurities from escaping, is also a mistaken idea. Suppressing a diarrhœa is dangerous, because it is changing one disease into another—and because we cannot know what that second disease will be; generally, it is a worse one. Most of these im-

purities exist only in the imagination; as to the artificial production of such impurities, refer to what is said under "Constipation." If, however, there are real impurities in the body, they will be discharged much sooner with the natural exertions than during a diarrhoea, which, in fact, always leaves impurities behind, and which the natural exertions afterwards have to carry off. When the evacuation is hard, nothing can remain in the intestines; a fact so evident that every one can understand it. The intestines are a tube, which is first narrow and widens gradually. It is not like the hose of a fire engine, where it is necessary to apply pressure at one end in order to force out the contents at the other; it is not a dead tube but a living one, which is in constant activity; this activity, when regular, allows nothing to remain in it—only when it is irregular, or when it ceases, can this be the case. In diarrhoea, particularly when produced by aperient medicines, this action is very irregular and hurried, in the attempt to rid the body of the poisonous purgatives—which, when accomplished, leaves the intestines, of course, very weak and relaxed. If the purgative was no poison, it would not purge at all, for only those things will purge, which the body cannot bear and therefore ejects. The poisonous effects of these medicines become most evident when they remain in the body; for when the body has not the power to reject them, they show their whole force as a poison. You will be told that it is the disease which produces these symptoms, but do not believe it—it is false. More persons die of drastic purgatives, and more children of rhubarb than of arsenic, of which every one is afraid. With costive evacuations the action of the intestines is greater, or the excrements could not be ejected—and, consequently nothing can remain behind—for the hard excrements always fill the intestines completely—which is never the case in diarrhoea. When the action of the intestines stops, it is true, the contents remain stationary; but it can easily be excited again, as has been shown under "Constipation."

When loose evacuations relieve a patient who is suffering from some complaint or other, wait awhile before you give medicine—and, only in case it continues, or is accompanied by other symptoms, make a selection from among the following remedies.

If children, while teething, have diarrhoea, do not interfere with it immediately, but wait a day or two if they have no other symptoms requiring treatment. At the commencement of a diarrhoea, all acids, coffee, tea, and everything salt should be avoided; fruit, fresh and dried, eggs, chickens and other poultry, particularly also veal, are injurious; nothing but mucilaginous food is to be taken—arrow-root, rice, sago, etc. If the appetite is good, the patient may take mutton-broth, thickened with wheaten or rice flour, or sago; milk, fresh from the cow, may in some cases make the diarrhoea worse, it is better to have it boiled and taken warm, but it must not be boiled too long, which will make it hard to digest.

Ipecacuanha is indicated in diarrhœa, attended, in children, by screaming, tossing, uneasiness, and distension of the abdomen; frequent small yellow stools, with pains in the rectum—or thin, mucous, frothy evacuations like yeast, of a very offensive smell, or first watery then slimy and yellow, or green preceded by rumbling and cutting pain; sometimes ineffectual straining; accompanied by weakness, an inclination to lie down, drowsiness, a pale face, blue rings around the eyes, coldness and irritability, easily vexed and enraged. When *Ipecacuanha* does not answer, or affords only partial relief, give *Rheum*; when the secretions smell sour, it is better to give the latter medicine at first.

Chamomilla, particularly for children when they cry and are uneasy, want to be carried constantly; or for older children, when they are irritable, cry as if crazed, and twist and writhe; when infants draw up their legs; when the belly is tight and hard—the evacuations very frequent and mostly slimy or watery, or green and brown, or of undigested matter which smells like rotten eggs; accompanied by rumbling in the bowels, loss of appetite, thirst, coated tongue, frequent eructations and retching. *Chamomilla* is appropriate also for grown persons, particularly when the evacuations are green, watery, hot and offensive, with bitter taste in the mouth, bitter eructations, bilious vomiting, fulness of the pit of the stomach, griping and headache. The more bile is got rid of either by vomiting or diarrhœa the better.

Pulsatilla for pap-like or watery and offensive diarrhœa, with burning pain and soreness of the anus: accompanied by loathing, nausea, disagreeable eructations and griping. All other symptoms worse in the evening but the diarrhœa worse in the morning; accompanied by painful urging to urinate, particularly if the patients are very sleepy and chilly, or if it was brought on by rich food. For gentle, patient persons, particularly women or children, when

with the former the menstruation is easily suppressed by it. For pap-like diarrhœa, only occurring after midnight, preceded by pain in the bowels, which ceases after an evacuation, give *Rhus*. *Pulsatilla* is also useful in slimy diarrhœa, when each stool is of a different color. If the diarrhœa occasions great weakness, give *Colocynthis*, and if this causes disagreeable symptoms, give a little coffee without milk. If the slime is green, or mixed with blood, attended with straining, give *Mercurius*.

Mercurius for diarrhœa attended by fits of screaming and by writhing, with ineffectual urging and pressing; cold perspiration and trembling; the discharge green, watery and mucous, sometimes bilious, or mixed with blood, accompanied by great exhaustion, fetid, nauseating breath, loss of appetite, and a disposition to vomit, or vomiting and diarrhœa at the same time; also for acrid diarrhœa with burning and itching in the anus.

Sulphur for green, slimy diarrhœa which is so acrid as to occasion soreness of the parts around the anus, or to produce miliary eruptions; frequently accompanied by emaciation, or, in children, by a hard, distended abdomen; when every fresh exposure renews the diarrhœa. Also if the diarrhœa begins after midnight accompanied by cramps in the calves of the legs. It will be serviceable after the failure of other remedies.

Antimonium crudum for watery diarrhœa with disordered stomach, and whitish, thickly coated tongue. When there is, besides soreness of the anus, spasmodic pains in the anus and back; food of every kind causes pressure in the stomach; dulness of the eyes; sallow and pale face, give *Ferrum*, which may also be given in diarrhœas without pain. For watery diarrhœa which has continued for a long time, other remedies having proved ineffectual, give *Phosphoric acid*.

Veratrum for watery diarrhœa, bellyache with an anxious feeling in the region of the stomach; pain about the

navel with anxiety; sometimes sour vomiting, much thirst for very cold water or something sour; or chilliness and drawing pains in the calves of the legs.

Rheum for sour, thin, slimy, fermented diarrhœa (compare with *Ipecacuanha*), common with children, who cry from pain in the bowels, or are uneasy and draw up the legs, and if you see a twitching in the upper part of their thighs or groins—flow of saliva from the mouth, and pale face (if it is red, give *Chamomilla*, and if this does not answer, *Belladonna*); sometimes there is a sourish smell proceeding from the whole body of the child, which washing will not remove; if, in such cases, *Rheum* does not give relief, and the pain is very violent, give *Chamomilla*, and if this does not suffice—the pain abating but the weakness continuing, with distension of the abdomen, *Sulphur*.

Apis for greenish-yellow, watery, slimy, painless diarrhœa, particularly in the morning, or if the abdomen is so sensitive that it cannot bear the bed-cover. Especially for irritable persons, who find fault with everything, for fickle children who drop and break everything, and become dejected and weak.

Cinchona will be serviceable in all kinds of diarrhœa occurring in debilitated persons, and also in other cases, when, during the most violent pains—which are spasmodic, contracting and oppressive—quantities of thin, brownish matter are discharged, sometimes accompanied by burning pains in the anus, with great weakness in the abdomen, rumbling, flatulency and eructations. Frequently, when after taking cold persons awake during the night with these spasmodic pains, it gives instant relief, and prevents diarrhœa.

Bryonia often answers in the heat of summer, particularly in diarrhœa arising from drinking cold water, or from taking cold; or when the diarrhœa is caused by eating too much fruit, or by eating too much in general; likewise, when the diarrhœa occurs immediately after meals;

is occasioned by sour-kROUT; also when produced by vexation, and *Chamomilla* has failed to cure it.

Nux moschata, after taking cold in water or from wet feet, for such as easily catch cold, and who have a cool, sensitive skin; for slimy stools, or like chopped eggs; no appetite; white-coated tongue; offensive breath; or thin evacuations, accompanied with much straining; or involuntary; constant pains below the ribs, moving from right to left; or the abdomen distended by wind; after eating and drinking, pains in the bowels or headache.

Dulcamara for diarrhœa which is caused by taking cold, particularly in summer and autumn—worse at night, frequent evacuations, which are rather watery, attended by no great pain or by colic; if this does not give relief in six hours, give *Bryonia*. If attended with more weakness than pain—if it comes on immediately after meals, the food being passed undigested, *Cinchona* generally gives relief; sometimes *Bryonia* or *Rheum*—to which refer; when attended with great weakness and pain in the bowels, give *Arsenicum*, and if this does not soon give relief, *Nux vomica*. When the food passes undigested, *Ferrum* is frequently useful, or *Cinchona*, or *Calcareæ*; sometimes *Mercurius*. For diarrhœa attended by great weakness, mostly *Ipecacuanha*, *Veratrum* or *Arsenicum*; for diarrhœa without any pain, *Ferrum* is best. When diarrhœa and constipation come on alternately, which is frequently the case in aged people, *Antimonium crudum* answers best.

For children, particularly while teething, *Calcareæ* is best, when the heat in the bowels continues, the stools are watery, pale yellow or sour. If the discharge continues very painful, or becomes green, and there is much rumbling in the bowels, give *Phosphorus*.

For diarrhœa in females during pregnancy, and in confinements, refer to "Diseases of Women;" and for diarrhœa with children during summer, to "Summer Complaint," among "Diseases of Children."

DYSENTERY.

The chief symptoms of dysentery are: a constant straining and desire for a passage, with cutting pains in the bowels; small stools of whitish or bloody *mucus*, but *no real fæces* are discharged. The constant straining and desire for a stool are caused by inflammation of the large intestine, and not by the presence of fæces as in a healthy person; this disease is *not*, as commonly believed, *diarrhœa*, but *just the reverse, it is constipation*. The re-appearance of fæces in the stools is a sign that the patient is better.

Dysentery attacks, generally, a great many people at the same place, and if the right remedy is found in one case, it may be given in all other cases, as in all other epidemics. The homœopathic physicians should in every epidemic try to find the right remedy, and make it public.

If in such an epidemic you once have a patient in your house, there will soon be more from the use of the same privy. The surest, easiest and cheapest way of disinfecting is by a solution of copperas (sulphate of iron), one part of copperas to twenty parts of water; some of this solution should be mixed with all the discharges of the patient, and a quart or two of it poured every few days into the privy.

Dysentery is most frequent when the days are hot and the nights cool, at such times be particularly careful not to take cold when you are heated, by cold drinks, a draught, taking off a part of your clothing, or sitting down upon the ground or a stone. Use no unripe fruit, spoilt malt liquor, sour wine, mineral water, lemonade, especially not at night.

Sometimes there is at first common *diarrhœa*, for which you should select a remedy from those recommended under "*Diarrhœa*," but more particularly, *Veratrum*, *Pulsatilla* or *Nux moschata*. Avoid all fruit, salads, sour things, cabbage, beans, peas and the like; eat only farinaceous food, bread and the like, soup without any seasoning, but a little salt; no eggs. See "*Diarrhœa*."

At other times dysentery is preceded by *other complaints*, for which a remedy has to be selected from those recommended under their different heads.

Aconitum for heat and thirst; the patient of a full habit, pulse strong and fast, face hot and red, more so at night. Pain in the bowels, accompanied with anxious desire to pass water, urine hot and brown-red; dry mouth or cold in the head.

For constipation preceding dysentery, compare *Nux vomica*, *Bryonia*, *Platinum*; or *Mercurius*, *Staphisagria*, *Natrum muriaticum*.

Nux vomica, if the patients are worse in the morning, before or while rising, or the pain is worse in the stomach than the abdomen. For persons who have been in the habit of drinking much coffee or spirituous liquors, but have now a marked aversion to these things, do not delay to give *Nux vomica*, or, according to the symptoms, *Chamomilla*.

The patient may drink as much cold water as he likes, and nothing else but gruel and other farinaceous articles. When he is recovering he should eat the same things, with some mutton or beef-broth, but should eat often and not much at a time.

Mercurius when there is an urgent desire to evacuate, as if the intestines were being pressed out; after much straining, a discharge of light blood or greenish, broken-up looking matter mixed with blood, and more straining after the evacuation than before; in children accompanied with crying and screaming; infants thus affected, refuse to take the breast. If there is very much straining before and during stool, but marked relief afterward, give *Nux vomica*.

Mercurius sublimatus in the fall if, with severe colicky pains, first much bile is discharged, then blood or slime, or bright colored blood alone or nothing but slime. When it no longer relieves give another remedy; compare particularly what is said of *Colocynthis* here under "Colic," "Diarrhœa."

Aconitum is particularly valuable in dysenteries occurring in autumn—when the days are hot and the nights cold; after violent chill, great heat and thirst, red face; if it is insufficient, compare what is said under *Bryonia*, *Nux vomica* or *Mercurius*, one of which will often suit the case. When there is rending in the limbs, head, nape of the neck and shoulders, give *Aconitum*; if, after several doses, it proves insufficient, give *Chamomilla*, in some cases also *Pulsatilla*. If the discharge is mostly slime streaked with blood, give *Rhus*, to which refer under "Diarrhœa."

Belladonna when *Aconitum*, which seemed to suit, does no good, particularly for lively, restless persons, or children who cry easily, or women who are easily frightened; if the patients on awaking from sleep talk at random; if every moment they want to get out of bed or into another one; especially if the tongue is dry and red at the point (compare *Rhus*), or if it has two white stripes and is red all around and in the middle.

Chamomilla, if there is fever and thirst with rheumatic pains, especially in the head; nausea, coated tongue, bitter taste, etc.; and particularly if the disease was produced by a sudden check of perspiration; and is accompanied by great agitation and tossing about.

Cinchona, for epidemic and periodic dysentery, which affects many persons at the same time in a marshy region, or where canals are being dug; particularly when the complaint is worse every other day; or if the patients have a soreness below the ribs, particularly on the left side, with fulness; in general for weak, pale persons.

Veratrum, if the discharge is watery, with bloody mucus and flakes swimming in it, or perhaps with sour vomiting; great thirst; severe cutting pains in the bowels; if the water passes very seldom; face pale, sunken, anxious; coldness, or sensation of coldness; great weakness; drawing in the calves of the legs.

Arsenicum for the same great weakness; when the dark, slimy and bloody evacuations have a putrid smell, when they pass involuntarily, when the urine becomes offensive, the patient becomes quite indifferent, as if stunned, with a bad smell from the mouth; when here and there red or blue spots appear; also, when the patient tosses about in great agony; is unable to find rest, believes he is dying, etc.; when, at the same time, the breath is very cool, or when he complains of burning; when *Arsenicum* proves ineffectual, give *Carbo vegetabilis*. When, after *Carbo vegetabilis*, the putrid smell remains, give *Cinchona*; and afterwards again, *Carbo vegetabilis*. *Carbo vegetabilis* and *Arsenicum* are both suitable if the dysentery has been brought on by cold drinks, particularly ice-water. For those who are in the habit of using spirituous liquors or who are fond of cakes, rich food and milk, *Carbo vegetabilis* is better. If caused by spoiled beer or fruit, *Arsenicum*.

Colocynthis for extreme pain in the bowels, as if the intestines were jammed between stones; the patients double

themselves up and are very restless; the discharge is slimy, sometimes mixed with blood, the abdomen much distended, sometimes like a drum; pressure as if the belly was full; shuddering, commencing in the abdomen and extending over the whole body; the tongue covered with white mucus; likewise, if brought on by anger and mortification. Refer also to "Colic."

Staphisagria, in similar cases, when the pains are renewed by every mouthful of food and drink, even of water, and if there is afterwards straining and pressing. It is sometimes useful in alternation with *Colocynthis*. If both of them do good only for a short time, give *Causticum*.

Rhus, after a heavy cold, particularly after getting wet all over, in a rain or otherwise, whilst in a perspiration; especially if the discharge is bloody, slimy, brownish or greenish, and swims upon the water (compare *Cinchona* and *Mercurius*); or for such as have from the first an eruption out on the lips (compare *Arsenicum*).

Sulphur should be given in all protracted cases, when the other remedies give relief, but do not effect a complete cure: if there is still much urging and ineffectual straining; if the patient has an aversion to bread, meat, milk, sweet and sour things, malt-liquors and wine, and wants nothing but thin soup and brandy.

COMMON CHOLERA. CHOLERA MORBUS.

This disease is characterized by violent purging and vomiting, griping, thirst, and sometimes by cramps and coldness of the extremities.

It is most generally preceded by shivering, headache, nausea, pain in the abdomen, etc. In some cases, however, violent vomiting and purging set in almost simultaneously. In severe cases, there is considerable pain in the abdomen, violent cramps in the muscles of the limbs, paleness of the surface, pinched features, sunken eyes, cold and clammy skin, and great anxiety and depression.

Attacks frequently come on at night, and by morning the patient may have almost or entirely recovered.

The exciting causes are chiefly improper quantity or quality of food—

cucumbers, for instance, or any unripe fruits or crude vegetables—changes of temperature, great fatigue, ice or iced water, etc.

Ipecacuanha, if the attacks of vomiting predominate. *Nux vomica*, after *Ipecacuanha*, when there is anxiety, pain in the abdomen, frequent small evacuations and tenesmus, and headache.

Veratrum, should the disease grow worse, and assume the following characteristics: violent vomiting with severe diarrhœa, excessive weakness, and cramps in the calves of the legs; eyes hollow or sunken, countenance pale, and expressive of acute suffering; coldness of the extremities, cold clammy perspiration, violent pain in the region of the navel, tenderness of the abdomen when touched; pains and cramps in the fingers, shrivelled appearance of the skin on the palms of the hands.

Arsenicum is useful when the disease is attended with rapid prostration of strength, insatiable thirst, excessive anxiety, with fear of approaching death, burning sensation in the region of the stomach, almost constant discharge from the bowels, or renewal of the discharge on every occasion that the desire for drink is gratified; suppression of urine or scanty discharge followed by a burning sensation; violent and painful vomiting, tongue and lips dry, cracked and bluish, or black; hollow cheeks, pointed nose, pulse almost imperceptible, or small, weak, intermittent, and trembling; severe spasms in the fingers and toes; clammy perspiration.

Cinchona is useful for the weakness which remains after cholera, but is also occasionally of benefit during the course of the disease, particularly when there is vomiting of food, and frequent watery and brownish evacuations containing particles of undigested food; also when there is oppression at the chest with eructations, which afford temporary relief; severe pressure in the abdomen, especially after partaking of the smallest portion of food; great exhaustion, sometimes amounting to fainting.

This remedy is particularly indicated when the disease has been excited by indigestible substances, such as unripe fruit, etc., or by inhabiting a marshy situation.

Cuprum, in cases with violent cramps in the extremities, especially in the calves of the legs, fingers and toes; it is useful also when the evacuations are very frequent and whitish, with violent pains in the abdomen, bluish appearance of the skin, etc.

ASIATIC (OR EPIDEMIC) CHOLERA.

During an epidemic of cholera, the doctors tell the people: "Do not be afraid; though, in spite of all we can do for you, you will get the cholera and will most likely die, yet, do not be afraid, for fear makes it certainly worse." But I say: Be afraid! a little fear is wholesome, it will make you careful. He who is afraid and lives reasonably will not easily be attacked, or only slightly, and he who is not afraid, and lives unreasonably, is more likely to get it; but he may be saved.

The surest preventative is *Sulphur*; put half a teaspoonful of *Milk of Sulphur* into each of your stockings and go about your business; never go out with an empty stomach, eat no fresh bread, nor sour food. This is not only a preventative in cholera, but also in many other epidemic diseases. *Not one of the many thousands who have followed this, my advice, have been attacked by cholera.*

At the beginning, when you have diarrhœa, *Sulphur* will relieve you, take it at once, and if it must be repeated, dissolve a few globules of it in a tumblerful of water and take a spoonful after every evacuation. If you awake after midnight with violent diarrhœa, vomiting, cramps in the calves of the legs, paleness and coldness, take *Sulphur* and keep quiet, the next day eat nothing but stale bread, and you will soon be well.

This was confirmed in 1849 in more than five hundred

cases which came to my knowledge. In a few cases other remedies were necessary, and that only when the patient had violated the rules; but none died who took *Sulphur* from the first.

For sudden attacks, and in general in the commencement, if the disease rapidly becomes much worse, *Camphor Tincture* is the best remedy. If the patient is attacked with cramps, nausea, excessive prostration, coldness and blueness of the surface, give him a drop of it every fifteen, ten or five minutes until he begins to perspire. This remedy was discovered and first made known to the world by Hahnemann; it has since become a popular remedy in all countries, and has saved the lives of hundreds of thousands. Do not take too much of it, and not for every trilling diarrhœa.

For attacks of real cholera: *Camphor*, as stated above; or *Arsenicum*, when the purging and vomiting become very frequent; the evacuations from the bowels being thin, watery, and of a brownish or blackish color and putrid smell, or light colored and almost without smell, especially when accompanied by intense, burning pains or cramps in the stomach and bowels, with violent thirst, and great prostration of strength; also burning in the anus and rectum with tenesmus. It is also worthy of attention in the last stage of the disease.

Veratrum is, however, the remedy upon which the chief reliance is to be placed, when cholera is fully developed; the discharges almost constant and presenting the characteristic rice-water appearance, with cramps in the calves of the legs, fingers, toes, and sometimes of the muscles of the abdomen and chest; the patient excessively restless and anxious; the extremities cold, etc.

Cuprum, after *Veratrum*, when that remedy has failed to relieve the cramps, which are very violent and extend to the whole body, or ~~change~~ to spasms or convulsions, with constriction of the chest and difficult respiration.

Carbo vegetabilis may frequently be of service in the last stage of the disease, when the patient is in a state of collapse, or asphyxia; the pulse almost gone; the surface cold and bluish; the breath cold; or when the evacuations and cramps have ceased, and congestion to the chest takes place. If reaction should ensue after the administration of *Carbo vegetabilis*, and the purging, vomiting, and cramps return, it will be necessary to have recourse again to *Veratrum*, or some other of the foregoing medicines.

In the congestions which frequently follow cholera, that to the head will generally be relieved by *Aconitum*, *Belladonna* and *Opium*; that to the chest by *Phosphorus*, *Bryonia*, *Aconitum*, and other remedies recommended for "Congestion of the Chest," which see.

During the treatment of cholera the patient should be kept in a warm room, and the heat of the body kept up as much as possible by frictions with the hand previously dipped in flour to prevent abrasion of the skin. Warm oatmeal and bran applied to the limbs or over the whole body in suitable bags is also good, everything hot is very painful to the patient and of no use. To quench the violent thirst which generally accompanies the disease, small pieces of ice should be placed in the mouth from time to time; cold water, in small quantities, may also be allowed unless it be found to aggravate the disease.

If the patient gets better and wants to eat give him gruel and light food, often and only a little at a time. Eating as much as he wants may cost his life.

CONSTIPATION.

The first observation we have to make on this complaint, and which many will consider paradoxical, is, that every one whose bowels are constipated, may congratulate himself that he has no worse complaint. Whoever has paid attention to the subject, must be aware that nearly all persons who are disposed to costiveness, live long and keep their strength, except when they injure themselves by taking aperient medicines. Those, on the contrary, who are subject to frequent attacks of diarrhoea, are early in life debilitated and seldom grow old.

No diarrhoea can appear when there is not some poisonous, noxious matter, or morbid disposition in the body, while, on the other hand, much perspiration and the eating of animal food are sufficient to cause constipation. In regard to the notion of impurities remaining in the body, see what is said under "Diarrhoea." The very popular opinion that purging

contributes to health, not only when the body suffers from sickness, but also occasionally when it is in a healthy state, and that impurities are driven out of the body by it, is entirely erroneous and without foundation. It serves to keep up the sale of drugs, and it has been repeated year after year until it is almost universally received. It is a part of the traditional medical creed of the world, and no one dares to doubt it. When this erroneous method of treatment is prescribed with due confidence and solemnity, heart and purse (but not always the bowels) open, and persons actually in sound health feel a downright longing to be properly scrubbed and cleansed inside.

Every one who will make the following experiment upon a horse, or upon himself, will be convinced that our opposition to purging is well founded. Let aperient medicines be taken for a week, and however good may have been the state of health previously, at the termination of this period all sorts of impurities will be discharged, particularly after taking jalap and calomel. As this happens in every instance, either to man or beast, and even to those who have never been ill, it is a proof that these impurities have been artificially produced by drugs.

We are frequently able to judge from the nature of the secretion, what medicine has been administered. After salts, the evacuation always smells like rotten eggs; after drastic gums, they are thin and watery; after mercury, green; and after magnesia and rhubarb, generally offensive, etc. When we inquire into the causes which produce this purging, we find that almost all poisonous substances have a similar effect, and that for this reason we may class the purgatives with propriety among the poisons. Some esteem them a real godsend, and imagine that these drugs have been created for this very purpose. It might as well be supposed, that the rattlesnake and the tiger are created to destroy us.

But if we admit that these drugs are intended to be used as medicines, it is no reason, because we see them produced in great quantities, that we should make an excessive use of them. Virulent poisons, although given but in small portions, produce vomiting and purging, or injure the stomach; the less virulent poisons are called purgatives, merely because they do not kill immediately, but are generally rejected by the efforts of nature.

Persons suffering from constipation, and seeking occasionally to be relieved, or suffering from other complaints connected with it, should take the remedies hereinafter prescribed. At the same time attention should be paid to the manner of living; moderation in the use of meat, which must not be eaten three times a day, is to be observed; a free use of salted food is to be avoided, mastication attended to, or the food to be well cut up, if teeth have been lost; a considerable quantity of vegetables, fruit and bread to be taken with meat—soup may be indulged in; strong or green tea to be avoided, and also all spirituous liquors and beer which contain narcotics; in place of these new milk may be used, or even butter-milk, which, though it is generally despised and given to the pigs in this country, is nevertheless a wholesome beverage, both for children and grown persons.

Persons habitually constipated should also always, if it agrees with them, eat fruit at dinner, dried fruit in preference, or good ripe apples; they should avoid indulging in cheese, should not smoke before meals or abstain from it entirely, and accustom themselves to drink a glass of water before going to bed.

Among the domestic remedies nothing can be recommended, except from time to time an injection of water. Many persons are afraid if they get into the habit of using injections that they will be compelled to continue them; but there is no danger of this, if the medicines recommended are taken at the same time. The injections used should consist of nothing but water, and not be employed too frequently. To accustom oneself to purgatives is infinitely worse.

For other precautions in giving injections, refer to "Piles."

Injections, it is true, only relieve the patient for a while, but in the meantime the cause may be removed by medicine, and the disease cured. Persons who have suffered a long time from constipation, which constantly returns, may sometimes be cured entirely by injections. For this purpose let the water be as cold as it comes from the spring, about half a pint, or a coffee cup full at a time, and take the injection before going to bed at night. It should, if possible, be retained. Persons who continue this treatment for a week or two, frequently become quite regular in their bowels, if they live rationally at the same time. Those who suffer from piles must not have recourse to this remedy.

All other injections besides water and all admixtures are injurious, except fresh boiled milk, which is sometimes preferable for children.

Remember the rule: cold injections must be small, taken in the evening and if possible retained, or they will be of no use, since they are intended to strengthen; warm injections on the other hand are intended to soften and open, therefore must be plentiful and taken only in the morning, that is from three to four A.M. until noon, for that is the right time for a movement of the bowels.

Another remedy is plenty of exercise, walking, particularly up hill. Persons who are costive should be regular in attending to the calls of nature; the best time is in the morning, before or after breakfast.

The following medicines, when properly selected, will greatly facilitate the cure.

Nux vomica is most suitable for constipation occurring in persons of sedentary habits, and those accustomed to drinking ardent spirits; also for that which is occasioned by eating too great a variety of food at once; after a surfeit, or when the constipation is preceded by diarrhœa, or for suppressed diarrhœa, with want of appetite, disagreea-

ble taste, the tongue slimy, coated, loathing, sickness of the stomach, tenseness of the abdomen, pressure in that region, heat, stitches here and there, a feeling as of a weight, cutting pain in the lower part of the abdomen, heat particularly in the face, headache, disinclination to work, uneasy sleep, oppressed breathing, irritability and frequent complaining. When accompanied by moroseness, taciturnity, and after eating much cake, rancid butter, etc., give *Pulsatilla*; when the patient is irritable and feels chilly, *Bryonia*.

Bryonia is particularly useful in constipation occurring in warm weather, or if worse then, and in persons who suffer from rheumatism.

Opium when there is an inclination to evacuate, but a feeling as if the anus were closed; there is no regular pressure; sometimes a sensation as if there were a load in the abdomen; throbbing in the abdomen; pressure on the stomach; dry mouth, thirst, and want of appetite.

Platina when, after much straining, the fæces are evacuated in but small quantities; straining and itching at the anus; shuddering over the whole body after every evacuation, accompanied by a feeling of weakness in the abdomen, with contraction, bearing down, oppression of the stomach, and ineffectual efforts to belch wind; suitable also for constipation after or while travelling.

Lachesis for protracted costiveness, with a feeling of weight and oppression at the stomach, and ineffectual eructations.

Natrum muriaticum in tedious cases, where the above remedies have failed, and there is no inclination whatever to evacuate.

It will also be beneficial when the stools are scanty, hard and insufficient; when there is a constant feeling as if something were being pressed down in the large intestine, without regular urging to stool.

For frequent disposition to go to stool, with ineffectual efforts, give *Sulphur*.

INFLAMMATION OF THE LIVER. PAINS IN THE LIVER.

Pains below the ribs on the right side, extending up or down, with fever, require the following remedies:

Aconitum if the fever is high, with hot skin, much thirst, and whitish furred tongue, accompanied by moaning, great restlessness, and dread of death; shooting pains in the region of the liver.

Nux vomica for shooting or pulsative pains with great tenderness of the region of the liver when touched; nausea or vomiting; bitter or sour taste; shortness of breath and sense of pressure under the ribs and about the stomach; pressive pain in the head; thirst; highly colored urine; giddiness and paroxysms of anguish; constipation.

Mercurius, pains under the ribs of a pressive character, which do not allow the patient to lie long on the right side; bitter taste in the mouth; want of appetite; thirst, continued shivering, followed sometimes by clammy perspiration; yellowness of the skin and of the white of the eyes; also in enlargement and hardening of the liver. *Lachesis* is frequently suitable after *Mercurius*.

Belladonna for pains in the region of the liver which extend to the chest and shoulders, particularly of the right side; swelling and tenseness at the pit of the stomach; oppressed and anxious respiration; congestion to the head with giddiness; dimness of vision and occasional fainting; great thirst, anxiety, restlessness and sleeplessness. It is often suitable after *Aconitum*, *Mercurius* and *Lachesis*.

Lachesis will be serviceable in cases in which *Mercurius* and *Belladonna* appear to be indicated, but only afford partial relief; and also in obstinate chronic cases occurring in drunkards.

Bryonia, when the pains are pressive, with a feeling of

tension in the region of the liver; pains aggravated by respiration, coughing and movement; violent oppression of the chest, with rapid and anxious respiration; thick yellowish coating on the tongue; constipation.

Cinchona, when worse every other day, with shooting and pressive pains in the region of the liver; swelling and hardness below the ribs; pressive pain in the head; tongue thickly coated, yellowish, and bitter taste in the mouth.

Sulphur will be serviceable after any of the preceding remedies, when the improvement is but temporary and the disease still continues.

JAUNDICE.

There are different kinds of jaundice, sometimes it continues for a long time without any danger, sometimes it is accompanied by fever and in some cases it is a favorable sign, in other cases a dangerous sign, which can be readily seen by the general state of the patient.

There is commonly but little fever in the mild forms of this disease, but in bad cases the fever may be high, and the brain become more or less affected, which is always a serious complication, and especially so when drowsiness, with great difficulty in being roused, takes place; in such cases, if there was or is still a great itching, or frequent, violent gaping, give *Opium*.

Mercurius will be sufficient, if the patient has not already abused this drug; in that event *Cinchona* will be preferable, which may be followed, in obstinate cases, by *Hepar*, *Sulphur* or *Lachesis*.

Cinchona may advantageously follow *Mercurius*, when the latter remedy is insufficient.

Chamomilla will be preferable for attacks arising from a fit of passion. It may be followed by *Nux vomica*.

Sulphur and *Lachesis* will be most suitable for very irritable persons, in whom the symptoms of jaundice manifest themselves upon every trifling occasion.

Jaundice produced by abuse of mercury may be combated by *Cinchona* and *Hepar*, or *Lachesis* and *Sulphur*,—that arising from abuse of cinchona by *Mercurius*, *Belladonna*, *Calcarea*, *Nux vomica*; and that caused by rhu-
barb, by *Chamomilla* or *Mercurius*.

URINARY TROUBLES.

When anyone passes too much urine, too often, or it is abnormal, it should always be attended to, as it is very debilitating and often the beginning of a serious disease.

To children give *Rhus*, or, if they have much thirst, *Belladonna*; if the trouble is apt to return, if the children have perspired much on the head, give *Silicea*. If it returns after *Silicea*, give *Hepar*.

INVOLUNTARY EMISSION OF URINE.—Children are often troubled in this way when playing or running about, and when asleep, particularly at night. See "Treatment of Infants—Wetting the Bed."

It is also frequent in old age but occurs in all ages, particularly with women, then it is generally accompanied, however, by other symptoms, according to which the remedy must be chosen—for instance cough, then compare *Causticum*, *Natrum muriaticum*, *Antimonium crudum*, *Bryonia*, *Pulsatilla*, *Spongia*, *Staphisagria*, *Veratrum*.

If the urine escapes while passing wind, *Pulsatilla*. If it escapes quite involuntarily during the day, *Ferrum*; during the first sleep, *Sepia*.

DIFFICULTY AND PAIN IN MAKING WATER, may be caused by other diseases, by unclean affections, or by chronic affections of the kidneys or the bladder. In these last cases consult a homœopathic physician; if you cannot do so, use the remedies below.

It is strange to observe how anxious most people are about their having an evacuation from the bowels every day, without taking much notice of how often they pass water. Yet it is ten times more dangerous to go one day without urinating, than to be a whole week without a passage from the bowels. Never postpone the former business for any consideration whatever. Many people have died a very painful death from their having waited too long to urinate. It is astonishing how sensible people can run such a great risk on account of extreme modesty or bashfulness, while attending church, parties, especially sleighing parties, concerts, or other assemblies, and when traveling. Do not be in a hurry when urinating, do not strain too hard, empty the bladder completely, and avoid a cold draught.

Consider that the few moments which may be gained in this way are out of all proportion to the time lost during a long illness which may be caused by it. It is important to drink water often particularly when the urine becomes more scanty. Infants should not be forgotten or allowed to suffer from thirst from foolishly thinking that cold water will not agree with them.

If the discharge of urine becomes for some time more and more scanty, it is an indication of a disease which may suddenly become dangerous; take every day a warm foot-bath, drink plenty of water, and now and then

buttermilk; but beware of diuretics, such as gin, juniper berries, etc. For constant desire to urinate, pain, burning, etc., use applications of warm water, a warm bath and mucilaginous drinks, particularly oatmeal gruel, and partake of nothing acrid, salty or sour.

Aconite for the most common cases when there is painful urging; for children if they put their hands to the parts and scream, when no urine or very little passes, sometimes only single drops with great pain, the discharge is very red, dark and turbid, particularly for women and children. Should *Aconite* not relieve these symptoms, give *Cantharis*.

Pulsatilla, if there are pressing, cutting pains or redness and heat in the region of the bladder, especially for women, when the courses are suppressed, too tardy or scanty; also for less pain but much urging.

Arnica, if caused by a blow or fall on the bladder or back, or by a violent concussion of the whole body.

Nix vomica for persons of a full habit who are fond of liquor; after suppressed piles, with burning, pressing and tension in the back, and the region between the ribs and hip-bones.

Belladonna, if the pains are more piercing, extending from the back to the bladder, in spells, with great anxiety, restlessness and colic. If *Belladonna* gives only temporary relief, take *Hepar*.

Mercurius for very violent, constant desire to urinate, the stream being very small, with perspiration at the same time; urine dark red, soon becoming turbid and offensive.

If the urine is acrid, excoriating and if after its passage there is some blood, *Hepar*.

Colocynthis, if the urine becomes sticky and gelatinous, and the pains are insupportable.

Apis, if it appears after a partly or totally suppressed eruption, or there is a burning, stinging, or itching in different parts; the whole abdomen is very sensitive to

the slightest touch; the patient often shudders and feels chilly when moving, particularly in the evening; if he has heat without thirst, yawns and cannot sleep.

Cepa for frequent urging, the urine passes by starts or only in drops, is bright red and burning. For children when they scream, particularly when you press on the region of the bladder with your hand; after a cold generally or from wet feet or exposure of the abdomen to cold air or a draught.

Opium will often be beneficial in the most dangerous cases for infants who have nursed soon after the mother was very angry or very much frightened, when neither water nor stool passes, the abdomen is distended and other medicines have proved ineffectual.

If the water does not pass at all, or only very slowly, with burning in the urethra, and burning heat in the abdomen, *Camphor* is sometimes very useful, and also when caused by Spanish flies, in blisters or taken internally; too much must not be taken, smell it only or shake it with warm water, and take of that by the teaspoonful.

If it occurs after suppressed piles, particularly if these have been operated upon, the complaint is more difficult to cure, the pain and burning increase, the urine only escapes in drops, sometimes blood is discharged with the urine which often relieves, in this case use warm injections; *Aconitum* or *Mercurius* ease the symptoms, also *Sulphur*, or, if the pain is very great, *Apis*. *Nux vomica*, if the pain was partly caused by strong drink or increased by it. If worse after every cold, *Dulcamara* or *Cepa*; if at times small hard pieces pass, give, particularly after *Sulphur*, *Calcareas*; if the burning returns and increases, *Curbo vegetabilis* or *Arsenicum*. A complete cure can only be effected by long and careful treatment by a homœopathic physician.

THE PASSING OF BLOODY URINE is often combined with other complaints; give the above remedies. If from external injuries, *Arnica*; from spirituous liquors, *Nux vomica*; after excesses, *Cinchona*; if it returns often, *Hepar*. If accompanied by burning pains at the end of the urethra; if the testicles are drawn up; cramp-like pains in the knees, thighs and groins; if contracting and cutting pains in the small of the back extend to the navel, give *Pulsatilla*.

RUPTURE. HERNIA.

Rupture may be produced by severe exercise on horseback or on foot, by lifting heavy weights, playing on wind instruments, vomiting, costiveness, whooping-cough, crying, tight clothing, jumping, etc.

In many cases it can be cured by internal remedies, when it has not been neglected too long. Trusses have been greatly improved in this country, but bad articles are still common. It is of great importance to get a good truss, for a bad one may do great injury; if it does not fit exactly, or if it slips, it may make the rupture incurable. A good truss must not be troublesome, although in the beginning it may feel rather uncomfortable; it must not be applied until the hernia has been entirely reduced, when the truss ought to keep it in its position. If the patient perceives, after the instrument has been applied, that something protrudes, let him take it off, lie down upon his back, reduce the hernia again, and replace the truss. When the hernia protrudes frequently, the truss is good for nothing. A person afflicted with hernia, who does not wear a truss, or who wears a bad one—who exerts himself afterwards too much, or is otherwise imprudent—exposes himself to the danger of having incarcerated or strangulated hernia, and mortification following. It is also of great importance to know how a hernia should be reduced.

In order to accomplish this properly, the patient should lie down on his back, and place a pillow under the hips, so that the ruptured part may be higher than the rest of the abdomen—he should then incline a little to the side on which the rupture appears, to relax the abdominal muscles as much as possible, remain perfectly quiet, and avoid all motion. If the proper medicines are taken the hernia will generally return of itself during sleep without external aid. If it does not become thus reduced, it can be better done by another person, though many are able to reduce it for themselves; it is best done by pressing the left hand gently against the part which protrudes, as if for the purpose of grasping it; after this, press the fingers of the right hand on the top, and then rub it lightly, by passing the fingers over it; place the flat of the hand from time to time on it, and gradually increase the pressure; continue these efforts patiently for half an hour, or longer, if the hernia is considerable. Most kinds of strangulated hernia can generally be reduced with facility, after the proper remedies have been taken, particularly *Aconitum* or *Nux vomica*. When the hernia will not bear pressure, medicine must first be taken to remove the irritability—after which it frequently returns of itself. In some case, placing a cloth dipped in warm water upon the tumor will effect the reduction. Some persons apply cold water or ice in a calf's bladder, but this should not be kept on long, and should not be used at all when the parts are hot and red.

For violent burning in the belly, as from red-hot coals, the least touch giving pain, with sickness of the stomach, bitter, bilious vomiting, anxiety,

and cold perspiration, give *Aconitum*. In case *Aconitum* only alleviates the symptoms for a short time, without any other good effect, give *Veratrum*. If, after this, the efforts to reduce it should fail, it being on the left side, with much pain going from the abdomen to the rupture, and much rumbling of wind, give *Cepa*; if on the right side, *Rhus*. If accompanied by sour vomiting, instead of bitter, give *Sulphur*; leave the patient to rest awhile, and if he falls asleep do not disturb him.

If the pain is less violent when the parts are touched, and the vomiting less, but the breathing is attended by much difficulty; when taking cold, or overheating, vexation of mind, or improper diet has been the cause, give *Nux vomica*; when the patient becomes red in the face, when the abdomen is distended, or when bad smelling and tasting eructations or vomiting occur, give *Opium* until there is a change; if the vomiting is accompanied by cold sweat, or if the extremities become cold, give *Veratrum*; and if it does not improve, *Belladonna*. As soon as the abdomen becomes sensitive, and cannot endure to be touched without pain, give *Aconitum* and *Sulphur*, as above. When the rupture has already assumed a bad appearance—when the symptoms are very alarming, and no surgeon can be had, give *Lachesis*, and if, after a time, there is no improvement, *Arsenicum*.

In all cases of strangulated hernia, a surgeon should immediately be sent for, but the above remedies must be taken in the meanwhile; if they prove efficacious before he arrives, so much the better; if not, he will perform the necessary operation, which he will find to be much easier after the patient has taken the above medicine, as numerous experiences have proved.

If you wish to cure an ordinary rupture before it becomes strangulated, and while it causes no particular trouble, consult a homœopathic physician. But, if the rupture is of recent occurrence, *Rhus* will give relief in most cases. If it occurred suddenly, by lifting or great exertion, lie down quietly, keep as quiet as possible, with a pillow under the hips, and take *Rhus*. If it occurred slowly while standing, *Cocculus*. *Nux vomica*, if otherwise indicated.

CHAPTER XI.

DISEASES OF WOMEN.

MENSTRUATION (THE MONTHLY SICKNESS).

Menstruation is often delayed beyond the period at which we have reason to expect it in healthy females, or when it does appear, it is frequently preceded by much suffering, and followed by hysterics and other complaints. Complaints attendant on the cessation of the menses are still more serious.

These complaints are generally produced by diseases which existed previously, and can only be cured by the continued attendance of a homœopathic physician. Affections of this class frequently find their origin and support in the mode of living; we can often trace them to insufficiency of clothing, which, especially in a variable climate like ours, is very injurious; many of the attendant complaints arise from other causes, which medicine alone can remove.

The age at which this function first makes its appearance, in temperate climates, is about the fifteenth year; though in some instances it occurs at a much earlier age, and in others again it is protracted several years later. In warm climates it generally appears as early as the ninth or tenth year, and in cold ones not often earlier than the twentieth.

The average duration of a menstrual period is about five days; it varies considerably, however, in different individuals, in some continuing for seven or eight days, and in others not more than two or three. It generally returns regularly in healthy females, every twenty-eight days, and usually continues until about the forty-fifth year, when its final cessation takes place, which is usually attended with a good deal of disturbance of the general health, as well as of irregularity of this function; hence this period of life has been called the "critical age," or "change of life."

TARDY MENSTRUATION.

When menstruation is tardy, scanty, or too late in making its appearance, beware of all quack medicines which pretend to induce the discharge; many girls and women have ruined their health for ever by using such medicines. In many cases a proper attention to diet, exercise and clothing is all that is necessary to produce a healthy state of this function. Females subject to menstrual irregularities should carefully avoid all highly seasoned food, and also coffee, green tea, and all spirituous and malt liquors as beverages. Those of sedentary habits should accustom themselves to daily exercise in the open air, either by walking or riding. Sedentary habits and close application to study are both highly injurious. The clothing should be warm, adapted to the season, and changed to suit the variations of temperature. It is of the greatest importance to keep the feet dry and warm, by wearing thick-soled shoes and warm stockings, especially in wet or damp weather. The neglect of this precaution has destroyed the health and happiness of hundreds. A cheerful disposition should also be cultivated, as all depressing mental and moral emotions have an injurious tendency.

There are cases, however, in which, in addition to the observance of the above rules, it will be necessary to make use of one or more of the following remedies, which can be administered without injury; if they fail to effect the desired object, apply to a homœopathic practitioner.

Pulsatilla is especially adapted to females of a mild, easy disposition; pain in the lower part of the abdomen and across the small of the back; giddiness, fulness about the head and eyes, paleness of the face, with occasional flushes of heat; roaring in the ears, or partial deafness, coldness of the hands and feet, and disposition to general coldness; sour taste in the mouth after eating; nausea and vomiting; alternate crying and laughter; sadness and melancholy; painfulness of the breasts; palpitation of the heart, especially on going up stairs; loss of appetite, with desire for acids and disinclination to exercise. The symptoms are worse in the afternoon and before midnight; the pains frequently change from one place to another; better in the open air and while exercising. If no improvement follows after a week or ten days, give *Sulphur*.

Cocculus, when the patient suffers from nervous symptoms, or for contracting, pinching pain in the lower part of the abdomen, with oppressed respiration; and also for a scanty discharge of black blood, or when the patient is weak, with great agitation, sighing or groaning, and is scarcely able to speak.

Belladonna if there is rush of blood to the head, with redness of the face, sometimes even dark red; bleeding at the nose; redness of the eyes and intolerance of light; giddiness, especially after stooping; and full, bounding pulse.

Bryonia is indicated when, instead of menstruation, there is bleeding at the nose. *Lachesis* and *Lycopodium* are also suitable in similar cases.

Cuprum in cases of spasms, or threatened spasms, with nausea and vomiting, or when there are cramps in the extremities, with screaming; also in convulsions.

Apis if the menstrual discharge either stops entirely, or flows two or three days, stops, and flows again, and so on; if the right side, from the hip-bone to the navel, is very

sensitive; if violent, cramp-like, bearing-down pains, like labor-pains, appear, followed by a scanty discharge of dark bloody mucus; or if the girl, at the time, becomes very talkative, thoughtless, and don't mind anybody.

Nux moschata for women of a changeable disposition, with an irregular, scanty, black flow.

Phosphorus will be serviceable in women of a delicate constitution, with slight form, weak chest, of lively disposition, and predisposed to lung diseases; when, in place of menstruation, expectoration of blood in small quantities occurs, with hacking cough and pains in the chest.

Arsenicum is applicable in cases attended with great weakness, also in swelling of the face, especially around the eyes, with paleness of the complexion, more in the morning; swelling of the feet and ankles in the evening, and a feeling of heat or burning in the veins.

Veratrum when the patient has cold hands and feet, disposition to diarrhœa, etc.

Sulphur after *Pulsatilla*, when the latter has been insufficient, and also after any of the above remedies, especially if the patient complains of heat in the head, giddiness, palpitation of the heart, and shortness of breath, particularly on going up stairs; loss of appetite; sickness at the stomach after eating; emaciation, and depression of mind.

SUPPRESSION OF THE MENSES.

By this term is understood the sudden stoppage of the menstrual flow. This is frequently consequent upon some accidental cause, such as exposure to cold or dampness without a sufficiency of clothing, particularly of the feet; putting the feet in cold water; powerful mental emotions, etc. It also often occurs in the course of other diseases, especially those of the lungs, liver and womb, in rheumatism, etc. In these latter instances the difficulty can only be removed by the cure of the primary disease, the appropriate treatment of which will be found under their respective heads.

Aconitum when the affection arises from fright, and especially if there is congestion of blood to the head or chest,

with redness of the face; giddiness, nausea or faintness; throbbing or acute shooting pains in the head, sometimes attended by delirium or stupor. When the suppression is occasioned by fright, this remedy should be administered immediately, and if not speedily followed by relief, or if the amelioration is but partial or temporary, it may be succeeded with benefit by *Opium* or *Veratrum*.

Bryonia is most suitable for unmarried women, when the suppression is followed by a sensation of swimming in the head, with heaviness and pressure towards the forehead, aggravated by stooping and by motion; pains in the chest; dry cough; bleeding of the nose; bitter or sour eructations; pain in the pit of the stomach after eating; rising of food; pains in the small of the back, and also pains of a drawing character in the lower part of the abdomen; constipation.

Belladonna will be serviceable after *Aconitum* in plethoric subjects, when there is congestion to the head, bleeding of the nose, and for most of the symptoms mentioned under *Aconitum* when the latter is insufficient.

Nux moschata if caused by fatigue and taking cold at the same time, particularly from wet feet.

Pulsatilla, however, is the chief remedy in this affection, and will afford relief in the majority of instances, especially when the suppression results from the effects of cold or a chill by exposure to dampness, and the patient suffers from headache, chiefly confined to one side, with shooting pains extending to the face, ears and teeth; palpitation of the heart; feeling of suffocation; flashes of heat; nausea or vomiting; disposition to diarrhoea; pressure in the lower part of the abdomen; frequent desire to void urine; and whites. It is best adapted to those of a mild, easy disposition, with inclination to melancholy and tears.

Veratrum for nervous headache; hysterical affections; frequent nausea and vomiting; pale, earthy color of the face; coldness of the hands and feet, or nose; great weakness with fainting fits.

Sulphur for pressing headache chiefly in the back part of the head, extending to the nape of the neck, or one-sided headache, or pain over the eyes, with heat and throbbing in the head; heaviness of the head; confusion of the head; giddiness; dimness of vision; bluish circles round the eyes; pimples on the forehead and round the mouth, and red spots on the cheeks; voracious appetite; sour stomach; sour and burning eructations; fulness and heaviness in the stomach and abdomen; constipation, with ineffectual efforts to evacuate, disposition to piles; sometimes loose, slimy stools; cramps in the abdomen; whites; numbness of the limbs; great disposition to take cold; difficulty of breathing; pain in the loins; great depression after talking; fatigue and weakness of the limbs; irritability of temper or disposition to melancholy and tears.

In cases of long standing, especially when occurring in debilitated subjects, *Cinchona*, *Causticum*, *Natrum muriaticum*, and *Arsenicum* will be useful, but it is much better to consult a physician.

TOO COPIOUS MENSTRUATION.

When the menstrual discharge is excessive, or continues longer than usual, and is attended by pains in the back, loins and abdomen, which resemble those of labor, it becomes necessary to lessen it, and also to prevent its recurrence.

Rest in the horizontal posture is also in most cases imperative.

Ipecacuanha for too great a flow, and also in flooding after labor, especially when there is a profuse discharge of bright red blood.

Crocus is one of the most valuable remedies in this complaint, particularly when the discharge is dark colored, clotted and very copious, and the menses have returned too soon.

Platina will be useful in cases in which the menstrual discharge is too great, and consists chiefly of dark-colored blood, and is attended with bearing down pains, sexual and general excitability.

Chamomilla will be beneficial when the discharge is dark colored and clotted, accompanied by griping pains which extend from the small of the back forward towards the abdomen; thirst; coldness of the extremities, and sometimes fainting.

Nux vomica when the menstruation is too copious, and returns before the usual time; when it continues too long, or stops and returns again. It is particularly adapted to women who make too free use of coffee, wine or other stimulants, all of which articles should be strictly prohibited for several months.

Ignatia is most serviceable in cases in which the discharge continues too long, and is frequently attended by yawning and hysterical symptoms.

Cinchona in cases of great debility in consequence of too copious or too long-continued menstrual discharge. It may be given with advantage; after the discharge has been checked by other remedies, and the patient suffers from weakness only.

Sabina, menstruation too profuse, too early flow by spells, with colic and labor-like pains; pain from back to front, flow increased by motion.

Sulphur given during the intervals two or three times, allowing a week to elapse between the doses, will often be beneficial, after the failure of other remedies. *Calcareæ*, administered in the same manner, will frequently be found successful.

PAINFUL MENSTRUATION.

Belladonna is indicated when there is severe pain in the back, and strong bearing down in the lower part of the abdomen, as if the parts would fall out, accompanied with

violent congestion of blood to the head, confusion of sight, frightful visions, screaming, redness and bloated appearance of the face and frequent, ineffectual efforts to stool with much straining.

Chamomilla when the pains resemble labor pains, with pressure from the small of the back toward the front of the abdomen and downward; colic, with tenderness of the lower part of the abdomen when touched, and discharge of dark colored and coagulated blood.

Veratrum for menstrual colic, with nervous headache; nausea and vomiting; coldness of the hands, feet or nose; great weakness; fainting fits and diarrhœa.

Coffea will be beneficial if there is much nervous excitement; colic, with feeling of fulness and pressure in the abdomen, and violent spasms which extend to the chest; delirium; wringing of the hands, grinding of the teeth; violent screaming; difficulty of breathing and groaning; coldness of the whole body, numbness and stiffness.

Cocculus when there are spasms in the abdomen, cramps in the chest; flatulency; nausea and faintness, and preservative colic.

Pulsatilla is serviceable when there is a feeling of heaviness, as if from a stone, in the lower part of the abdomen; violent pressure in the lower part of the abdomen and small of the back, attended with a sensation of drawing and numbness extending down the thighs; the latter sensation is felt more particularly when the patient is in the sitting posture; pressure in the rectum with ineffectual efforts to evacuate; frequent inclination to pass water.

Nux vomica is most useful in relieving writhing pains in the abdomen, accompanied by nausea, or pains in the back and loins, as if dislocated; feeling as if bruised on the bones of the pubis; spasms and pricking in the lower part of the abdomen; paroxysms of pressing and drawing pains, frequent desire to make water, and sensation in the bowels as if they would burst.

GREEN SICKNESS. CHLOROSIS.

' This affection commonly occurs in young girls at the period of puberty—about the fourteenth year—and is most generally owing to some obstruction to the first menstruation. A similar condition may, however, be induced in females of a more advanced age, and of delicate constitution, by excessive loss of blood or other fluids, sedentary occupation, exposure to dampness and cold, insufficient food and clothing; mental emotions of an unpleasant kind, etc.

The disease may be distinguished by excessive paleness of the complexion and lips, the latter appearing at times almost white—sometimes alternately with redness and flushes of heat; general mental and physical languor; the patient complains of feeling weak and tired; the breathing is hurried; the slightest exertion produces panting respiration and violent palpitation of the heart; this is particularly noticeable upon directing the patient to go up stairs quickly; the lower extremities often become swollen; the appetite depraved, with longing after chalk, charcoal, etc.; flatulent distention of the abdomen, particularly after meals; constipation or diarrhœa; cough, sometimes attended by expectoration of dark, clotted blood, and emaciation.

Pulsatilla is best adapted to those of a mild, easy disposition, disposed to sadness and tears; and particularly if the disease has been produced by exposure to cold or dampness, and is attended by frequent attacks of one-sided headache, with pains shooting to the ears and teeth; sometimes the pain changes suddenly from one side to the other; aching in the forehead, and pressure on top of the head; sallow complexion alternating with redness and flushes of heat; difficulty of breathing and feeling of suffocation after the slightest exertion; palpitation of the heart; coldness or heat of the hands and feet; looseness of bowels; whites; nausea and vomiting; sensation of weight in the abdomen, periodical expectoration of dark, clotted blood; hunger with repugnance to food, and great fatigue, especially in the legs.

Sulphur should have the preference where there is pressive pain in the back of the head, extending to the neck; congestion to the head with throbbing pains; humming in the head; pimples about the mouth and on the fore-

head; paleness of the face, with red spots on the cheeks; emaciation; voracious appetite; sour or burning eructations; pressive fulness and heaviness in the stomach and abdomen; irregularity of the bowels; pain in the loins; difficulty of breathing; great depression after talking; fatigue, especially in the legs; great liability to take cold. It is most suitable for irritable and passionate persons, or those inclined to sadness and tears.

Bryonia when there is frequent congestion to the head or chest; bleeding of the nose; chilliness, sometimes alternating with heat; dry cough; colic; constipation; bitter taste in the mouth; yellowish coated tongue; feeling of aching, as if from a blow, in the stomach.

Calcareo carbonica will frequently effect a cure after the failure of other remedies, when the difficulty of breathing is very great, with swelling of the extremities; swollen glands; leucorrhœal discharge; excessive emaciation, etc.

Ferrum will be serviceable after *Calcareo*, when the salowness continues, with great debility, want of appetite, nausea, etc. When the complexion is very pale, the lips bloodless, and the heart's action palpitating, irregular.

This disease, however, should in all cases be under the management of a homœopathic practitioner, as it is one, which, if neglected or improperly treated, will destroy the health and consequently the happiness of the patient.

CESSATION OF THE MENSES.

The period at which menstruation ceases is at about the forty-fifth year of age, though in some instances the "change" takes place several years earlier, and in others again, it may be postponed till the fiftieth year, and even later.

Women of delicate constitution and those who "live high" and whose habits are sedentary, generally experience this change earlier than those of a more robust organization, or those who live temperately and make use of plenty of exercise, especially in the open air.

As the "change of life" approaches, the menses generally become irregular, both as regards the time of their return and the quantity of the discharge. They may either return too soon, or the interval may be much

longer than usual. The quantity discharged is at times much smaller than common, and at others again it may be so profuse as to amount to a hemorrhage. Occasionally the flow comes on suddenly and quite unexpectedly, continues for a short time, and then stops without being followed by any of the ordinary symptoms of suppression. Sometimes the menstrual fluid discharged is largely mixed with mucus.

In the majority of women, while this change is in progress, there is more or less disturbance of the general health, giving rise to headache; vertigo; flushes of heat; paleness and debility; nervousness; irregularity in the urinary discharge; the flow being sometimes frequent and the quantity large, at other times scanty and high-colored; pain in the back and loins, which extends down the thighs with a creeping sensation; heat in the lower part of the abdomen; occasional swelling of the abdomen; swelling of the extremities; piles and pruritus (violent itching of the privates).

In some instances, however, the menses gradually cease without being attended by any of the unpleasant symptoms enumerated above. Frequently after the complete cessation of menstruation the health becomes better than it had ever been previously.

According to the symptoms select *Pulsatilla*, *Sulphur*, *Cocculus* or *Lachesis*.

A proper attention to diet, exercise, clothing, etc., is very important. The food should be light and digestible, and everything of a stimulating nature carefully avoided. Daily exercise in the open air, either by walking or riding, and also bathing, will be productive of great advantage. The clothing should be warm and comfortable, and changed to suit the weather.

WHITES, LEUCORRHOEA.

This term is applied to a discharge of mucus, often whitish, proceeding from the vagina. It is of such common occurrence that many women and sometimes even small children are subject to it. At first the patient notices a slight discharge of whitish matter, which escapes from the vagina drop by drop, and is unaccompanied by any unpleasant sensation. If neglected, as is most generally the case in the beginning, the discharge increases in quantity, and in some cases it becomes excessive.

The quality, too, is changed, and it becomes greenish, yellowish or of a dark brown, almost black color, and gives rise to pains, excoriation, etc., of the parts. The general health also suffers; the appetite fails; the pulse becomes weak; the face pale and bloated; the eyes become dull and heavy, and are surrounded by yellowish circles; vision is impaired; there is constant pain in the back and loins; lowness of spirits; excessive debility, etc.

The exciting causes of leucorrhœa are numerous; anything which affects the general health may produce it; sometimes it is owing to the presence of foreign bodies in the vagina; some of the worst cases of the disease, for instance owe their origin to a long continued use of an instrument intended

to remedy falling of the womb. Such cases can never be cured until the exciting cause is removed. The disease is sometimes owing to inattention to cleanliness.

In the treatment of this affection much benefit will be derived from syringing the parts frequently with cold water.

Calcareo carbonica is particularly suited to women of a lymphatic constitution, light complexion, and who have copious menstruation which is liable to return too soon; when the discharge is milky, often passes with the urine, and on lifting, and usually comes on, or is worse immediately before menstruation; is often attended by itching and burning; shooting pains through the parts, and falling of the womb. It is also valuable in the corrosive leucorrhœa of young children.

Pulsatilla when the discharge chiefly takes place immediately before, during and after menstruation; when produced by fright, and when occurring in young girls who have not yet menstruated; the discharge being thick, like cream, sometimes corrosive and attended by itching of the parts.

Cocculus if the discharge is mixed with blood during pregnancy; or is like the water in which meat has been washed, attended by colic and flatulency, and taking place principally before and after menstruation.

Natrum muriaticum when the discharge is copious, and consists of transparent, whitish and thick mucus, or is acrid, with yellow color of the face; also when accompanied by headache, disposition to diarrhœa, with slimy evacuations and colic.

Sulphur for inveterate cases of leucorrhœa; the discharge sometimes yellowish, burning and corrosive, and preceded by colic; also when it results from repelled eruptions or ulcers.

REMARKS ON PREGNANCY.

The woman whose lot it is to bear within herself a living being, occupies a position of the highest interest.

During this period, therefore, she should consider that her most trifling actions may exert a great influence on the future physical, and we may add, moral and intellectual condition of a being bound to her by the fondest ties,—a being that has a right to expect from her, as its parent, so far as it lies in her power to give, a sound constitution. Therefore, to realize such an object, it is the duty of the mother to pay all possible attention to her *diet, exercise and dress*.

Diet.—With regard to diet she should observe the greatest simplicity; her food should consist simply of substances of a purely nutritive nature, and everything medicinal or stimulating, such as food prepared with much seasoning, spirituous, vinous and fermented liquors, strong teas and coffee, should for the most part be avoided.

She should also guard against taking too great a quantity of nourishment, as excesses of this kind may give rise to dyspeptic and other troublesome symptoms; which, besides being a source of much suffering to herself, may seriously affect the health of her future offspring.

Exercise.—Let us here say, with regard to exercise, that in order to enjoy a good degree of health, it is absolutely indispensable during the term of pregnancy. Passive exercise, such as riding in a carriage, is not only insufficient at all times, but has often been found particularly injurious towards the end of pregnancy; and has been the case of premature or abnormal births.

The most desirable kind of exercise is walking in the open air, such exercise must not, however, interfere with the process of digestion, and is, therefore, most suitable two or three hours after a moderate meal at noon, and during warm weather towards evening; care being taken to avoid the dampness of the night air by returning home early.

Dress.—The dress should be strictly suited to the season and not produce the least pressure on any part of the body; even the garters should be worn loosely. Tight lacing is highly injurious; it must be evident to the plainest understanding, that serious injury to the health of both mother and child must often result from a continual and forcible compression of the abdomen while nature is at work in gradually enlarging it for the accommodation and development of the fœtus; and the result is, no doubt, that there are many who owe their deformities to the vanity of their mothers.

DERANGEMENTS DURING PREGNANCY.

Although the state of pregnancy is one perfectly natural and perfectly healthy, yet in consequence of the existence of constitutions naturally weak, and of those disordered by the excessive use of medicines prescribed under the old system, and from numerous other causes, it often happens that this condition is attended by many deviations from health, which it may be well to notice, together with the best means for removing them.

The following are some of the most common of the deviations from health which are met with during pregnancy.

MENSTRUATION.—The continuance of menstruation during pregnancy, though of comparatively rare occurrence, is occasionally met with, and may be either a deviation from the ordinary course of nature or an actual disease.

When a cause of suffering to women by being too long continued or profuse, producing debility, or when attended by pain, some of the following medicines may be required: *Crocus*, *Platinum*, *Cocculus*, or *Phosphorus*.

For their particular indications, and also for other remedies, see "Painful Menstruation" and "Too Copious Menstruation."

VERTIGO AND HEADACHE.—Very often during pregnancy women are troubled with fulness, giddiness and pain in the head. Sometimes these symptoms commence as early as the third or fourth week after conception. The feeling of giddiness or lightness is frequently accompanied by dulness and a disinclination to active employment; sleepiness or sometimes sleeplessness; dimness of sight after stooping; flashes before the eyes; disposition to fall forward when stooping; headache, with a feeling of weight on the top of the head or in the back of the neck; palpitation of the heart; nervousness, tremblings, etc. These symptoms are commonly worse in the morning.

Aconitum is best adapted to persons of a full habit, with a florid complexion and nervous temperament, and especially if there is giddiness, as if intoxicated, on rising from a seat, frequently causing one to fall; faintness and dimness of vision on rising from a recumbent posture; determination of blood to the head, and pressure in the forehead; stupefying pains in the head; eyes red and sparkling, with intolerance of light; black spots before the eyes.

Belladonna for congestion to the head, with vertigo, staggering and trembling; buzzing in the ears; intolerance of noise; heaviness and pressive pain on top of the head or in the forehead, over the eyes; pain, with a sense of expansion of the head, and violent throbbing of the large arteries of the neck; redness of the face; soreness and redness of the eyes; sparks before the eyes; objects appear double. The symptoms are mostly worse in the morning.

Glonoine, see what has been said of this remedy under "Headache."

Nux vomica is most suitable for women of a hasty temper, and those who are of sedentary habits, or addicted to the use of wine or coffee. The symptoms are generally aggravated in the morning, and better in the open air. It is valuable for giddiness with a feeling of confusion in the head; with cloudiness of sight and buzzing in the ears; pains in the head of a tearing, drawing or jerking character, or periodical pains; constipation; insipid or acid, bitter and putrid taste, etc.

Opium for giddiness on rising from a stooping or sitting posture; vertigo, with stupidity as if from a debauch; great drowsiness; imperfect sleep, with puffed face, thick, heavy breathing, and illusions of the imagination.

Platina if there is headache, which increases gradually until it becomes violent, and then diminishes in the same way, and also for headache produced by vexation or passion; constant disposition to spit, the saliva being tasteless or sweetish. It is particularly valuable in sufferings of nervous and hysterical women. The symptoms are worse during repose, and relieved by motion.

Pulsatilla for giddiness, which is worse after stooping, with momentary blindness and staggering, throbbing and shooting pains in the head; one-sided headache; headache every other day. The sufferings are sometimes attended with numbness of the limbs, are worse in the afternoon and evening, and better in the morning. It is most suitable for women of a mild disposition.

Sulphur, if there is congestion of blood to the head, with pulsative pains and sensation of heat in the head, vertigo and staggering, principally when seated, or after a meal, attended sometimes by nausea, fainting, weakness, and bleeding from the nose; confusion of the head, with difficulty in meditating, worse in the morning or evening; one-sided headaches, or headaches on top of the head, the

back part, or the forehead over the eyes, with dimness of sight; periodical or intermittent headaches, worse in the morning or evening, or at night. The pains in the head are mostly aggravated by movement, walking in the open air, and meditation.

MORNING SICKNESS.—Nausea, vomiting, heartburn, etc., are at the same time the most common and the most distressing accompaniments of pregnancy. They usually begin five or six weeks after conception, and continue until the sixteenth week. After which time they generally abate or cease entirely; in some cases, however, they continue with but slight modification to the end of pregnancy.

These troublesome symptoms commonly take place immediately on rising from bed in the morning, and are often exceedingly harassing for two or three hours. Occasionally they return again in the evening.

Attention to the diet must be particularly observed in this affection. The food may be taken at more frequent intervals and in smaller quantities—and when the vomiting is very persistent liquid food alone should be used.

Ipecacuanha should be given, when there is nausea and vomiting, with great uneasiness in the stomach and epigastrium; vomiting of drink and undigested food; bilious vomiting, and tendency to relaxation of the bowels.

Nux vomica when there is nausea and vomiting, chiefly in the morning, while eating, or immediately after eating or drinking; acid and bitter eructations and regurgitations; violent hiccough; waterbrash; pain and sensation of weight in the pit of the stomach; constipation and irritable temper.

Arsenicum if there is excessive vomiting, especially after eating or drinking, with attacks of fainting; great weakness and emaciation.

Pulsatilla. Nausea after eating; vomiting of food; heartburn; eructations, acid, bitter, or with the taste of food; depraved appetite, or craving for acids, wine, etc.; whitish coated tongue.

Natrum muriaticum will be useful in obstinate cases, accompanied by loss of appetite and taste; constant flow of water from the mouth; waterbrash, acid stomach; pain and soreness at the pit of the stomach.

Nux moschata, see this and *Veratrum*, under "Affections of the Stomach."

Phosphorus will be beneficial in cases in which the symptoms are similar to those mentioned under *Arsenicum*, and which the latter remedy has failed to remove.

CONSTIPATION.—Constipation is a very common attendant on pregnancy, especially with persons naturally of a costive habit. When it does not arise from a mechanical cause, it may frequently be removed by active exercise in the open air, drinking freely of cold water, and eating plentifully of cooked or ripe sweet fruits.

When these means are insufficient one or more of the following medicines may be given: *Nux vomica*, or in some cases it may be necessary to give *Bryonia*, *Opium*, *Lycopodium* or *Sulphur*. (See "Constipation.")

DIARRHŒA.—Diarrhœa occurs occasionally during pregnancy, much less frequently, however, than constipation, but is much more injurious, and means should be taken to check it speedily, otherwise the health of the woman may suffer seriously.

The medicines which are mostly beneficial are: *Lycopodium*, *Sulphur*, *Dulcamara*, *Antimonium crudum*, *Nux moschata*, *Pulsatilla* and *Rheum*. (See "Diarrhœa.")

ITCHING. PRURITUS.—Many women are, during the course of pregnancy, excessively annoyed and distressed at times by a very troublesome itching of the privates.

Sometimes this itching arises from a vitiated condition of the mucous secretion of the parts, and at others it is owing to the presence of an eruption resembling the thrush of infants, which occasionally entirely covers the mucous membrane of the vagina. In other instances again, the parts assume a dark red hue, attended with great irritation and excoriation, and almost constant oozing of a thin, watery secretion, the accumulation of which is attended with the most intolerable itching. This affection is not confined alone to the pregnant state, but may occur at any time.

Bryonia, *Carbo vegetabilis*, *Mercurius*, *Pulsatilla*, *Lycopodium*, *Silicea*, *Sulphur* and *Rhus* are the chief remedies in this complaint.

The cure will be much accelerated by frequently washing the parts with cold water.

A solution of borax in water, applied two or three times a day, will generally remove the itching in a few days; the same result is often obtained by washing the parts with water slightly acidulated with lemon-juice.

FAINTING AND HYSTERICAL FITS.—Women of a delicate constitution and nervous temperament are frequently attacked with fainting and hysterics during pregnancy. Generally the attack passes over in a short time without any bad consequences resulting. When the attacks are light, attention to dietetic rules, and plenty of exercise in the open air, will generally prevent their recurrence. But should the attacks be more severe, and these means insufficient for their removal, it may be necessary to trace the cause, and, if possible, remove it. Frequently they arise from tight lacing, warm rooms, etc.

The speediest means of reviving a patient from fainting is to admit fresh air in abundance, and sprinkle the face with cold water.

Aconitum may be useful in preventing a return of the attacks, when they occur in individuals of a full habit.

Coffea in nervous women, with great agitation; spasms in the abdomen; difficult respiration; cold perspiration, etc.

Cinchona when caused by general weakness, particularly from hemorrhages.

Chamomilla for hysteria which is excited by a fit of anger.

Nux vomica when these affections occur in choleric persons, and are accompanied by derangement of the stomach.

Belladonna is often useful after *Aconitum*, especially when there is congestion of blood to the head.

Pulsatilla is best suited to women of a mild, easy disposition, and when the attacks are attended by great excitability, with disposition to low spirits, etc.

Ignatia is one of the most valuable remedies when the patient complains of severe headache, as if a nail were driven into the head; melancholy, frequent sighing and concealed sorrow.

TOOTHACHE.—Toothache is a very common affection during pregnancy, and often attacks women who are seldom subject to it at any other time. Frequently it is of exceedingly severe character. It most generally commences in a decayed tooth, whence it may extend to the whole set, darting along the jaw, and also to the face and head. Occasionally, however, it originates in a sound tooth, and consequently care should be taken to consult a physician previously to having teeth extracted.

The medicines which will be most commonly found useful to relieve the suffering, are the following: *Calcareo carbonica*, *Apis*, *Mercurius*, *Chamomilla*,

Nux vomica, *Pulsatilla* and *Staphisagria*. For the particular indications governing the choice and repetition of these remedies, and also for other remedies which may be useful, see the article "Toothache," in a preceding chapter.

VARICOSE VEINS.—During pregnancy many women suffer a good deal from a distention of the veins in the lower extremities. The swelling generally commences first about the ankle, and gradually extends upwards towards the thigh; it is frequently confined to the leg below the knee, but occasionally the veins of the entire limb are implicated. The disease may involve both limbs, or it may be confined to but one.

The enlarged veins lie in general near the surface, and assume at first a reddish hue, and after continuing so for some time, become bluish or of a leaden color, and the large ones become very much knotted. They get larger when the patient is standing, or when the limb is hanging, and the swelling decreases on lying down.

This affection, though occurring more frequently during pregnancy, is not confined to this state, but may take place at any time in the female, and is also met with in the male sex.

The disease in the beginning is not painful, but if the swelling continues to increase, it may become so, and the veins may ultimately burst, and a large quantity of blood be discharged, either externally, or effused beneath the skin.

Varicose veins are generally caused by obstruction to the circulation arising from the pressure of the enlarged uterus upon the blood vessels; their occurrence in an aggravated form, however, is indicative of constitutional debility.

After delivery, the pressure being removed, the swelling gradually disappears, and the veins assume their natural size and appearance.

Much good will often result from frequent bathing with cold water or diluted alcohol. Having the limb bandaged with an India rubber bandage, or making use of the India rubber stocking will also afford great relief, especially to persons who are compelled to be much on their feet. The bandage or stocking should be applied in the morning before rising, when there is the least swelling, beginning at the foot and progressing upwards with a moderate and equal pressure.

The patient should remain lying down in severe forms of the complaint.

Pulsatilla will in most cases be found useful, especially if there is much swelling of the veins and of the whole limb, with great pain and more or less inflammation, or when the veins, and sometimes the entire limb, assume a bluish color. *Arnica*, too, may prove useful.

Lachesis may follow *Pulsatilla* when the latter has pro-

duced some relief of the pain and swelling, but the discoloration still remains.

Nux vomica when attended with constipation, hemorrhoids and irritable temper.

Arsenicum, when with the symptoms mentioned under *Pulsatilla*, there are severe burning pains.

Carbo vegetabilis for the same symptoms as the latter when that has been insufficient.

Lycopodium in cases of long standing after the failure of other remedies.

HEMORRHOIDS OR PILES.—This affection frequently occurs in women during pregnancy who are not subject to it at any other time. This is chiefly owing to the pressure of the enlarged uterus on the contents of the abdomen causing more or less inactivity of the bowels, and obstruction to the circulation.

The appropriate treatment to pursue in this troublesome complaint, will be found under the heading of "Hemorrhoids" in the preceding chapter.

PAIN IN THE BACK AND SIDE DURING PREGNANCY.—Women often suffer very much from pain in the lower part of the back during pregnancy. Occasionally the pain is seated deep in the right side under the ribs. It is usually most troublesome from the fifth to the eighth month. The sensation experienced is that of an almost indescribable aching, or of a dull heavy pressure, as if caused by a dead weight resting on the part affected. When in the side, it is attended with a feeling of heat.

For the pain in the back, benefit will be derived from the use of *Bryonia*, *Rhus*, *Belladonna*, *Pulsatilla*, *Nux vomica*, *Causticum*, or *Sulphur*.

For that in the side *Aconitum*, *Chamomilla*, *Pulsatilla*, or *Phosphorus* will be most serviceable.

CRAMPS.—Cramps in the legs, abdomen, hips, or back, are common accompaniments of pregnancy, and when present, are exceedingly painful and annoying.

The remedies best calculated to remove cramps in the legs, which are most common, are: *Colocynthis*, *Hyoscyamus*, *Calcareo carbonica*, *Chamomilla*, *Nux vomica*, or *Sulphur*.

Those of the back: *Ignatia*, *Rhus*, or *Opium*.

Those of the abdomen: *Nux vomica*, *Pulsatilla*, *Belladonna*, *Hyoscyamus*, or *Colocynthis*.

INCONTINENCE OF URINE.—Frequent desire to void the urine, or total inability to retain it, are by no means of uncommon occurrence during pregnancy, and are extremely distressing to the patient.

The following remedies will generally afford relief: *Pulsatilla*, *Belladonna*, *Cinchona*, *Silicea*, or *Stramonium*.

DEPRESSION OF SPIRITS.—This unhappy state of mind, in which the patient imagines that she is afflicted with "all the ills that flesh is heir to," and that she will certainly never survive her approaching confinement, is often aggravated by meddling persons relating accounts of dreadful accidents and unfortunate terminations of labors, which in all probability never happened.

The patient may be much benefited under these circumstances by the cheerful conversation of judicious friends, exercise in the open air, proper attention to rules of diet, etc. And also by taking one or more of the following medicines.

Aconitum, if depression results from fright, and fear of death is the most prominent symptom.

Belladonna, if there is great agitation and restlessness at night; fear of ghosts; fear and disposition to run away and hide; involuntary laughter; disposition to laugh or sing, or to fall into a passion and rave; frightful visions; indisposition for exertion, etc.

Pulsatilla for depression, with sadness and weeping; uneasiness in the pit of the stomach; sleeplessness; she imagines herself to be oppressed with a multitude of cares; dislike to conversation; headache and heartburn.

Sulphur. Lowness of spirits, with great anxiety on the subject of religion; despair of eternal salvation; forgetfulness of proper names and of words when about to speak them; disposition to get angry.

MISCARRIAGE. ABORTION.—Women are liable to miscarry at any period of pregnancy; it occurs most frequently, however, about the third, or the beginning of the fourth month. When it takes place before or about this period, it is not very dangerous, though repeated miscarriages, from the profuse discharge with which they are mostly accompanied, impair the constitution, and very often engender some chronic malady. Miscarriages occurring at a later period are much more serious, and frequently highly dangerous to the sufferer.

Females who have miscarried once, are exceedingly liable to its recurrence, which liability is greatly increased, if it have occurred two or three times.

The most common causes of miscarriage are: mechanical injuries, as a

fall or blow, etc.; sudden and powerful mental emotions; the abuse of purgative drugs; great physical exertion; too free use of stimulating food and drinks; neglect to take air and exercise; late hours, etc.

The following symptoms generally precede and attend this affection: chilliness followed by more or less fever and bearing-down pains; severe pains in the abdomen; cutting pains in the loins, or pains resembling labor-pains; discharge of mucus and blood, sometimes of a bright red color, at others dark and clotted, followed by a flow of thin fluid. The miscarriage generally takes place along with this discharge, which, if not stopped by appropriate means, may continue for hours, and endanger the life of the patient.

In cases of threatened miscarriage the patient should immediately lie down, and remain so until the danger is passed; or, in case the miscarriage has taken place, she should still remain in this position for a few days to guard against a fresh discharge, which is more liable to occur in the upright posture.

Arnica, when the symptoms arise from a fall, blow, violent concussion, overlifting, or great physical exertion of any kind, this medicine should be given immediately.

Chamomilla, when there are periodical pains resembling those of labor, and each pain is followed by a discharge of dark colored or coagulated blood, or of blood and mucus mixed; also for violent pains in the bowels extending around the sides, accompanied by a sensation as if an evacuation of the bowels or bladder were about to take place; frequent yawning; coldness and shivering, with thirst.

Nux moschata, if the blood is very dark, thick and if it increases constantly in quantity, with bearing down, nausea, drawing in the legs, urine burning; for women of a changeable disposition, whose menstruation has generally been irregular, who have a cool, dry skin, cannot bear the open air, and have a weak stomach.

Secale is valuable, after miscarriage has occurred, especially in debilitated persons, or when the discharge consists of dark liquid blood and the pains are but slight.

Crocus is particularly serviceable in cases in which there is a discharge of dark, clotted blood, which is increased by the least exertion, with a feeling of fluttering, or as if

something was moving about in the region of the navel. It may be used with advantage in protracted cases, after other remedies have been administered unsuccessfully.

Ipecacuanha for abortion attended with spasms but without loss of consciousness; profuse and continuous discharge of bright red blood, accompanied with pressure downwards, cutting pains round the navel; nausea or vomiting; disposition to faintness; chills and heat.

Belladonna is especially useful in the commencement, and also subsequently when there are violent pains in the loins and the entire abdomen; severe bearing down as if all the intestines were about to be forced out; pain in the small of the back as if it were broken; pale or flushed face; profuse discharge of blood, neither very bright, nor dark colored.

Hyoscyamus for miscarriage attended with spasms or convulsions of the whole body, with loss of consciousness; discharge of light red blood; the symptoms are mostly worse at night.

Platina is useful when there is discharge of dark, thick or clotted blood; pains in the back which pass into the groins, and pressing or bearing down internally towards the privates, which are very sensitive. It is sometimes serviceable after *Ipecacuanha*.

Cinchona is particularly valuable for weak and exhausted persons; also when there is blood discharged at intervals, with bearing down pain; or for spasmodic pains in the uterus; giddiness, drowsiness, fainting; loss of consciousness and coldness of the extremities. This remedy is most useful in restoring the energies of the patient, and removing the remaining symptoms after the discharge has ceased.

Ferrum is useful in cases of abortion accompanied by fever, pains like those of labor, and discharge of blood.

Nux vomica and *Bryonia* may be given with advantage in cases attended with troublesome constipation.

FLOODING, during pregnancy, or at delivery.

When an accident of this kind occurs, the woman should lie down quietly, should move as little as possible, her mind be kept free from care, and the greatest quietness be preserved in the room and in the house. At the same time tie handkerchiefs around the upper part of the thighs, silk ones are preferable; also around the upper part of the arms. A few mouthfuls of water, and if the face becomes pale, with fainting, a few drops of wine are of great service.

The smelling of vinegar, rubbing it on the nose, temples, etc., is also beneficial, only take care not to deluge the patient with it, but only take about a teaspoonful in your hand, or dip your finger into it, that the smell of the vinegar may afterwards be removed with facility. In long continued flooding with females of more advanced age, when not in childbed, it is best to avoid all warm drinks for a year, and instead, to drink milk five or six times a day, which has been cooled in the cellar, or is a little soured. In these floodings, it is necessary, if possible, to procure a homœopathic physician.

During pregnancy or after delivery, tincture of cinnamon is sometimes of use; put a drop into half a teacup of water, stir it up well, and give a teaspoonful as often as the hemorrhage becomes worse; this remedy may be given when the flooding is caused by lifting, carrying, over-reaching, or a false step. If the tincture is not at hand, a piece of cinnamon may be chewed. If this does not soon produce a salutary effect, give sugar, and when the burning sensation has passed, *Arnica*.

Arnica, in all cases arising from mechanical injuries, such as a fall, blow, lifting or carrying heavy weights, false steps, over-reaching, etc.

Ipecacuanha. Very copious continued flooding, particularly when occurring during pregnancy; the blood flowing regularly without interruption, with cutting pains around the navel; much nausea; great pressure and bearing-down; chills and coldness of the body; feeling of heat rising into the head; great weakness and inclination to lie down. This is also a most important remedy in flooding after delivery.

Chamomilla may be given after the latter remedy when that has produced little or no improvement, or when the flooding is accompanied by pains resembling labor-pains.

Bryonia, when dark red blood is discharged in great quantities, with violent pressive pain in the small of the

back, and headache, particularly in the temples, as if the head would burst; and constipation.

Cinchona is very important in the most dangerous cases; when heaviness of the head, giddiness, loss of consciousness, and drowsiness appear; for sudden weakness, fainting, coldness of the extremities, paleness of the face, convulsions of the mouth, contortions of the eyes, or when the face and hands turn blue, or single jerks pass through the whole body. While giving this remedy the abdomen may be rubbed gently, or cloths dipped into vinegar or water applied to it, and a few drops of wine may be given afterwards. It is also of use when the blood escapes by starts, with spasms or pains like labor-pains in the womb, passing to the anus; the discharge increasing with every pain. Likewise when accompanied by colic, frequent urging to make water, and sore tension of the abdomen. *Cinchona* is always serviceable for the debility or other troublesome symptoms, which frequently remain after the flooding has ceased.

Hyoscyamus for flooding attended by pains resembling labor-pains, with drawing in the thighs and small of the back, or in the limbs; heat over the whole body, with a quick or full pulse; swelling of the veins on the back of the hand or in the face; great uneasiness; excessive liveliness; trembling over the whole body, or numbness of the limbs; loss of consciousness, darkness before the eyes; delirium; twitching in the sinews or in the muscles of the extremities; jerking in one or the other of the limbs alternating with stiffness of the joints.

Belladonna, when the blood discharged is neither particularly dark, nor light colored, with pressure in the privates, as if everything would fall out; violent pains in the small of the back, as if it would break; pale or flushed face; dulness; heat about the head; palpitation of the heart and thirst.

Platina, when the discharge is dark and thick, but not

clotted; the pain in the back drawing towards the groins, with pressing-down internally towards the genitals, which are excessively sensitive. This remedy is particularly applicable to cases of flooding produced by any violent mental emotion.

Ferrum, when the blood is sometimes black and clotted; at others liquid, with pains like labor-pains; the face usually red; *Cinchona* follows *Ferrum* advantageously.

Apis and *Nux moschata*; see above, under "Miscarriage."

PREPARATION OF THE BREASTS.—By paying proper attention to the breasts before confinement, mothers will in many instances save themselves much suffering after delivery from sore nipples, gathered breasts, etc.

As pregnancy progresses, the breasts gradually increase in size, in order to be fitted for their future important functions, and especially in the first pregnancy; the parts immediately around the nipples become of a darker hue and the nipples themselves larger and more prominent. This development is frequently accompanied with more or less pain and soreness. The most common affections to which the nipples are subject, are, excoriation, cracks, inflammation and scaly eruptions. The structure of the breasts is sometimes irreparably injured by ignorant nurses squeezing them in childhood with the erroneous notion that such a process is necessary to expel some matter contained in them.

Serious injury, also, often results in after life from pressure occasioned by wearing stays.

For several weeks previous to delivery the entire breast and chest should be bathed with cold water daily, and afterwards well dried and rubbed with coarse towels. If there is tenderness or slight excoriation, much benefit will be derived from bathing with diluted tincture of *Arnica*, or brandy, twice a day. When a high degree of inflammation of the nipples exist, with aching or acute pains, shooting into the mamma, the internal administration of *Aconite* or *Chamomilla*, will generally afford relief. In some instances *Silicea* or *Sulphur* may be required.

The swelling, burning, itching, cracks and eruptions will be removed by *Lycopodium*, *Mercurius*, *Hepar* or *Sulphur*.

FALSE PAINS.—Women frequently suffer previously to the setting-in of labor, with what is termed false pains. Generally these pains precede labor but a few hours; occasionally, however, they come on some days or even weeks before delivery.

They differ from labor pains chiefly in the irregularity of their recurrence, in being unconnected with uterine contractions, and principally confined to the abdomen, which is tender to pressure and movement, and in

*not increasing in intensity as they return. In some instances it is exceedingly difficult to discriminate between them and genuine labor pains. In such cases the period of pregnancy will be the chief guide; and when they come on a week or two before labor is expected, they should be checked by the administration of a suitable remedy.

The exciting causes of these pains are congestion of blood to the uterus, a chill affecting the abdomen, mental emotions, errors in diet, clothing, etc.

Bryonia is most suitable when the symptoms have arisen in consequence of a fit of passion, and consist of pains in the abdomen, followed by dragging pains in the back and loins; constipation and irritable temper. They are aggravated by motion.

Nux vomica for pains in the abdomen and back, like those under *Bryonia*, also when there are pains as if from a bruise in the region of the pubes; constipation. The pains occur chiefly at night. Applicable to passionate persons, and especially when the exciting cause appears to be indulgence in stimulants, such as highly seasoned food, wine, coffee, etc.

Pulsatilla, pains in the abdomen; pains in the loins, as if from continued stooping, with a feeling of stiffness and painful dragging and aching in the thighs, constipation or diarrhœa; most applicable to mild tempered persons, and when arising from eating rich or fat, indigestible food.

Dulcamara when the pains originate from cold, the effects of chill or dampness, and are acute and violent in their character, and seated in the small of the back; coming on or aggravated at night.

Aconitum is most suitable for young persons of a full habit; when the pains are attended with a full, strong and frequent pulse, with congestion to the head, flushed face and hot skin.

Belladonna for symptoms similar to the last, and after that remedy; and also when the pains are spasmodic in their character.

LABOR. CHILD-BIRTH.

When natural, labor generally takes place at the end of the ninth month of pregnancy. The pains come on at regular intervals of longer or shorter duration, gradually increase in intensity, and the whole process is completed in from four to six hours. Frequently, however, a longer time is required, the sufferings continuing for twenty-four hours, or even a greater length of time; and in other instances again, the labor may not last over half an hour or an hour, it may indeed be terminated by two or three pains—though these later instances are rare.

The ordinary and most correct mode of “reckoning,” to fix the time of labor, is from the last menstrual period—two hundred and eighty days, or forty weeks, from the last menstruation to labor. Other modes, which are less certain, but which may be useful in assisting to form a reckoning in cases in which there is any uncertainty about the last menstrual period, are: the commencement of morning sickness, which generally sets in about six weeks after conception, and quickening, which usually takes place at four and a half months, or twenty weeks from conception. Towards the latter end of pregnancy the child sinks lower down in the abdomen, and the woman becomes smaller round the waist than she had been for some weeks previously.

Labor is often preceded by agitation, nervous tremblings, disposition to shed tears, lowness of spirits, etc. Looseness of the bowels for a day or two before labor, is also a common symptom and should not be interfered with. Flying pains through the abdomen, and frequent inclination to pass water, followed by a slight discharge of reddish mucus called “a show,” usher in the regular labor pains.

Were it not for the acquired habits of civilized life, such as tight-lacing, improper diet, want of proper air and exercise, etc., we would find child-bearing to be comparatively free from the suffering and danger which now so commonly accompany it.

It is attended almost without pain among savage tribes; and those healthy, regular women among us, who pay more attention to the natural development of their frames than they do to forming what some call “a fine figure,” are seldom afflicted with the long train of ills, which custom has almost led us to consider the natural concomitants of child-bearing.

PROTRACTED LABORS.—Cases frequently occur in which labor is protracted much beyond the usual period, or is attended with a great deal of suffering; such labors are more likely to take place with women in their first confinement, who are already somewhat advanced in life, and those of a slender form and highly nervous and sensitive habit.

The sufferings in these cases may be greatly alleviated by having recourse to the following medicines:

Coffea will generally prove serviceable when the pains are ineffectual and extremely violent, following each other in quick succession, and attended by great agitation, restlessness and tossing about.

Aconitum when the above remedy is insufficient, or when the patient has been in the habit of drinking coffee frequently as a beverage.

Chamomilla, after the above, if required, especially if there is great mental excitement; excessive sensibility to pain; anguish and discouragement.

Belladonna will be of great value in tedious cases of labor arising from a rigid or unyielding state of the parts, which is most liable to occur in the first labor of elderly women; and especially so when this rigidity appears to be owing to spasms of the neck of the uterus. (*Gelsemium* is also useful in this state of affairs.) This remedy is also useful when the labor-pains become feeble or cease entirely, after having been extremely violent for some hours.

Nux vomica when the labor is protracted from the irregularity and insufficiency of the pains, and there is constant inclination to evacuate the bladder and rectum.

Nux moschata if the pains are very irregular, like cramps, not strong; and if the woman has taken cold and has a cool, dry skin.

Opium should be given, if the pains cease suddenly, and congestion of blood to the head, with redness of the face, stupor and snoring take place.

Pulsatilla when the pains are feeble, and occur at long intervals, or when they diminish in strength and frequency as if from insufficient contractile power in the uterus; when the labor pains are attended by spasms of the stomach and vomiting, or with acute pains in the back and loins, and painful drawing sensation in the thighs.

Secale will be beneficial in cases similar to the latter, when that remedy has not proved efficient in increasing the activity of the uterine contractions.

During the progress of labor, the use of drugs and stimulants of every kind should be carefully avoided, as they all prove more or less injurious.

Spirituos liquors are objectionable on account of their accelerating the circulation, and thereby increasing the danger of too great hemorrhage; chamomile tea, from its tendency to produce metrorrhagia; coffee, from its causing high nervous excitement; opium retards delivery by its sedative property; and all drugs are in fact more or less of a stimulating or irritative nature, and therefore objectionable.

SPASMODIC PAINS, CRAMPS AND CONVULSIONS.—In complicated labors we occasionally find spasmodic pains set in, which cause considerable suffering, and often materially retard the delivery. For these affections the following remedies will be most efficient:

Chamomilla if there are very acute pains, mostly of a cutting description, extending from the region of the loins to the hypogastrium, and attended with spasmodic convulsions, redness of the face, particularly of one cheek, with great sensitiveness of the nervous system, and excitement.

Belladonna when there are excessively violent bearing-down pains, attended with convulsive movements of the limbs; great agitation and constant tossing; congestion to the head, with throbbing and distension of the blood-vessels; red and bloated face, and profuse sweating.

Hyoscyamus for severe convulsions with loss of consciousness, great anguish and cries, with oppression of the chest.

Stramonium for trembling of the limbs, and convulsions without loss of consciousness.

Ignatia when there is a confused feeling in the head; spasmodic and compressive pains, with sensation of suffocation; convulsions.

Ipecacuanha, spasmodic convulsions; paleness or bloatedness of the face; nausea or vomiting.

Cocculus, cramps or convulsions of the limbs or whole body; cramps in the lower part of the abdomen, with heat, redness, and puffiness of the face.

TREATMENT AFTER DELIVERY.

The patient should be kept perfectly quiet, both in body and mind, after delivery; everything which may have a tendency to excite her, such as noise, strong light and odors, even loud talking, should be carefully guarded against. After the lapse of an hour or two, if no untoward symptoms exist, she may be "changed," and "have her bed made." A bandage may be applied immediately after delivery, and without disturbing the patient.

If the labor has been at all difficult, and the patient complains of general soreness, a few doses of *Arnica* may be administered.

Much benefit will also be derived, in case there is much local pain or soreness, from the external application of a lotion prepared by mixing about twenty drops of the *Tincture of Arnica* in half a tumbler of water.

The nervous excitement which is apt to follow delivery, and prevent the patient from procuring the sleep she so much needs, will generally be removed by a dose or two of *Coffea*, or, should it fail and any febrile symptoms be present, *Aconitum* will usually suffice.

FLOODING AFTER DELIVERY.—Directions for the appropriate treatment of this affection will be found under the heading of "Flooding."

The medicines of most value are *Cinchona*, *Chamomilla*, *Crocus*, *Platina*, *Belladonna*, and Tincture of Cinnamon.

AFTER-PAINS.—Very few females escape the suffering occasioned by these extremely annoying pains, although they are of rare occurrence with first children. Generally they become more and more severe after each successive labor; and in some women of nervous temperament, who have borne several children, they are very distressing, while others may have a number of children and never experience any suffering of consequence from them.

In most instances, the administration of one or more of the following remedies will greatly relieve, or remove them entirely.

Arnica, when the pains are not very violent, and are accompanied with a feeling of soreness, with pressure on the bladder and retention of urine.

Chamomilla, if *Arnica* proves insufficient, and the patient is nervous and excitable, with great restlessness, tossing about, etc.

Nux vomica, after *Chamomilla*, will often be serviceable, especially when the pains are of an aching or of a violent colicky description, and occur in choleric persons.

Coffea is valuable when there is nervous excitement and the pain is exceedingly violent in its character, or when the pains are followed by convulsions, with coldness and rigidity of the body.

Pulsatilla is indicated in persons of a mild and gentle disposition, when the pains do not return very frequently, but are protracted and continue for several days.

Belladonna will be useful in cases attended with much bearing-down; fulness about the head; disposition to sleep; tenderness and fulness of the abdomen.

Secale for very weak women, who have borne many children; great exhaustion; complains of burning heat and cannot bear warmth.

DURATION OF CONFINEMENT.—The mother should remain in bed for the first five or six days after delivery; after that she may rise daily and sit up awhile, at first not longer than while her bed is making, but gradually for a longer time.

The diet during this time should be light but nutritious, consisting chiefly of gruel, panada, farina, toast, milk, broths, eggs, and, after a few days, mutton chops or beef steak may be allowed; and everything stimulating, both food and drinks, and all strong odors from flowers or other aromatic substances should be scrupulously avoided.

The first ten days should be mostly spent in bed, or at least in a half-recumbent posture, during which time but few visitors should be admitted. After this period, if the woman feels pretty strong, she may walk about her room,

but should not leave it before the expiration of the second week ; and ought not to attempt to go up or down stairs until the end of the third week after confinement. Some women may be allowed to go about sooner than we have mentioned, whilst others require a longer period to recover from the effects of their confinement, but the physician will be able to judge when it is prudent to allow his patient to resume her ordinary mode of life.

IRREGULARITIES OF THE LOCHIAL DISCHARGE.—The discharges which take place after confinement, are called lochia, and vary considerably in different females, sometimes they are thin and scanty, and cease in a few days, at others they continue for several weeks, and are so profuse as almost to amount to a hemorrhage. In the majority of instances, however, they cease about the tenth day. In color and consistence they at first resemble menstruation, but gradually grow lighter colored, lose the redness entirely, and become successively yellowish and whitish before their final cessation.

When this discharge continues too long, or is too profuse, and also when it is checked suddenly, or suppressed from exposure to cold, errors of diet, or other cause, medical assistance is required.

Crocus is indicated when the discharge is too long-continued in too great quantity, and consists of dark colored or black blood of viscid consistency.

Aconitum is also valuable in too profuse lochial discharges of a deep red color, and will frequently be found sufficient of itself to check them in two or three days without the administration of any other remedies.

Should *Aconitum* be insufficient, *Calcarea carbonica* may follow it with advantage, especially if the discharge be attended with a sensation of itching in the uterus.

Bryonia will be beneficial in cases of suppressed lochia, accompanied by headache ; fulness and heaviness in the head, with pressure in the forehead and temples ; throbbing in the head, aching in the small of the back, and scanty discharge of urine. It is also useful when the lochia are too profuse in quantity and of a deep red color, with internal burning pains in the region of the uterus.

Pulsatilla will be most serviceable for sudden suppres-

sion of the lochia, from mental emotions, exposure to dampness, or any accidental cause, particularly if it is followed by fever either with or without thirst; headache confined to one side; coldness of the feet; frequent desire to pass water. The symptoms are generally worse towards evening, and better in the morning. This remedy is also useful when the discharge is too scanty without being entirely suppressed.

Dulcamara will be useful in cases of suppression occasioned by exposure to cold or dampness, and may either precede or follow *Pulsatilla* advantageously.

Opium and also *Aconitum*, have been recommended for suppression arising from fright, and attended by congestion to the head.

Platina for suppression consequent upon some mental emotion, and accompanied by dryness and over-sensitiveness of the sexual organs.

Belladonna will be serviceable when the discharge continues too long and becomes thin and offensive, producing excoriation of the parts.

Secale has also been recommended under the same circumstances.

MILK FEVER.—Usually about twelve or twenty-four hours after delivery, milk makes its appearance; it may, however, be present at the time of, or even previous to delivery, or it may not appear until a later period than the third day. The coming of this secretion is frequently attended by so much suffering as to require medical attention. The following medicines will be found useful, when administered according to the indications mentioned under each.

Arnica, given internally and the diluted *tincture* applied to the breast in the form of a lotion once or twice a day, will be beneficial when there is much distension, with soreness or hardness.

Aconitum if there is much fever, with hot, dry skin; redness of the face; breasts hard and knotted; restlessness; anxiety and discouragement.

Bryonia after the latter, when the symptoms have been but partly removed by that remedy, and especially if there is oppression of the chest, violent pain in the head, and constipation.

Belladonna may be given after *Bryonia*, when the latter has not been sufficient to remove the symptoms entirely.

Chamomilla will have the preference when there is much nervous excitement, with restlessness; tenderness of the breasts, and inflamed nipples.

Pulsatilla, in severe cases, when there is great distension of the breasts, with soreness and rheumatic pains extending to the muscles of the chest, shoulders, under the arms, etc. A timely administration of this remedy will, in many instances, prevent a threatened attack of child-bed fever.

Rhus toxicodendron, in cases similar to the latter, with rheumatic pains throughout the system; swelling, heat, and hardness of the breasts; headache; stiffness of the joints, and general constitutional disturbance.

A common and good local application to the breasts, is to bathe them with hot lard and afterwards cover them with raw cotton.

SUPPRESSED SECRETION OF MILK.—When from sudden and powerful mental emotions, exposure to cold or dampness, or any cause whatever, the secretion of milk has been suddenly checked and is followed by some internal or local congestion, determination of blood to the head, and the usual train of symptoms which constitute child-bed fever, the immediate administration of *Pulsatilla* will frequently be found sufficient to check the disease at the outset and restore the flow of milk. If any unpleasant symptoms still remain, they will in most cases yield to the administration of *Calcarea carbonica*. If real fever, dry, hot skin, quick, hard pulse, etc., makes its appearance, *Aconitum* should be given, until some amelioration of the symptoms takes place.

In some cases *Bryonia*, *Belladonna*, *Rhus*, *Arsenicum* or *Sulphur* may be called for.

EXCESSIVE SECRETION OF MILK.—It sometimes happens that the secretion of milk is too abundant, causing painful distension of the breasts and involuntary emission of milk, followed by emaciation and debility. In cases of this description, *Calcarea carbonica* will generally give relief, or if it should fail, *Phosphorus* or *Rhus*.

INVOLUNTARY EMISSION OF MILK.—Occasionally females are very much annoyed for some time after confinement by the constant escape of the

milk, which keeps them continually wet, and makes them very liable to take cold on the slightest exposure.

Unless it is owing to some organic defect of the nipple, the following remedies will generally relieve it.

Cinchona when it is caused by debility from loss of fluids.

Rhus if from over-distension in consequence of excessive secretion of milk.

Calcarea carbonica, or *Pulsatilla*, may also be useful in some instances.

DIARRHŒA DURING CONFINEMENT.—Diarrhœa in lying-in-women is a state to be looked on as highly injurious, and means should be taken to remove it as speedily as possible.

Dulcamara will generally be sufficient, when the diarrhœa has been caused by a check of perspiration, produced by chill from exposure to cold or dampness; if the diarrhœa is worse in the afternoon or at night, the pains cease after an evacuation.

Pulsatilla if accompanied by much ineffectual straining, if it makes the parts sore, or if there is only a discharge of mucus with pain in the anus, chilliness; the diarrhœa occurs mostly in the night, or early in the morning.

Rheum if the stools smell sour or fetid; if there is much straining and pain after an evacuation; mostly towards night; if there is great weakness and fear of death.

Antimonium crudum, if worse in the night and early in the morning; tongue coated white, with eruptions; for women, who are easily moved, or who are morose.

Secale for offensive, very weakening diarrhœa.

Phosphoric acid, in obstinate, protracted cases, when the discharge is watery, or painless and almost involuntary.

See also, for other remedies which may be required, the article "Diarrhœa," in a preceding chapter.

CONSTIPATION.—It is natural for the bowels to remain inactive for a few days after delivery, and nothing should be given to disturb this state, as it is at all times a good symptom and serves to promote the strength of the patient. Purgative medicines should in no case be given during confinement, as they can do no good whatever, and are often highly injurious to the patient. If, after the lapse of five or six days, the patient complains of fulness of the head or pain in the bowels, a dose or two of *Bryonia* will

generally bring about an evacuation and afford relief. Should this be insufficient, *Nux vomica*, *Sulphur*, or some other of the remedies recommended under "Constipation," may be given. If after waiting a day or two, no evacuation takes place, give an injection of lukewarm water.

RETENTION OF URINE.—Sometimes after delivery, particularly with first children and in difficult labors, there is retention or painful emission of urine. The administration of one of the following remedies will generally afford relief: *Arnica*, *Pulsatilla*, *Cepa*, *Belladonna* or *Nux vomica*. See Chap. X. Sitting over a pan which contains warm water, will often have the desired effect.

SORE NIPPLES.—The chief difficulty in the way of healing sore nipples, arises from their being constantly torn open afresh by the efforts of the child in sucking.

In the majority of cases, if proper attention is paid to the preparation of the breasts previous to confinement, by bathing them with cold water, or a weak solution of *Tincture of Arnica*, as recommended under the heading of "Preparation of the Breasts," this soreness may be prevented.

When, however, there is a tendency to tenderness and excoriation, the internal administration of *Arnica*, and bathing the nipples with a solution consisting of about ten drops of the *Tincture of Arnica* to half a tumbler of water, several times daily, will mostly remove it. Should this be insufficient, it will be necessary to resort to *Sulphur*, *Calcaria carbonica*, or some other remedies calculated to correct the constitutional taint to which this disease generally owes its origin.

Washing the nipples with cold water every time the child has taken the breast, and then sprinkling them with powdered gum Arabic, or still better with finely powdered white sugar, will be found very beneficial.

Sulphur, when the nipples are sore and chapped, with deep fissures around the base, which bleed and burn like fire.

Calcaria in cases similar to *Sulphur*, when the latter fails to relieve.

Nux vomica for soreness of the nipples with painful excoriation of the adjacent parts.

In obstinate cases, *Lycopodium*, *Mercurius* and *Silicea* will be found valuable.

GATHERED BREASTS.—Inflammation and suppuration of the breasts are liable to occur during the whole period of nursing, and may arise from numerous causes, such as cold, passion, fright, bruise, etc. Putting the child too late to the breast, or the sudden stoppage of suckling—from death of the child or other reasons—frequently occasions distension of the breast followed by inflammation and formation of abscesses.

The most effectual means of preventing suppuration is to keep the breasts well drawn; if the child is unable to do this, nipple-glasses, a common tobacco pipe, or still better the lips of the nurse, or another adult person, should be made use of.

Bryonia is the principal remedy in the commencement, especially when the breasts become swollen, hard, and feel heavy, with shooting pains, dry skin, thirst, and other febrile symptoms.

Belladonna, after *Bryonia*, when there is much swelling and hardness of the breasts; shooting and tearing pains, and redness of the skin, sometimes like erysipelas. These two remedies will generally be sufficient to effect a cure; if, however, some degree of hardness still remains *Mercurius* should be given, and repeated a few times, at intervals of ten or twelve hours.

Hepar when suppuration has already commenced, which may be known by the appearance of throbbings, frequently preceded by a chill.

Silicea in cases in which the discharge becomes fetid, thin and watery, and comes from several openings, which are not disposed to heal. *Phytolacca* in similar cases.

Sulphur in inveterate cases, when there is profuse discharge of matter, with emaciation, fever, etc.

WEAKNESS FROM NURSING.—If the mother cannot sleep well, feels bad in the morning, has no appetite, or perspires much, commences to cough, and is very sensitive to the least breath of air, give *Cinchona*. Her food ought to be altered too, she must eat grits made of barley or oats, chocolate and particularly lentils. If her breath begins to smell feverish, she ought to eat sago, arrow-root or similar things with sugar and drink a little wine, especially in the morning and evening. She should take something nourishing early in the morning and between meals. The child must not be kept at the breast the whole night, it should be accustomed to sleep and nurse at certain regular times.

FALLING OFF OF THE HAIR.—Some females, while nursing, suffer from a falling off of the hair of the head.

The following remedies will be found useful: *Sulphur*, *Lycopodium* or *Calcarea*.

CHAPTER XII.

TREATMENT OF INFANTS.

RECEPTION AT BIRTH.

WHEN the child is born before the arrival of the physician, it should be removed a little out of the discharges, so as to enable it to breathe freely; and if the cord is coiled around the neck, limbs, or any part of the body, it should be immediately disengaged, in order that the circulation between the mother and child may not be obstructed before respiration is fully established in the latter. The mouth and nostrils should also be cleansed from mucus; the readiest method of doing this is with a piece of fine linen or muslin, wrapped round the finger. If, after these things are attended to, the child begins to cry strongly, and the skin changes from a dull, or leaden hue to a pink or rose color, there is no further cause for alarm, as both mother and child may remain in this condition without danger.

As soon as the respiration of the child is fully established, and the pulsations in the cord have ceased, the child may be removed from the mother, provided there is any person at hand willing to undertake it.

The cord should be tied in two places, the first ligature at about an inch and a half from the abdomen of the child, the second three-fourths of an inch from the first, and the cord cut between the two, using for this purpose a pair of scissors. The best ligature is one made of sewing thread, by twisting several threads together; a piece of narrow tape, however, or round bobbin, sufficiently strong, will answer. It should be passed but once around the cord, tied firmly in a hard knot, and the ends cut off.

The child may then be taken up, by placing one hand under the head and shoulders, and taking hold of the feet with the other, and wrapped in a blanket or sheet moderately warmed and prepared for this purpose.

APPARENT DEATH.

In case the new-born infant does not breathe in a few minutes after delivery, and is apparently dead, means should be immediately taken to revive it. The body and limbs should be wrapped in warm cloths—flannel is preferable—and the hands and the chest gently rubbed with a piece of flannel. If, after a short time, pulsation can be felt in the cord, and the beatings of the child's heart become perceptible, respiration will soon be fully established, and nothing more need be done. But if, after continuing these efforts for five or ten minutes, no pulsation can be felt, the cord should be cut, and the child immersed in a very warm bath, being careful to keep the face out of the water. In this bath rub and squeeze the chest

and limbs gently. Much benefit will also frequently be derived from placing the mouth over the child's mouth, and blowing gently so as to inflate the lungs, closing the child's nostrils at the same time between the thumb and finger, to prevent the air from passing out through the nose. Care should be taken not to force too much air into the child's lungs at once, lest they be injured. After the lungs are filled, the chest should be compressed gently with the hands, or by drawing upon the ends of a napkin which has been previously wrapped round it, to expel the air. These efforts should be repeated several times, allowing a few moments to elapse between each. If no signs of animation are manifested after five or ten minutes, dissolve about as much tartar emetic as will lie on the point of a penknife in half a tumbler of water, and after stirring it well, apply a single drop of the mixture to the tongue of the child, with the point of the finger. If you have the third or higher trituration dissolve a few pellets of these in water as they will answer still better. If no relief occurs in fifteen minutes, repeat the experiment again. If no change takes place after ten to fifteen minutes, put one teaspoonful of the mixture into a cupful of warm water, and use it as an injection. Sometimes putting the infant, alternately, into hot and cold water a few times is of great use.

Infants have sometimes been restored after laboring with them for two or three hours; we should not, therefore, give up our efforts at restoration too soon, as they may ultimately be successful.

WASHING THE CHILD.

This should be done immediately after birth, using for the purpose lukewarm water, a flannel wash-rag, and but a small portion of fine (white) soap. The white unctuous substance, which to a greater or less extent covers the body of every new-born child, and which adheres with great tenacity, is best removed by rubbing the parts covered with it, previous to washing, freely with hog's lard, until the two substances become thoroughly mixed. After the child has been well washed, it should be wiped perfectly dry with a fine napkin.

The practice of bathing children with spirits is highly reprehensible, and should in all cases be prohibited. Intemperance, and blunted moral sensibilities in after life have their foundations frequently laid in infancy by the improper use of alcoholic liquors.

The child should be bathed at least once a day; at first with lukewarm water, gradually lowering the temperature, and after a few weeks using cool water.

DRESSING THE NAVEL.

The proper method of dressing the navel is to fold a piece of soft linen or muslin into four or six thicknesses, making it six or eight inches long

and three or four wide. A hole is to be made through the centre of this, and the cord passed through. The cord should then be tightly wrapped with repeated turns of a narrow strip of linen or muslin, and laid up towards the chest of the child, and the lower end of the linen or muslin folded over it, and the whole lightly secured by the belly-band, which should always be made of a strip of fine flannel. The cord usually comes off from the fifth to the eighth day.

THE MECONIUM.

The first evacuation from the infant's bowels consists of a dark bottle-green colored substance, called meconium. Generally the bowels are moved a few hours after birth, and require no artificial aid: the milk of the mother exciting a mechanical action in the bowels, assists in effecting this object. In case, however, the discharge should be too long delayed, and the child become uneasy and restless, a few teaspoonfuls of warm sugar and water may be given to it, which will generally have the effect desired. Should this not be sufficient, and the child's bowels are not moved as freely or as frequently as they ought to be during the first few days, a dose or two of *Nux vomica*, *Bryonia* or *Sulphur* may be administered to both mother and child. Laxative medicines should never be given to infants for the purpose of purging out the meconium: as to this too common practice of nurses, many chronic diseases of after-life are to be attributed.

SWELLING AND ELONGATION OF THE HEAD.

It is common for the head of the infant to be swollen and elongated immediately after birth, especially when the labor has been difficult and protracted, and occasionally a tumor appears on the back or top of the head. This will generally disappear of itself in a few days. In case the swelling should be extensive, repeated washings with cold water, or a weak solution of *Tincture of Arnica*—three or four drops to half a tumbler of water—will hasten its removal; if not better in two or three days, give *Rhus*.

PUTTING THE CHILD TO THE BREAST.

The child should be put to the breast a short time after delivery, if the mother is able to bear the fatigue. This should be done even if the mother has no milk, as the child will be taught to suck, and the secretion of milk hastened by it. There will also be less liability to sore nipples, distended breasts, and milk fever, and should there be any tendency to flooding on the part of the mother the danger will be lessened, as the sucking of the babe causes the womb to contract more vigorously.

If the coming of the milk should be delayed for a day or two, the child should be nourished meanwhile with fresh cow's milk, diluted with an equal quantity of warm water, and sweetened with loaf sugar. The milk should always be obtained from the same cow if possible. Young infants should never have gruel, pap, panada, or cooked food of any kind.

Always, before applying the child, the nipple should be moistened with milk and water, sweetened water, or saliva. Infants will be benefited by giving them a few teaspoonfuls of cold water every day.

SORE EYES.

Quite young infants are liable to inflammation of the eyes and eyelids. In most instances the lids only are affected at first, but the eye-balls soon become involved if the disease is neglected in the commencement. The most common causes of this affection are: infection from the discharges of the mother, exposure of the eyes to too strong a light, or from taking cold by exposing the child to a draft of air, etc.

If the discharge from the eyes is at all profuse the affection may be of a very dangerous kind and the eyes may be lost. The virulent ophthalmia of infants is highly contagious. The eyes must be kept clean with warm water, washing them out as often as any pus collects.

See what is said under "Inflammation of the Eyes," Chapter II.

The following will generally remove this disorder:

Aconite should be given first, especially if the inflammation arises from exposure of the eyes to too much light; and the entire eye becomes red, and discharges a good deal.

Belladonna, after *Aconite*, when the whites of the eyes are very red; with bleeding from the eyelids; intolerance of light, etc.

Chamomilla when the eyelids are swollen, bleed, and are glued together in the morning with a yellowish secretion.

Mercurius when there is redness of the eyes and eyelids; small yellowish ulcers along the margins of the lids; with discharge of yellowish matter, etc.

Pulsatilla when there is profuse discharge of purulent matter from the eyes, with redness of the whole eye and interior of the lids.

Argentum nitricum is of the most importance when there

is a profuse discharge of creamy pus; the eyelids very much swollen.

Calcareo carbonica and *Rhus* are also useful; compare "Affections of the Eyes."

Euphrasia is also valuable in many cases of this complaint, especially when there is accumulation of matter in the eyes, and intolerance of light.

OBSTRUCTION OF THE NOSE. "SNUFFLES."

The nostrils of infants often become obstructed from a species of catarrh, which prevents them from breathing while sucking.

Nux vomica given at night, will mostly afford relief; if, however, the complaint still continues in the morning, give *Sambucus*.

Chamomilla if the obstruction is attended with much running of water from the nose.

Carbo vegetabilis when the complaint is worse every evening.

Dulcamara when worse in the open air.

Lycopodium is often useful.

Mercurius when there is much sneezing and a thickish discharge from the nose.

Tartarus emeticus if there is rattling of mucus in the chest which is worse at night, along with the running from the nose.

SORE MOUTH. THRUSH.

It is generally produced by want of a proper attention to cleanliness, and by the use of improper food; and hence children raised either partially or wholly by hand, are more liable to this affection than those who are nourished exclusively by the mother's milk. The mouth should be well washed several times a day with cold water.

Mercurius should be given when the disease first makes its appearance, and also in cases where there is much

salivation, and the thrush shows a tendency to ulceration.

Sulphur should follow *Mercurius* when the latter fails to effect a cure after a few days.

Arsenicum will be indicated in bad cases, the two preceding remedies having failed to check the disease, and the thrush assumes a livid, or bluish appearance, attended with great weakness and diarrhœa.

Bryonia and *Nux vomica* may also be useful in some cases.

A common remedy in old-school practice, and one which is homœopathic too in many cases of the disease, consists of powdered borax and loaf sugar mixed in equal parts and applied to the mouth of the child three or four times a day. Or a few grains of the borax may be dissolved in a teacupful of water, and the mouth of the child washed with the solution two or three times a day. This remedy should not, however, be continued too long, lest it prove injurious by aggravating the disease.

SORE THROAT.

Infants are sometimes prevented from sucking by this; they are very eager to take the breast, commence to suck, but as soon as they attempt to swallow they cry and the milk is heard to gurgle in the mouth or runs out of it; they are generally hoarse. If they are very restless, cry before passing water, and have red cheeks, give *Aconite*. If the whole face is red, *Belladonna* or *Rhus*. *Rhus* if the throat is dark red, if they do not perspire, but become very hot towards night and remain dry; if *Rhus* is not sufficient, give *Bryonia*; *Belladonna* if they perspire much; if the throat looks bright red, if the eyes are congested; should *Belladonna* not be sufficient, give *Mercurius*.

JAUNDICE.

This occasionally occurs in infants, and may be known by the yellowness of the whites of the eyes and urine in the commencement, and afterward of the skin of the whole body. The bowels are at times costive, and at others loose, and the stools are generally light or clay-colored. The disease may arise from exposure to cold, or from the injurious practice of administering aperient medicines immediately after birth, and other causes.

Chamomilla may be given first, and in many cases will be of itself sufficient to effect a cure.

Mercurius may follow *Chamomilla* when the symptoms have only been partially removed by the latter, or when that remedy has failed to afford any relief.

Cinchona when there are any symptoms remaining after the use of the foregoing remedies.

Nux vomica if the complaint is accompanied by constipation, and the child is extremely irritable.

EXCORIATION.

Soreness of tender parts seldom arises from not washing the child; it is nearly always a skin-disease, and the child is injured by washing with Castile soap, which hurts and burns the poor infant just as much as soap does you when it gets into your eyes. Wash the infant with *lukewarm water only, without any rubbing* when wiping it dry. Bathing the infant frequently will be of great benefit.

Chamomilla will, in most cases, be sufficient, when it has not been produced by the use of chamomile-tea, taken either by the mother or child, in which case *Pulsatilla*, or *Ignatia*, should be given.

Mercurius, when the excoriation is extensive, and there is yellowness of the skin, which *Chamomilla* has failed to remove.

Rhus will cure it, if red pimples appear on the head.

Sulphur or *Carbo vegetabilis* in obstinate cases.

THE GUM.

The term "gum" or "red gum" is given to an eruption of red pimples, which makes its appearance in early infancy, and chiefly occupies the face, neck and arms; it may, however, extend to the whole body.

The disorder is frequently the result of inattention to cleanliness, keeping the child too warm, and giving it herb teas.

A few doses of *Rhus* or *Sulphur* will generally be sufficient.

RETENTION OF URINE.

This complaint often occurs in young infants, and requires immediate attention. It will generally be removed by *Aconite*. Should this fail, *Pulsatilla* will generally suffice. Consult also the same article in Chapter X.

CONTRACTED FORESKIN.—Contracted foreskin is sometimes cured by habitually holding tightly the foreskin while urinating and allowing the pressure of the water to dilate it.

CONSTIPATION.

Constipation in children is frequently produced by an improper mode of living, either on the part of the mother or wet nurse or child; and when it arises from want of exercise, too much animal food, etc., on the part of the mother or nurse, it may be removed by proper attention to these points. As a general rule, there should be an evacuation from the bowels at least once a day in quite young children; and if delayed longer than this, and *Bryonia*, *Nuxvomica*, *Opium*, *Antimonium crudum*, or another remedy has produced no change, these remedies must be given to the mother or wet nurse. Injections of warm water may also be given. But never use soap; every observing physician must have seen the bad consequences from it when continued for a long time.

DIARRHŒA.

Healthy infants, while sucklings, usually have from three to six evacuations from the bowels in the twenty-four hours; and only when the discharges become more frequent than this, and are changed in character, becoming green and watery, yellow, brown, white and frothy or watery, or mixed with mucus or blood, and the child gives evidence of suffering, does it become necessary to interfere by administering medicines.

Ipecacuanha when the diarrhœa has been caused by overloading the stomach; and especially if accompanied by nausea and vomiting; paleness of the face; frequent crying; the stools of a bilious, slimy, or greenish-yellow color; sometimes blackish, or streaked with blood, and of a putrid odor.

Rheum when the diarrhœa has arisen from acidity, and is attended by flatulent distension of the abdomen; colic; crying and straining both before and after the evacuations, which are frothy, slimy and watery, and smell sour; a sour smell is also emitted from the body of the child, even when the strictest attention is given to cleanliness.

Chamomilla in diarrhœas of a bilious watery, frothy, or

slimy character, and of a whitish, greenish, or yellowish color, sometimes having the appearance of beaten-up eggs, and of an offensive odor, like that of rotten eggs. The diarrhœa is frequently attended by colic, with fretfulness, crying, restlessness and drawing up of the legs toward the abdomen; and redness of the face or of one cheek.

Cinchona in watery, painless diarrhœa with much wind in the bowels, and undigested appearance of the milk in the stools.

Belladonna is frequently indicated in the commencement, when the child is disposed to sleep a good deal, but is restless, and starts up suddenly; the evacuations greenish, small and frequent.

Aconite in diarrhœas attended with much fever. *Opium* or *Aconite* when produced by fright.

In case the diarrhœa should prove obstinate or be accompanied by emaciation, the advice of a homœopathic practitioner should be sought.

COLIC.

Colic is a common affection in young infants. It may be caused by errors of diet on the part of the mother, or by feeding the child with too much or unsuitable food. As before remarked, young infants should be exclusively nourished from the breast, if it is possible; and any departure from this is very likely to be followed by more or less suffering. Exposure to cold, or any cause liable to effect either mother or child injuriously, may induce colic. The attacks are sometimes extremely violent and frequent, so much so as almost to wear out both mother and child; when this is the case, there is generally some constitutional predisposition. It is also frequently attended by diarrhœa.

Chamomilla will be sufficient in most cases, especially if the pain is attended by distension of the abdomen, crying, writhing and twisting, drawing up the legs towards the abdomen, and coldness of the feet. Should this remedy not cure, give *Colocynthis*.

Ipecacuanha, when the colic is attended by sickness and diarrhœa, the stools fermenting and of a putrid odor.

Cinchona for colic with distension and hardness of the abdomen; the attacks are more liable to come on towards evening; screaming followed by laughing.

Nux vomica, when the attacks of colic are attended by costiveness.

Pulsatilla in flatulent colic, with rumbling of wind in the abdomen; shivering and paleness of the face, and tenderness of the abdomen.

SWELLING OF THE BREASTS.

The breasts of infants are sometimes swollen at birth, or some time after; this is frequently caused or aggravated by the highly reprehensible practice of nurses and others of squeezing the breast with the mistaken notion that there is milk, or some matter in them which should be pressed out. Mothers cannot be too careful in warning their nurses against this practice, as in some instances extensive suppuration has been produced by it, resulting in disorganization of the breasts, and in females, destroying their usefulness for ever.

When the breasts are found to be swollen, a linen rag saturated with sweet oil should be applied to them, and in the majority of instances the swelling will disappear in a few days, and nothing else be required. If, however, the swelling should become extensive, and be accompanied by redness and inflammation of the breasts, a dose or two of *Chamomilla*, followed by *Belladonna*, may be required. It may also be necessary to apply a bread and milk poultice in severe cases. When the inflammation and soreness arises from squeezing and pressing the breasts and nipples, *Arnica* should be given. If suppuration has taken place, a few doses of *Hepar* should be given, and followed in two or three days by *Silicea*.

CRYING.

The occasional crying of infants should not be a cause for alarm, as this is the language by which their wants are made known. And hence they cry when they are hungry, need changing, or have lain too long in one position, etc. Only in cases where the crying is excessive, and the usual means of pacifying them fail, we may suppose they are suffering from pain, and should immediately endeavor to ascertain the cause, which will frequently be found to be some mechanical irritation, such as derangement of the infant's dress, or a pin sticking into the flesh, etc.

The most reprehensible, or rather criminal practice is that of giving laudanum, or other preparations of opium, to infants. They will be ruined

in body and mind by it,—they will never be so healthy, or grow to such an age, as they would do without ever having been poisoned in this way; most all of these unfortunate infants become either vicious or simpletons. Good-for-nothing nurses will often, without the knowledge of the parents, give laudanum to infants, in order that they may not be disturbed in their ease and laziness.

When, however, the child continues to cry for a long time without any *apparent* cause,—

Belladonna will frequently prove serviceable, and also when it starts suddenly out of sleep and begins to cry violently.

Aconitum or *Coffea*, if *Belladonna* should fail, will often be successful, especially when the crying is accompanied by uneasiness and heat.

Chamomilla will also frequently be useful, and especially if there be reason to think the crying is caused by earache or headache.

RESTLESSNESS AND WAKEFULNESS.

Restlessness and inability to sleep are generally produced by giving the child injurious food, or overloading its stomach, or by the mother's drinking coffee, wine, etc., or making use of some other improper article of diet. Sometimes it is caused by the child's head lying too high; the head of an infant ought always to lie low.

Coffea will often be sufficient to remove the restlessness, hot skin, etc.

Opium when *Coffea* is insufficient, and there is redness of the face.

Chamomilla, if the restlessness be attended by flatulency and griping, with starts and jerkings of the limbs, or feverishness with redness of one cheek.

Belladonna, when the child appears to be drowsy but cannot sleep, or falls asleep for a few moments and starts up suddenly and cries.

Pulsatilla or *Ipecacuanha*, when the restlessness arises from overloading the stomach.

Nux vomica, if it is caused by either mother or child taking coffee or spirituous liquors.

HICCOUGH.

Hiccough, when long continued, sometimes gives rise to a good deal of uneasiness, especially to young mothers; it is generally caused by exposure of some part, or of the entire body, to the air, even in a warm room, or while dressing or undressing the child. Wrapping the infant up warmly, or giving it the breast, will generally cause it to cease. Should it however continue, the administration of a teaspoonful of water, sweetened with white sugar, may be given; and in case this should fail, a dose of *Nuxvomica*.

SCURF ON THE HEAD.

Children are sometimes troubled with a dark or dirty-looking, unsightly incrustation, which generally makes its appearance on the top of the head, partially covering the scalp. On removing any part of this crust, the skin will be found red and inflamed.

It frequently emits quite an offensive smell, and is always annoying to the child by the irritation and itching it occasions. Removing it forcibly with a fine tooth comb will not cure it, but be more likely to aggravate it; for so long as the diseased state of the scalp remains, it will be reproduced.

It is generally caused by keeping the children too warm, or by inattention to cleanliness, and is seldom found in children whose heads are regularly washed every morning, and after being properly dried, brushed with a soft hair-brush.

Sulphur, administered night and morning for several days, will generally correct any tendency that may exist toward this formation.

The crust may be removed by anointing it well with lard or cosmoline at night, and washing it off next morning with a weak solution of soda. This application may have to be repeated several times.

MILK-CRUST.

This is mostly an affection of young infants, and is characterized by an eruption of numerous small white pustules, appearing in clusters upon a red ground. They generally make their appearance first on the face, particularly the cheeks and forehead, from whence they sometimes spread over the entire body. In a short time they become yellow or dark colored, burst, and form thin yellow crusts.

The eruption is often attended by considerable redness and swelling of the surrounding parts, and with troublesome itching, which renders the child exceedingly restless and fretful, and causes it to rub the affected parts constantly, by which the scabs are torn off, and the disease is aggravated.

Aconitum should be administered first, when the eruption is surrounded by redness and inflammation of the skin, and the patient is very restless and uneasy.

Rhus may follow *Aconitum*, if after the lapse of a few days the eruption appears to be but little improved.

Sulphur will be beneficial after *Rhus*, when the latter fails to produce a favorable change, or when the improvement progresses but slowly. *Viola tricolor* is probably a remedy that cures more cases than any other. In bad cases a weak tea made of the dried plant as found at the apothecaries may be applied daily to the scalp. This in addition to taking the remedy internally.

Hepar, *Arsenicum* and *Lycopodium* may also be serviceable in tedious cases.

SCALD HEAD. RINGWORM OF THE SCALP.

This disease is characterized by circular red-colored patches, covered with numerous small yellowish points or pustules, which do not rise above the level of the skin. These pustules soon break, and form thin scabs. The patches frequently unite with adjacent patches, and assume an irregular and extensive appearance, and sometimes cover the whole head. These incrustations, by accumulation, become thick and hard, and when removed, the surface beneath is left red and glossy, but studded with slightly elevated pimples. By the long continuance of this eruption the hair is frequently destroyed; it is commonly found in children from the age of two years to that of puberty; it is not confined to the scalp, but appears on the face, neck, and other parts of the body, and in such cases is less difficult to cure than when located in the scalp.

This disease is often extremely obstinate; this is especially the case when it has been neglected in the commencement, or treated with washes and unguents, the only effect of which has been to aggravate the complaint, and render the cure much more difficult when proper means are resorted to.

Rhus will generally be the most appropriate remedy with which to commence the treatment, and under its action the disease will often undergo a favorable change.

Sulphur may follow *Rhus*, should the eruption become dry and begin to exfoliate.

Staphisagria, should it become moist and offensive, attended with violent itching, to be followed by *Rhus* again.

Arsenicum must be given, if, notwithstanding the administration of the above remedies, the disease becomes worse, with corrosive discharge, or formation of ulcers; after the action of which *Rhus* will frequently produce a salutary effect.

Should the foregoing remedies be insufficient to effect a cure, it will be requisite to resort to the use of

Hepar, especially when the disease extends to the forehead, face and neck, or when the eyes and eyelids become red and inflamed; or

Bryonia, when the glands of the neck and throat become swollen, red and painful, or if they are swollen and hard without being painful, *Dulcamara*.

Antimonium crudum, will frequently have a salutary effect, especially when a thick scab is formed on the head, and the eruption extends over the entire face, with itching of the whole body.

In protracted cases of the disease, *Calcarea carb.*, *Lycopodium*, and *Sulphur* will often prove serviceable.

Until the disorder is removed, the strictest attention should be given to cleanliness; the head should be gently sponged with tepid water twice a day, the hair kept closely trimmed, and the homœopathic rules of diet closely adhered to.

SPASMS OR CONVULSIONS.

When a child is attacked with convulsions, and no physician is at hand, the lower extremities up to the knees may be immersed in water, as hot as it can be borne, for the space of five or ten minutes, or until the fit appears partially subdued; after which the child should be wiped perfectly dry, and placed in a warm wrapper; if the first immersion is followed by no relief, or a second attack speedily follows, it should be repeated, at the same time cold water may be applied to the head of the child; this course, several times repeated, has often been found to restore children.

When some irritating substance in the stomach or intestines, or constipation is the probable cause, an injection of warm water, or molasses and water, should be given as soon as possible. In the absence of the proper homœopathic medicines, relief may sometimes be obtained by smelling camphor. The chief reliance, however, for the cure of the disease, is in the administration of one or more of the following medicines, carefully selected according to the symptoms and cause, as nearly as possible. The most favorable time for giving the medicine is just as the fit is going off, unless it continue a long time, or the fits follow each other in quick succession, in which case the medicine must be given immediately, without waiting for the fit to terminate.

Chamomilla is indicated, if there is convulsive jerking of the limbs, twitching of the muscles of the face and eyelids, with constant motion of the head from side to side, followed by drowsiness, with the eyes half closed, and loss of consciousness; redness of one cheek and paleness of the other, constant moaning, and craving for drink.

Belladonna, when the child starts suddenly when asleep, or stares about wildly; the pupils are much dilated; stiffness of one or more of the limbs or of the whole body; dryness and burning heat of the forehead and palms of the hands; involuntary discharge of urine after the return of consciousness; the slightest touch sometimes provokes a new fit. The fits are sometimes preceded by smiles and laughter.

Ignatia is the chief remedy in the convulsions of children, especially when the cause is unknown, and the following symptoms are presented; sudden and violent starting from a light sleep with loud screaming, and trembling of the whole body; when the muscles of single limbs are convulsed or there is an occasional spasm of a single muscle here and there in different parts of the body; when the fits return every day at the same hour, or every other day about the same time, and are followed by fever and perspiration.

Coffea is frequently serviceable in weak and nervous children who are subject to convulsions without any apparent cause, other than weakness.

Ipecacuanha, in asthmatic children, when the fits are accompanied by nausea, retching and vomiting or diarrhoea, and the attack is preceded, attended, or followed by stretching of the limbs.

Cina is useful in delicate children who are troubled with worms or in the habit of wetting the bed; spasms of the chest followed by rigidity of the limbs, or of the whole body; and itching at the nose and anus.

Mercurius, for spasms caused by worms, with distension and hardness of the abdomen; tossing and stiffness of the limbs; eructation, salivation, fever and moist skin, and great weakness after the paroxysms. This remedy may precede or follow *Cina* advantageously.

Opium is particularly suitable in convulsions caused by fright, and attended by much trembling over the whole body, tossing of the limbs, and loud screaming during the fits; also when the child lies unconscious as if stunned, or breathes heavily and with difficulty; distension of the abdomen and suppression of the evacuations.

Hyoscyamus, in convulsions caused by sudden fright; with twitching of the muscles of the face and foaming at the mouth.

Rheum, if accompanied by twitching and jerking in the thighs and groins.

Stramonium, in sudden convulsions from fright, or when occurring in fevers or from repelled eruptions, with tossing of the limbs and involuntary evacuations of fæces and urine.

Sulphur is especially serviceable in convulsions arising from repelled chronic eruptions.

TEETHING. DENTITION.

The period of dentition in children is generally attended with more or less derangement of health; greater restlessness than usual, especially at night; flushes of heat and alternate paleness of the face; the gums become swollen and hot; difficulty in sucking; the child frequently takes hold of

the nipple, bites and lets go again; disposition to bite at everything; constant drooling and looseness of the bowels. The two latter symptoms may be looked upon as salutary, by preventing congestion of the brain or lungs, to which all children are more or less disposed at this time.

The first set of teeth are twenty in number, and generally make their appearance in the following order: the two middle lower teeth first, and when the child is about six months old; next the two middle incisors of the upper jaw in three or four weeks after the first; soon after these the two lower lateral incisors below, which are followed speedily by the two lateral incisors above. In about two months or in the 12th or 14th month after these first four jaw teeth appear, two below and two above; shortly after these the eye teeth are cut; and finally, at the age of two or two and a half years, the four back jaw teeth, two above and two below, completing the set.

There is, however, considerable variation from the above regular order and time of teething; some children get their first teeth two or three weeks after birth or indeed are born with them, while others again do not get any teeth until they are a year or more old. In healthy children when due attention has been paid to exercise, diet, etc., the period of dentition will generally be passed with comparatively little suffering.

The mother or nurse during the whole period of dentition should pay particular attention to her way of living, and avoid everything indigestible or stimulating in its nature. She should especially abstain from the use of spirituous and malt liquors, which from their irritating properties are particularly injurious, and are one of the most frequent causes of the sufferings of children at this period.

Lancing the gums, though seldom necessary, may be resorted to in weak, sickly children. The best instrument for this purpose is a gum lancet, the blade of which should be placed over the tooth, and an incision made through the gum to the tooth. In the absence of a proper lancet a pen-knife will answer the same end. It ought, however, never be done until you can see or feel the tooth through the gum.

Aconitum, when there is fever with much restlessness, sleeplessness and pain, as evinced by the child's crying and starting.

Belladonna, in convulsions caused by teething; the convulsion is followed by sound sleep, which continues for a long time, or until another fit comes on. The child starts suddenly from its sleep as if frightened, and looks around as if terrified, with an altered expression of countenance; the pupils of the eyes are enlarged, and the eyes fixed; the whole body becomes stiff; with burning heat in the palms of the hands and in the temples.

Calcarea carbonica, when the teething is too slow in children of light complexion, and who are inclined to be fat.

Chamomilla is particularly adapted to the various diseases of children during the period of dentition, and especially when a child is very uneasy at night; tosses about; wants to drink often; has spasmodic jerks and twitches of the limbs during sleep; starts at the slightest noise; general heat; redness of one cheek and of the eyes; moaning; groaning; agitation; short, quick, noisy respiration and oppression of the chest; hacking cough; mouth dry and hot; diarrhoea, with watery, slimy and greenish evacuations, worse at night.

Cina may be given to children who wet the bed at night, and grind their teeth during sleep and at other times; have hardness and distention of the abdomen; rub the nose, and have a dry cough, resembling whooping-cough.

Coffea, when the child is very excitable; does not sleep; is sometimes fretful and at other times too lively, with some fever.

Ignatia, when there are convulsive jerkings of single limbs; frequent flushes of heat, sometimes followed by perspiration; the child rouses from a light sleep with piercing cries and trembles all over.

Ipecacuanha is very useful in nausea and vomiting with diarrhoea; the stools are mixed, of different colors.

Mercurius is applicable in cases of copious drivelling, redness of the gums, and green evacuations from the bowels, with straining.

Sulphur may be given when the stools are whitish or hot and sour; and excoriate the parts.

SUMMER COMPLAINT.

This disease, so common, and so often fatal, is most prevalent during the summer, and usually commences with nausea and vomiting, followed by diarrhoea. The matters ejected consist at first of food and afterwards of mucus; or there may be mere retching and fruitless efforts to vomit. The

evacuations from the bowels are very frequent and may assume various appearances, sometimes they are greenish, thin and watery, or yellowish, at others whitish or slimy and mixed with blood. Often the food is passed undigested, and the odor is occasionally very offensive.

If the disease continues for any length of time the child loses its appetite, the flesh becomes soft, and the emaciation frequently so great that the skin hangs in folds about the person, fever with evening aggravation sets in, the eyes are sunken and but half closed during sleep. The thirst for cold water is usually very great, and drinks of all kinds are immediately rejected by the stomach. The head and abdomen are hot and the latter generally distended, while the feet and hands are cold.

The most common exciting causes are, improper diet, either on the part of the mother or child, great changes of temperature, improper clothing, want of fresh air, and teething. The latter is probably the most frequent cause, as children are more liable to this disease during their second summer.

At the season in which children are most subject to cholera infantum strict attention should be given to diet, exercise and clothing, both by mother and child. In regard to the diet, everything stimulating, such as vinous and fermented drinks, acids, all highly seasoned food, and most vegetables, should be dispensed with. And in general, the homœopathic regimen as recommended in the beginning of this work, should be closely adhered to. The clothing should be adapted to the season, and changed to suit the changes of temperature, care being taken not to clothe the child too warmly. The rooms should be kept cool and well aired, and the children frequently taken out into the open air.

Children living in large cities will be much benefited by a ride out into the country, or on the water by steamboat.

Cool, fresh air, and daily bathing in cold water, cannot be too much recommended.

Antimonium crudum, when the tongue is coated white or yellow; dryness of the mouth, with thirst; nausea with vomiting, or retching and cough; distension of the abdomen with flatulency; offensive, slimy stools; and frequent passages of water.

Arsenicum, if the child is very weak, pale and emaciated; inflation of the abdomen; cold extremities; loss of appetite; nausea and vomiting; intense thirst; yellow and watery, white or brownish offensive diarrhœa, which is worse after midnight, towards morning, and after eating or drinking.

Bryonia, when the diarrhœa comes on in hot weather, and is accompanied by much thirst; vomiting of food; nausea and vomiting after eating; diarrhœa with colic; the stools have a putrid smell, are white or brownish and lumpy.

Carbo vegetabilis; if *Bryonia* affords but temporary relief give *Carbo vegetabilis*, especially if the evacuations are very thin and offensive; and are attended with burning and much pain.

Dulcamara, if the complaint returns every time the weather gets cool, or takes place after drinking cold water while in a heat; violent thirst for cold water; diarrhœa of a greenish or brownish mucus, worse at night.

Ipecacuanha, if given in the commencement of the disease will often arrest its progress at once. The symptoms which indicate this remedy are chiefly nausea and vomiting of food and drink, or of mucus and bile, attended with diarrhœa of fermented stools with white flocculent particles or tinged with blood; coated tongue; dislike to all food; and extreme thirst.

Mercurius, when the diarrhœa is worse before midnight and is attended with colic, straining at stool, and perspiration; evacuations scanty, greenish, sour, and attended with nausea and eructations; if the children have a great desire for butter.

Calcarea, for diarrhœa, with thin, light colored stools, smelling like bad eggs; vomiting; much sweat on head; belly enlarged.

Cinchona when the diarrhœa occurs after every meal, the stools are very fetid and contain undigested portions of the food, and there is much wind in the bowels.

Nux vomica, if *Ipecacuanha* should not be efficacious in arresting the disease at the outset.

Veratrum, when the weakness from the nausea and vomiting is so great as almost to cause fainting; great exhaustion, vomiting, and diarrhœa; vomiting after swal-

lowing the least liquid; the slightest movement excites vomiting; great thirst for cold water; sensitiveness over the pit of the stomach; colic, with burning and cutting pains in the abdomen; loose, brownish, and blackish stools; and small unnoticed evacuations of liquid fæces.

Sulphur will be valuable in protracted cases, especially when the evacuations from the bowels are frequent and greenish, thin and watery, or whitish and slimy.

RUPTURE OF THE NAVEL. UMBILICAL HERNIA.

This affection sometimes occurs in young children, and may be known by the unnatural protrusion of the navel. It is not often painful unless it becomes large; when discovered to exist, a piece of pasteboard, cork, sheet-lead or other hard substance, should be covered with linen, placed over the navel and secured there by a broad bandage. This, by being constantly worn, will generally remove it.

The rupture at the groin is quite common. *Nux vomica* is the best medicine to be given. A properly adjusted bandage or truss is however of the utmost importance.

DISCHARGE FROM THE EARS.

"Gathering in the ear" is very common in young children.

It is generally preceded by violent pains, giving rise to screaming, rolling and tossing of the head, sudden starting out of sleep and more or less fever. As soon as the "gathering" breaks and matter is discharged, the pain ceases. The discharge is often profuse and difficult to cure. The matter is generally yellow, but occasionally it becomes greenish or dark colored, and extremely offensive.

Belladonna, *Mercurius*, *Chamomilla* and *Pulsatilla*, are the best remedies for the pain.

Mercurius, *Pulsatilla*, *Calcarea carbonica*, *Rhus* and *Sulphur*, for the discharge. The ear should be frequently syringed. See "Affections of the Ears."

HEAT SPOTS. "PRICKLY HEAT."

Infants and young children are frequently troubled with an eruption consisting of small vesicles, generally about the size of a pin's head; they are red and inflamed at the base, and filled with watery fluid. After

breaking, they sometimes form into thin scabs, and occasionally are disposed to ulcerate. There is usually more or less fever accompanying the eruption, which is often very annoying to children, on account of the itching and burning with which it is attended.

The heat of summer is the time at which this eruption is most prevalent; its development is also favored by warm rooms and an excess of clothing. The disorder will generally be removed by frequent bathing and proper attention to ventilation and dress.

When attended by much fever and restlessness, a few doses of *Aconitum* or *Chamonulla* will afford relief. *Rhus* may be given if the eruption is extensive, and *Arsenicum* or *Sulphur*, if *Rhus* should be insufficient. *Sulphur* given at long intervals, will correct the tendency to this complaint.

WHITES OR LEUCORRHOEA OF CHILDREN.

Little girls are sometimes subject to a discharge of whitish mucus from the vagina, like the leucorrhœa of adults. It may be the result of inattention to cleanliness, or proceed from some constitutional or other cause.

Frequent bathing with luke-warm water will generally cause its removal in a short time; or, if this should fail, the internal administration of *Calcarea carb.*, followed if necessary by *Pulsatilla*, will effect a cure.

WEANING.

The most suitable time to wean children is generally when they are at about the age of ten months; by this time the teeth are usually sufficiently developed to chew more solid food, and the mother's milk may be dispensed with.

If the mother is delicate, the supply of milk begins to diminish in quantity and deteriorates in quality, or the menstrual flow reappears, the child should be weaned at an earlier period.

On the other hand, the child should not be weaned while it is suffering much from the irritation of teething, or any other infantile disease, unless the health of the mother renders it absolutely necessary.

As the teeth begin to appear, the child should gradually be accustomed to other food than the mother's milk, so that, when the period for weaning arrives, its digestive organs will be fully prepared for the change of diet.

The most suitable seasons of the year for weaning, are the spring and autumn.

After weaning, the child's diet should consist of simple, but nourishing food, such as bread and milk, arrow root, farina, boiled rusks, etc., and the transition to a more substantial fare should be extremely gradual. (See also page 62.)

The mother, also, after the child is taken from the breast, should be particularly careful in her diet, and until the secretion of milk has ceased, live as low as possible. If the breasts become much distended and painful, they should be bathed with hot lard, and wrapped in raw cotton. It will also be necessary to have them drawn occasionally. At the same time the internal administration of *Pulsatilla* will aid materially in stopping the secretion.

LIMPING. LAMENESS.

This symptom should always be regarded with anxiety, as it may be due to beginning hip-joint disease or knee-joint trouble. A physician should always be consulted if a limp persists over a few days, since even the serious diseases mentioned above are usually curable if treated in the earliest stages.

STUTTERING.

The best time to cure stuttering is in the very beginning. Let the child, several times every day for a little while, breathe slowly and clap its hands during each slow expiration; afterwards, let the child pronounce a few words during expiration, but not during inspiration. Sometimes it is cured by a few doses of *Belladonna*, and afterwards *Mercurius*; or *Platina*, *Euphrasia*, or later, *Sulphur*.

SQUINTING.

See "Diseases of the Eyes."

WETTING THE BED.

Some physicians of the old school, because they cannot cure this complaint, have spread the notion that it is nothing but a bad habit, and that therefore the proper way of curing this bad habit is punishing, or even whipping the children. This is the way to bring up dogs, not children. Wetting the bed is caused in almost all cases by disease, which can be removed by the remedies stated below.

In the first place the children must not eat any food which causes an increase in the quantity of urine, such as asparagus, celery, cucumbers, water-melons, etc.; all sharp, salty and sour things, malt liquors; also tea, coffee and chocolate. In the morning they may take water and milk, or cocoa, but none of these articles at night; they may drink as much water as they like, it will diminish the acidity of the urine. To eat considerable butter at night is often beneficial. Do not let the children go to bed immediately

after supper; take them up about one or two hours afterwards, carry them to where they are in the habit of urinating, and they will soon do so voluntarily. Older children are much benefited by gymnastic exercises, which make the will stronger, and teach them to pay prompt attention. It is often sufficient to get the children accustomed to hold their water longer, but this must be done carefully, for holding the urine too long is dangerous. It is best done while taking a walk, particularly in cold weather. Give older boys a glass to measure their urine in the morning, teach them to overcome the first desire to urinate, and to wait till it returns with pain; let them take notice of time and quantity.

The children are often found lying on their back, and this has been stated to be the cause of the complaint, and it has been foolishly proposed to fasten something on their back. No healthy person sleeps on his back, unless he is very much fatigued, and then only for a while. All healthy children sleep lying on the side.

If, therefore, the children sleep upon the back, they will be benefited by *Pulsatilla*, *Rhus*, *Ferrum*, *Sulphur*, *Calcarea*; or sometimes *Bryonia*, *Cinchona*, *Nux vomica*, or *Ignatia*. If they do not sleep on the back, *Belladonna*, *Mercurius*, *Silicea*, *Cina* or *Causticum*.

Pulsatilla. Tender, gentle children, inclined to weep, who easily turn pale or red; particularly if they have dark hair and eyes, and if fat food does not agree with them; if the urine is offensive; if little girls have the whites, staining the linen; if they put the hands upon the abdomen, or both arms above the head. If they sleep lying upon the belly, compare *Calcarea*, *Colocynthis* and *Belladonna*. In similar cases, or to children who become easily angry or obstinate, and particularly if they put the arms above or under the head, give *Nux vomica*. *Rhus*, in similar cases, if the children have light hair and blue eyes; if the urine is acrid, and passes too quickly even during the day, or runs out drop by drop. (Compare *Belladonna*.) Especially if gymnastic exercises do not agree with them, but they become worse or take cold. If *Rhus* should not be sufficient, give *Bryonia*, particularly if the children are very peevish.

Ferrum for pale, thin, chilly children, whose hands and feet become easily cold; who are sleepy the whole day, or at least early at night, dream much, and do not like to

get up in the morning; who have a constant catarrh in the head or running of the nose; weak eyes, which in the open air are always full of tears; who have, every time they take cold, either diarrhœa or cough. If *Ferrum* is not sufficient, and if the child easily turns red in the face, puts the arms over the head and is restless at night, give *Cinchona*.

Sulphur for pale and, more particularly, thin children with large bellies, and who are constantly unwell, who do not like to be washed, are afraid of being bathed or cry when bathed; who are fond of sharp victuals or cannot get enough sugar. *Sulphur* is the chief remedy, if you cannot come to a determination as to the proper remedy.

Calcareæ, for stout, fat, puffed-up children with red faces, who drink much and perspire easily; especially if they scratch their heads when awaking at night; if in the night they pass water more than once; also if they have during the day a very frequent desire to urinate, passing but little at a time. It is suitable for children with large bellies, if *Sulphur* is not sufficient; also if they sleep lying on the belly or put the arms over the head.

Belladonna if the children do not sleep on the back, or do so but seldom; for self-willed, lively children, who cry easily, who sleep with the arms over the head or with the head bent backwards, or lie upon the belly; particularly if the urine passes involuntarily also during the day, especially when standing; or if the water passes often and in great quantities, and is pale and watery; if they easily perspire, and take cold readily.

Mercurius for similar, also easily-perspiring children, who sometimes become suddenly weak, who have great desire for butter; if the urine is hot and acrid and smells sour.

Silicea for children with light hair and blue eyes, particularly if they often have a swelled neck or boils, or if the ends of the fingers about the nails ulcerate; if wounds heal slowly; if the complaint came on after vaccination.

Cina if they bend the head backwards when asleep, if during sleep they look up dreaming and are afraid; and if the nose itches.

Causticum is an important remedy (for grown persons too), particularly for children with black hair and eyes, if they wet the bed in the first sleep; the urine is acrid; they pass water frequently by day and by night; the urine also passes while coughing, sneezing, walking, etc. For children who can evacuate the bladder and stool only when standing, but not when sitting.

Arsenicum is sometimes suitable when the urine is hot and of a putrid smell; if the children put the arms over the head and lie upon the back.

Hepar if the urine is hot and acrid, and the head is bent backwards during sleep.

Carbo vegetabilis, if the urine is offensive.

Dulcamara, urine offensive, and if wetting the bed has remained after some painful disease of the bladder.

Colocynthis, urine sticky, the children put the arms under or above the head, and turn over upon the belly.

If these medicines should not be sufficient, consult a homœopathic physician. There are sometimes other complaints which have to be taken into consideration, and other remedies.

VACCINATION.

In the former editions of this work I avoided speaking of vaccination. Hahnemann and many of his followers adduce vaccination as a proof of the homœopathic law of cure. A similar disease taken from the udder of the cow prevents the similar small-pox in man. I had different views about the similarity of the symptoms, and believed that it always was an action in the opposite direction of the medicines (*Gegenwirkende in der Arznei*) that effected a

cure, but that the similarity of the symptoms pointed out the best and surest antidote to the disease (*Gegenmittel*). Just as one motion can only be arrested or annulled by another exactly similar one, but in the opposite direction, as we see in the motion of waves, sound, light, just so, I thought, it must be with the motions of life (*Lebensbewegungen*). But vaccination was always a poisoning, even if it terminated favorably. When I therefore raised my voice against vaccination in a letter to Dr. Stapf, June 18th, 1830, printed in his "Archiv," vol. 10, part 2, p. 28, I did not do this until I was able to propose a plan to find a really sure antidote to small-pox. Which proposal, however, unheard-of and strange it might have seemed to be, was nevertheless based upon so correct reasoning, that later experience has always confirmed it. But still, some cases were not cured by this remedy.

During the last twenty years the following three facts have been clearly established:

1. Vaccination protects less and less every year, for although small-pox is called by another name, it is still the same.

2. Vaccination is followed by complaints, which are either sudden and dangerous, or long-lasting and difficult to cure, and which from year to year become more frequent.

3. We learn from year to year a more certain and better way of curing small-pox patients homœopathically.

As long as it must be admitted, notwithstanding fact No. 1, that vaccination, if done in the right way, protects in a great many cases and lessens the mortality in a great measure; as long, or in spite of fact No. 2, a great many children do not get seriously ill after vaccination, and as long as, notwithstanding fact No. 3, some children may yet die of small-pox—so long is an absolute decision impossible, either in favor of or against vaccination. Until, therefore, the homœopathic treatment of small-pox shall have been perfected to such a degree that all cases can be cured

with perfect certainty, vaccination is to be allowed, choosing the lesser of two evils and preferring the more certain remedy; but it must be done under certain strict conditions, and so as to cause the least danger and the greatest protection to the children.

Vaccination should always be done from the arm of a healthy child, whose parents, particularly the mother, are perfectly healthy.* As was at first invariably the case, the lymph must be taken on the sixth, seventh or eighth day after vaccination, from a perfectly developed vesicle, as long as the lymph is yet clear as water, not turbid or purulent.

Puncture the vesicle on the side with a needle or lancet, just between the sunken point and the areola, the red border. As the interior of each vesicle consists of several small cells, a little drop only comes out. This little drop should be at once inserted into a small, oblique cut in the arm of the children. Deep cuts are senseless, and it is not true that they insure a better protection. The number of cuts are of no essential importance; one protects as well as ten. The more cuts are made, the more sick the child will become. Therefore, the younger and weaker a child is, the fewer cuts should be made.

The best time for vaccination is, if the children are otherwise healthy, from the third to the twelfth month, at a time when they are not cutting teeth. If it has to be done at such a time, make only one cut.

In cases of necessity, the lymph may be put into small glass tubes, and so preserved and transported; but in many cases the lymph thus preserved will fail.

Never use the lymph after the ninth day, when it has become thick, turbid or purulent. Still less should the dried-up pus, the scab, be used, which is the worst and

* At this later date of revision it is so easy to procure the *bovine virus* that preference should be given the lymph derived from the heifer, whenever this is possible. That on quills or on ivory slips is the most convenient to use.

most dangerous of them all. The physician, who fifty or sixty years ago, introduced vaccination, cautioned against such vaccination; all vaccinations during the first twenty or thirty years were invariably made with clear lymph.

It cannot be denied, that vaccination with the scab causes pustules, but it is not the less true, that it causes many diseases difficult to cure, or that it does not protect well; the pustule, after vaccination with the scab, does not run the regular course; it is sometimes too fast, and sometimes too slow. Whether dangerous consequences after vaccination with the scab follow or not, is quite accidental; we cannot guard against them, because it depends altogether on the circumstance whether the part of the scab used was putrefied or not. All animal substances, which are in the least putrefied, are dangerous when taken internally, but much more so when introduced into the skin, and through it into the blood. We have no means of knowing whether we have taken putrefied matter or not; it makes no great difference which part of the scab we take, the middle may as well contain putrefied pus as any other part.

As the compensation of the physician, for vaccinating is so poor, in some cases it is even included in the scant fee for treatment during confinement, the bad habit of vaccinating with the scab, as the more easy and convenient way, has become so common, that most people do not know of any other method. Nay, there is spread the most reprehensible and erroneous opinion, that the puncturing of the pustule (to obtain the lymph), which, of course, the child does not feel, is dangerous, and lessens the protection; a most senseless and base notion, as every thinking physician admits. Every physician knows that in the beginning vaccination was without any exception done from arm to arm, and that in many countries it is to this day against the law to do it in any other way; and that in those times and countries the protection against

small-pox was and is infinitely greater than for instance, in the United States. This would be impossible, if puncturing the pustule had the least influence upon the children. Why have we small-pox epidemics here again and again, which frighten the whole population of the larger cities? Only because vaccination with the scab gives a quite uncertain protection. And why is it so generally feared here that children will get sick after vaccination? Because every one knows that many children do get sick after vaccination. This is only the case when children are inoculated with the dried-up, half-putrefied matter, and not with the lymph from arm to arm. Even in countries where they scarcely know the word "civilization," nor the meaning of expressions like "great prosperity, greatest good for the greatest number," even there it has never happened that parents made the slightest objection to other children being vaccinated from the arm of their own, successfully vaccinated, children. This new species of disgusting inhumanity was born here, as one of the many evils following vaccination with scabs.

Everywhere, among people of sense, it is considered an honor to a family to have a child which is selected to vaccinate other children from. Now, as from ten to twelve children can be vaccinated from one child without doing it the remotest injury, and as there will be among them at least one healthy child to vaccinate from again,—there can never be any more want of good lymph, if not caused by the most stupid egotism.

In many large cities there is the most miserable and perverted regulation of paying from the public funds to young physicians a certain sum for each child vaccinated, without requiring any proof, whether, how, and with what success it has been done. This money could be spent for a much better purpose, if the poor were invited to take their children to a certain place to be vaccinated, and if they did, to return after six or eight days to have

the children examined; and if a certain sum of money were paid to the parents of each perfectly healthy child, from which others could be vaccinated, each physician might take a healthy child to others which have to be vaccinated.

Hahnemann has proposed to give to every vaccinated child a dose of *Sulphur* as soon as the pustule is formed, and if an eruption breaks out on any part of the body when the pustule is drying up, another dose.

To give *Aconitum* for the fever after vaccination is injurious, as shown in many cases.

The best remedy, confirmed by hundreds of cases, for bad consequences of vaccination, is *Silicea*. It is serviceable for eruptions, swelled glands under the arm, or boils on the head; for very red, inflamed and suppurating swelling of the arm, extending sometimes to the shoulder-joint, which brings the child into great danger; also for long-lasting complaints: hectic fever, with cough, night-sweats, tetters in different places, red pimples on the face, and particularly on the neck, and even for convulsions, which follow one or two weeks after vaccination; also for "water in the head," which has come on rapidly after the drying of the pustule.

CHAPTER XIII.

ERUPTIVE FEVERS.

WHEN an eruption is accompanied by fever, the patient must be careful not to take cold, but at the same time he should not keep himself too warm; either may prove injurious. When there is no fever attending the rash, the complaint is not of a serious nature, yet cold should be guarded against; if the patient takes cold, notwithstanding, resort should be immediately had to medicine.

All cases of eruption attended with fever, which has been suppressed,

require the same remedies which are prescribed for the eruption itself; if not clearly characterized, give *Ipecacuanha*, followed by *Bryonia*, *Cuprum*, then *Sulphur*, then *Calcareo* in very severe cases.

A homœopathic physician will know at once which of these to choose; those who do not know which to choose may try one after the other at intervals of about an hour.

When an eruptive disease is prevalent in the neighborhood, or is even in the house, and several individuals are taken ill at the same time without a corresponding eruption, but with a feeling of contraction about the chest, difficulty of breathing, frequent giddiness, trembling, faintness, sickness at the stomach, vomiting, griping, diarrhœa, great uneasiness, fainting and other symptoms, give *Ipecacuanha* to bring out the eruption, or prevent the disease altogether.

MEASLES.

Measles are usually preceded by catarrhal symptoms, such as profuse watery flow from the eyes and nose; short, dry and distressing cough; the eyes have a peculiar watery appearance, and become more or less inflamed.

The fever at times becomes very high; nausea and vomiting often set in, and there is pain in the pit of the stomach on pressure. The eyes are more sensitive to light; the cough more violent and accompanied by hoarseness and difficulty of breathing, and a feeling of tightness across the chest.

In from two to five days the eruption appears as small red spots, of an irregular shape, the size of a lentil and slightly raised above the surface. The eruption makes its appearance in the throat about twenty-four hours before it is seen externally on the skin; here it is usually first seen about the head, near the borders of the hair, and on the temples; then on the forehead, face and neck, from whence it spreads to the trunk and limbs.

If you press your finger upon a single spot, the redness will disappear, but after taking off the finger, the redness will return, first in the middle and thence spread to the margin; in other similar diseases, the redness returns in the reverse order, first on the margin and then in the middle.

The red spots generally run together in patches; in about five days from its first appearance it begins to die away, and gradually disappears in the same order as it advanced. The cuticle (thin skin) sometimes comes off in small bran-like scales, and the cough and other catarrhal symptoms yield.

Aconitum, the chief medicine in this complaint, is especially indicated when the fever is violent, with hot, dry skin; heat in the head; giddiness; redness of the eyes and dread of light, and great weakness.

Pulsatilla, when the catarrhal symptoms predominate,—

when the eruption is tardy in coming out; if it fails to produce an abatement, *Sulphur* should be given, and afterwards *Aconitum* again.

Belladonna, when the throat becomes sore, attended with thirst, difficulty of swallowing, shooting and pricking pains in the throat; and also when there is dry, barking or spasmodic cough, worse at night, with rattling of mucus; likewise in those cases where the eruption does not appear, but there is headache and great inflammation of the eyes; congestion towards the head.

Euphrasia, when the catarrhal symptoms, cough and inflammation of the eyes, with great watering, are very prominent.

Ipecacuanha is most serviceable in arresting the vomiting; also when there is oppression of the chest.

Bryonia, when the eruption is imperfectly developed, or when there is congestion to the chest, with shooting pains or stitches, increased by taking a deep inspiration; and violent dry cough. *Sulphur* in cases of congestion or inflammation of the lungs. *Arsenicum* will be required if the sickness or vomiting and oppression of the chest remain after the use of *Ipecacuanha*. In the severe cases, with typhoid symptoms, *Arsenicum*, *Bryonia*, *Phosphorus* and *Rhus* will be useful.

Measles frequently leave behind diseases more dangerous than themselves; consequently great care is required in the after treatment.

In scrofulous children, troublesome swelling and inflammation of the glands, especially those of the neck, are apt to occur; or the eyes may be affected with diseases, difficult to cure, and the foundation be laid for consumption of the lungs.

A form of disease known as German measles has been somewhat prevalent in this country during the past few years. The affection is not serious, and requires according to the symptoms the same remedies as the true measles. It is to be distinguished from measles by the appearance of the eruption, which is frequently somewhat similar to that occurring in scarlet fever. The absence too of bronchitis is notable, and the mildness of the entire attack is conspicuous.

From scarlet fever an attack of German measles is recognized by the

slight degree of fever and particularly by the presence of catarrhal symptoms, which are absent in the former disease.

For the cough which frequently remains after measles, *Bryonia*, *Sulphur*, *Causticum*, *Hyoscyamus*, *Drosera*, and other remedies, recommended under "Cough," are serviceable. Swelling of the glands in the neck requires *Arnica*, *Dulcamara* or *Mercurius*. Burning and itching of the skin, *Nux vomica*, *Sulphur* and *Arsenicum*. Tenderness of the skin, *Mercurius*.

When measles are prevailing as an epidemic, the administration of *Pulsatilla*, every two or three days, on the first appearance of catarrhal symptoms, should the disease be taken, may render it milder.

SCARLET FEVER, SCARLATINA.

In scarlet fever the skin is of a bright red or yellowish-red color, or like that of a boiled lobster, though it may be of a dusky red or purplish color. The eruption fades in a few days and in about a week the skin begins to peel off.

The disease often commences with nausea and vomiting; slight chills or creepings, followed by great heat of skin and thirst, and occasionally headache, and more or less stupor or delirium. The eruption appears at first most on parts that are covered and later on other parts.

The fauces are also of a red color; the tongue is generally covered with a white coating, with enlarged red points.

The throat is usually considerably affected, these symptoms being often severe from the commencement. The tonsils may be swollen; the whole throat become covered with grey, yellowish, or white membrane; or it assumes a dark hue. The breath becomes offensive.

The fauces have sometimes a dark red appearance, without much swelling; and ulceration or gangrene with extensive sloughing may speedily take place.

Sometimes an acrid discharge takes place from the nose, the eyes or ears; the glands about the jaws and of the neck become inflamed and swollen.

Scarlet fever sometimes occurs without any eruption on the skin; but instead, the mouth and fauces become affected.

Catarrhal inflammation of the kidneys, commonly known as acute Bright's Disease, is a sequel of scarlatina which is somewhat common; as a consequence of this, dropsy occurs and the results are most serious unless proper

treatment is observed. Another very common result is inflammation of the middle ear, known as "gathering in the head." Discharge of matter soon occurs and much destruction of the hearing apparatus may take place. Deafness frequently follows and in young children it is a not uncommon cause of deaf-mutism.

Aconitum may be administered in the very beginning, before the eruption makes its appearance, when the fever is high, pulse rapid, head hot, hands and feet cold, twitching of the fingers, and tossing about.

Belladonna, in the simple forms of scarlet fever when the eruption is bright red; it should also be given as soon as the throat and tongue become affected with dryness and burning, and there is excessive thirst, but inability to swallow; bright red appearance of the throat and tongue; swelling of the tonsils and stiffness of the jaws and neck, and delirium.

Mercurius after *Belladonna*, when the latter has failed to produce a favorable change, and there is ulceration of the tonsils, with increase of mucus, and swelling of the tongue, throat and tonsils.

Bryonia, when the eruption does not come out well.

Rhus tox. If *Belladonna* has been given without effect and there is delirious talking, with dry tongue and picking at the lips.

Pulsatilla for great restlessness, jerking of the limbs, pains in hands and feet and sleeplessness.

Lachesis, the children are very cross; the eruption is dark in color and scanty, and diphtheritic membrane invades the throat. Should *Lachesis* not be efficient in stopping the progress of the disease, *Lycopodium* may be given.

Arsenicum, when the ulcers of the throat turn livid about the edges, and emit an offensive odor; great thirst, restlessness and extreme prostration of strength, eruption pale and scanty.

In the malignant form, *Arsenicum*, *Lycopodium* and *Phosphoric acid* will be found of most service.

It has been recommended to rub the patient two or three times a day all over with bacon or sweet oil; the children like this rubbing very much, as soon as they know how good it feels.

The diseases which follow scarlet fever are often worse than the original sickness. If the child's neck commences to swell, give *Rhus*. If the glands on both sides of the neck swell, and *Rhus* does no good, give *Arsenicum*; if the glands break, and discharge thin, offensive matter, *Calcarea*. These cases should always be treated by a homœopathic physician.

It is of the utmost importance to guard the children against taking cold, and to be very careful in regard to their diet. As long as the small particles of the skin come off, the children must not go into the open air. At this time it is most contagious. No child having had scarlet fever should be permitted to go with other children under four or five weeks, as the danger of contagion is usually not over until this period has elapsed. The children may be daily washed with bran-water, wear flannel undershirts, and take exercise in the room. They may eat plenty of fruit, particularly apples, but nothing fat. The clothing worn during the sickness must be thoroughly disinfected by means of baking or boiling, the room well cleaned and disinfected, best by burning sulphur in it, and the playthings and books used by the child destroyed or exposed to heat for a long time. The germs of the disease are not easily destroyed, and retain their vitality for weeks or months.

If they should catch cold, and dropsy occur, give *Arsenicum* or *Bryonia*; later, sometimes, *Belladonna* or *Calcarea*. If their skin feels cool, *Carbo vegetabilis*. If they complain of heat, and cannot bear the warm room, and particularly if small blackish particles are deposited by their urine, or if the urine coagulates when heated, like white of eggs, give *Apis*.

Belladonna may be given as a preventive against scarlet fever when it is prevailing as an epidemic; and also in modifying the disease. A dose of the medicine may be taken every day.

SCARLET RASH.

Is the name commonly given to the lighter forms of scarlet fever. The treatment need not differ from that already given, nor must fewer precaution, be taken to prevent the disease being contracted by others.

CHICKEN-POX.

This disease is similar to, though bearing no relationship with, small-pox. The eruption is preceded for a day by a mild degree of fever. Sometimes however, the fever is very great. The eruption appears, but within a few hours develops into vesicles or blisters. The general mildness of the attack, the rapid development of the eruption, the short course of the disease, and the appearance of the vesicles, which do not possess the circle of inflammation about them as in small-pox, and which do not become depressed in the centre, and finally, which leave no scars unless they have been scratched open, distinguish this disease from small-pox.

It generally passes off without requiring any medical assistance; when, however, there is a considerable degree of fever, *Aconitum* may be given; when there is much headache or congestion to the head, *Belladonna*. If the eruption is considerable, *Antimonium tart.*, or *Mercurius* may be beneficial.

SMALL-POX.

Small-pox begins with a great deal of fever, headache and backache, the latter symptom being the most marked. Sometimes convulsions or other severe nervous symptoms occur. The eruption appears at the end of the third day, and consists of small red spots, which are seen first on the face. These present a granular feeling to the touch as if a small shot or seed were under the skin. The eruption then appears on the body and afterwards on the limbs. On the second day of the eruption it changes to a little blister or vesicle, the contents of which change to a milky fluid and the centre of the pock is depressed, though after some days this depression is obliterated. It takes about nine days from the first appearance of the eruption until its full maturity. The full development of the eruption is

marked by an amelioration of all the symptoms, but in a day or two the fever rises again and the second stage or that of suppuration begins. This lasts but a short time and then the pocks begin to dry up. When the eruption is very profuse and the pocks run into one another the term *confluent* is used. These cases are the most serious. When death occurs it is usually between the eighth and the eleventh day. Small-pox is a very serious disease, and in epidemics the mortality is often twenty-five per cent. Under homœopathic treatment, however, it is much less. Keeping the face covered with a cloth mask which is smeared on its under surface with cos-moline is one of the best methods of preventing pitting. The hygiene of the sick room must be of the best. The patient must be kept absolutely clean; the linen changed frequently. During the early stages a low diet and later a very nutritious one is demanded.

Aconitum, if there are congestions to the head or lungs; injected eyes; fulness in the chest, with increased action of the heart; and great restlessness before the eruption.

Belladonna also before the eruption, if there is delirium with headache; red face; inflammation of the eyes, with anxious look; intolerance of noise; and later, if the pustules are too red.

Bryonia. Headache and backache; cough, with soreness in the chest; constipation; or if the eruption is delayed, with a sensation as if the flesh had been bruised.

Variolinum is the most important remedy, and is to be given as soon as the vesicles begin to form, afterwards sometimes *Rhus*, *Hepar* or *Sulphur*.

Mercurius. Sore throat; ulcerations about the eyes and nose; fœtid breath; and pains in the bowels, with perspiration and diarrhœa.

Arsenicum, when the pocks become depressed, and the patients are very restless, anxious, delirious, twitch and throw themselves about; or the belly bloats and is very sensitive to touch, and diarrhœa sets in.

Sulphur, when the pustules begin to fill, and for the itching during the drying stage.

Antimonium tart. is useful, if there is drowsiness with gaping; coolness and clamminess of the skin; or sickness of stomach when the eruption ought to appear. The eruption becomes black.

VARIOLOID.

In varioloid the similarity to *small-pox* is marked, but the disease is not so severe, the eruption not so profuse and of much shorter duration. In short, the disease is a modified small-pox.

Belladonna, if there is headache and coated tongue.

Sulphur, to hasten the drying of the eruption.

But there are many cases which run a longer time, and require remedies like those for small-pox.

CHAPTER XIV.

DISEASES OF THE SKIN.

All chronic skin diseases, such as tetter, salt rheum and the like, ought always to be treated by a homœopathic physician. External remedies are to be used only in exceptional cases, they are often injurious, and remedies should always be first tried given inwardly. Much depends in the manner of living, and often some favorite dish is at fault.

One should bathe often, drink much water, refrain from eating acrid foods; little salt, but rather more sugar.

ITCHING OF THE SKIN.

This is usually a symptom of some other disease by which we may be guided in the choice of a remedy. If, however, the itching appears to be the only or chief symptom, try to alleviate the irritation by brushing the whole body; if this does not answer, by washing with warm water; and lastly, use water with soap. If this does not remove it, take *Sulphur*. When it is worse in particular places, and you cannot keep from scratching them until they bleed, rub these parts with fresh olive oil, so as to moisten the skin in the first place, and then dry it again by rubbing it slowly. When the itching is more troublesome at night, wash the parts in the evening with brandy, but when the whole body is affected, or when women or children suffer in this way, take starch of wheat flour and powder the skin thickly with it. In case where none of these things give relief, take camphor and mix it with the starch, or wash the parts with water in which camphor, previously dissolved in spirits, has been mixed.

Many kinds of itching may be quickly cured by medicines; for instance if it always commences when undressing, *Nux vomica* or *Arsenicum* will generally relieve it; when it is very troublesome after getting into bed, as if caused by insects, and when scratched, moves from one place to another, give *Ignatia*. When it does not commence until the patient has become warm in bed, *Pulsatilla*; if this does not answer, *Mercurius*, particularly when it continues the whole night; if not relieved, give *Sulphur* a couple of days after, and later, *Carbo vegetabilis*; when the itching is accompanied by intense burning, give *Rhus*, or *Apis*, or afterwards *Hepar*; when scratching produces a great deal of bleeding, give *Mercurius* and *Sulphur*, alternately, every week, until better.

ITCH. SCABIES.

It is very easy to get rid of the itch by ointments or other outward applications, it does not require any skill to do this. The suppression of the itch always causes other diseases which appear sometimes directly, sometimes after a few weeks, and in other cases only after years; the later they appear the more difficult they are to cure. It is, therefore, senseless and wrong to expose oneself to such a danger, be the trouble from the complaint ever so great.

Amongst the many kinds of itch which trouble man, there is one caused by the presence of a very small mite under the scarf skin, where it makes its tracks and deposits its eggs, causing the eruption of little pustules. All cleanly persons will observe this the first day. You can see the tracks distinctly enough, but it requires great experience and very good eyes to see the mite.

In the very first beginning, one may always get rid of the itch easily, and without danger, by outward applications.

A good preventive and protection is the balsam-apple; put a few branches of the plant into the bed. Also balsam of Peru, shaken with water as a wash, will drive away the mites and prevent infection. But if the eruption has already appeared, take of the finest powder of sulphur, sold by druggists under the name of milk of sulphur, pour alcohol upon it, shake and let it settle; mix a teaspoonful of the clear fluid with a pint of water, and wash with this mixture all parts which itch. If it gives no relief make it stronger; if you can see their traces, put some of this alcohol upon them with a camel's hair brush. If the pustules are large and full, it is better to shake some common mercury with alcohol and use it the same way.

In cases in which the washing does no good, because there are no mites present, take:

Mercurius, and after a few days *Sulphur*, and so on alter-

ternately; if it gets better do not then take them so often; if it does not improve at all, take other remedies.

Carbo vegetabilis every other day, if the vesicles are small and dry; or *Hepar*, once night and morning.

If the pustules are large, take *Mercurius*; then *Sulphur*, and afterwards *Causticum*, night and morning, in water. If the pustules are large, and become yellow and blue, take *Lachesis*; repeat it as often as the pains get worse.

If it disappears too suddenly, take *Sulphur* or *Arsenicum* until it returns.

ROSEOLA.

Roseola consists of an eruption of rose-colored spots of varying size, greatly resembling measles. There is slight fever, and often some redness of the throat. The eruption fades in a few days, and is attended by no catarrhal symptoms. It frequently depends on some derangement of the stomach or bowels, is more common in warm weather, and is most common in young children. The disease is not serious nor contagious, and usually only needs according to the symptoms: *Aconitum*, *Belladonna* or *Pulsatilla*, for its treatment.

NETTLE RASH. URTICARIA.

As indicated by the name, this eruption looks like the patches or wheals caused by the stings of nettles. The elevations are generally of a red color, with white wheals on the surface. Sometimes, however, there is little or no redness, and the elevated parts are paler than the surface around them.

The eruption is always attended by pricking and itching, especially when the patient gets warm in bed; and it is mostly preceded by nausea or vomiting, loss of appetite, thirst, furred tongue, etc. In some instances, indeed, the skin is very hot and dry, and the pulse greatly accelerated.

This disease may originate from some particular article of diet; in some persons shell-fish invariably produce it; in others it is induced by bitter almonds, vinegar, salad, cucumbers, mushrooms, honey, etc.

Aconitum, if the eruption is preceded by much fever, with hot, dry skin, thirst, furred tongue, hard and quick pulse, restlessness and anxiety.

Dulcamara, when excited by exposure to cold or damp,

when occurring in wet weather, or when attended with some fever, bitter taste in the mouth, diarrhœa at night, foul tongue, and violent itching and burning.

Pulsatilla, when the eruption has been produced by eating unwholesome food, and is attended by looseness of the bowels in the morning. This remedy is particularly suitable for females and persons of a mild temper.

Rhus, when arising from some peculiarity of constitution, in which the attacks are excited by some particular article of food.

Bryonia, when the eruption has suddenly disappeared from the surface, and is followed by difficulty of breathing, pain in the breast, etc.

Belladonna should be given when the eruption is attended by violent headache and red face; the children cry much; the patches are yellowish-red, and rubbing eases the itching.

Apis, if the patches are bluish-red, or pale and transparent, with much swelling, itching, stinging and burning; rubbing cannot be borne at all, or if hard rubbing only gives relief; the children become angry easily.

Hepar, when attended by severe catarrhal symptoms, principally affecting the head, and worse on one side; if commencing on the arms and chest; worse in the open air; for persons of a violent, irritable temper.

Cepa, when accompanied by catarrh; if the eruption begins on the thighs; is better in the open air; for sleepy, fearful and anxious persons.

Nux vomica is indicated when the eruption is excited by indulgence in spirituous or malt liquors.

Arsenicum, if caused by eating unripe fruit, or in severe cases, worse at night, followed by a croup-like cough; also after the disease has been suddenly suppressed.

Calcareæ, when the eruption always appears more after cold washing, or has been suddenly repelled.

Spirits of camphor (a drop on sugar) will sometimes re-

move the disease, when it suddenly comes on after taking acid fruit or vinegar.

External applications of all kinds should be avoided in this as well as in other acute eruptive diseases, as their use is liable to cause a sudden disappearance of the eruption, which may have serious or fatal consequences.

In the chronic forms of this disease, the remedies which have been found useful are, *Calcarea*, *Lycopodium*, *Causticum*, *Sulphur* and *Carbo vegetabilis*.

ERYSIPELAS. ST. ANTHONY'S FIRE. ROSE.

Aconite is indicated in cases attended by much fever, hot, dry skin, thirst, etc.

Bellodonna, in erysipelas accompanied with acute shooting pains, heat and tingling; the redness commencing in a small spot and extending in rays; swelling. It is particularly valuable in erysipelas of the face; excessive swelling, so that the eyes are closed, and the features can scarcely be recognized; headache; thirst; hot, dry skin; restlessness and delirium.

Rhus, if small or large blisters appear; or *Graphites*.

Bryonia, when the disease attacks the joints, and the pain is increased by the least movement. *Sulphur* is sometimes required after *Bryonia*.

Lachesis, if the blisters become bluish.

Apis, if it burns and stings, and if the patients do not like to be touched, become ill-humored, and cannot bear the warm room.

Pulsatilla after *Rhus*, particularly in wandering erysipelas (when the redness disappears in one place, to reappear in another), and the skin is more of a bluish-red; also in erysipelas of the ear; and likewise when the attacks follow some particular articles of food, in persons predisposed to the complaint. *Bryonia* and *Rhus* are also useful in cases of this kind.

Arsenicum, when the erysipelas assumes a blackish hue, with a tendency to gangrene, accompanied by great prostration of strength.

Carbo vegetabilis may in some instances follow *Arsenicum*.

Hepar, *Mercurius* and *Phosphorus* are of importance when the erysipelas terminates in abscess. *Arsenicum* and *Sulphur* in cases terminating in ulceration. And in some of the chronic forms, *Silicea*, *Sulphur* and *Hepar* will prove serviceable, but it is much better to consult a homœopathic physician, even at a distance.

To allay the itching and heat which is sometimes intolerable, cotton wool may be laid upon or wrapped around the affected part, or powdered starch may be dusted over the surface. Greasy applications and washes of every kind should be prohibited, as they almost always aggravate the disease, and may prove highly dangerous by suddenly repelling the eruption.

If erysipelas has been repelled, give *Cuprum*, which is also serviceable if the erysipelas was at first slight, then disappeared and returned in a more violent form.

BOIL. FURUNCLE.

A boil consists of a painful, hard, round, or rather a cone-shaped tumor, which inflames and suppurates; the matter discharged being mixed with blood, and afterwards composed of pus, and a whitish, round, elongated, hard mass called a core is formed.

Some persons have a peculiar constitutional predisposition for boils; they also frequently follow after acute fevers, and other diseases.

Arnica will lessen the pain and inflammation, and frequently prevent their recurrence.

Sulphur in cases where there is a frequent return of boils. By giving *Arnica* while the boil is inflamed and swollen, and a dose of *Sulphur* occasionally, after it has healed, this predisposition may be gradually removed.

Belladonna, if it presents a fiery-red or erysipelatous appearance, or if it is attended by swelling of the glands under the arms, or in the groins, with fever, thirst and headache.

Hepar, in cases where the suppuration is too slow and scanty.

Mercurius, if the suppuration is profuse, and the swelling remains.

Lachesis for very painful boils which become bluish and form rapidly.

CARBUNCLE. MALIGNANT FURUNCLE.

It is larger and harder than a boil, extends further, is of a livid hue and opens in several places; the patient suffers more, generally there is sleeplessness, prostration, want of appetite, etc. After it has opened there is no relief, and finally, portions of the skin and deeper parts slough.

It appears more frequently in old or debilitated persons, and is inclined to appear on the back, near the spine or on the back of the neck. Cases in persons whose general health has previously been undermined, and those which are treated improperly may end fatally.

Arnica given at the very first may lessen the pain, and prevent it altogether; if so, *Nux vomica* will remove the remaining symptoms, particularly in old drunkards.

Arsenicum, as soon as it is spreading, with a burning pain, worse at night; great general weakness; restlessness at night; also when the sloughing is attended with a violent burning pain, and prostrates very much; if the patient is irritable and despairing.

Hepar, if the patient is weakened by the copious discharge; the openings run together and form a large cavity; if there is weakness of voice.

Silicea, pain and burning moderate; the patient not altered in his mind, or of a mild temper; or if he cannot sleep for restlessness and heat in the head; sweat on the head; or if he has a festering skin.

Lachesis if bluish spots or blue blisters appear, or if little sores come out around the larger one.

WHITLOW. FELON.

Poultices of bread and milk, linseed meal, or yeast, sometimes give relief, and are always useful in softening the skin. Applications of warm soft soap, or common brown soap, to the affected part, will occasionally remove the pain and swelling. But in most cases such applications only hasten a superficial suppuration, and make the case more serious and painful in the end.

It is much better to apply nothing but cloths, wet with cold or warm water, whichever agrees best, and keep them wet day and night, while taking one of the following internal remedies:

Mercurius should be given in the commencement, and will often prevent the disease from going on to suppuration. *Sulphur*, taken after it, will frequently complete the cure.

Hepar, when the pain becomes violent, throbbing, and the swelling increases. *Causticum* after *Hepar*, if this did no good at all.

Silicea, if *Hepar* improved it somewhat, but when the pain is intense, and the swelling continues unabated.

Lachesis, in cases where the affected part is of a deep red or bluish color.

Arsenicum should be given if the sore becomes angry-looking or black, with burning pain.

Sulphur and *Silicea*, administered alternately, at intervals of six or eight days, will remove the tendency to a return of the disease.

It may sometimes be necessary, after matter is formed, in order to relieve the sufferings of the patient, to lay open the parts freely with a knife.

ULCERS.

In the treatment of a simple ulcer in a person of sound constitution, all that is necessary is to dress it with some mild and fresh ointment, as for example, cosmoline; spread on lint or on a fine linen rag, to protect it from external injury and prevent the evaporation of pus. In some cases the dry lint alone will answer best, and in others cold bread and milk

poultices are useful. The cold water dressing, linen cloths dipped in cold water and applied to the ulcer, are beneficial in some cases. They must be kept moist by being frequently changed, or by covering them over with oiled silk or gutta percha tissue.

When ulcers are of long continuance, it is best to consult a homœopathic physician. They ought to be healed slowly, otherwise a different and more violent disease may be the consequence. Drying them up with vitriol or white lead or lead-water, is always dangerous.

When the pain is very violent, stinging and burning, it may often be relieved by keeping the part in an elevated posture, and applying cold or warm water, by means of cloths dipped in it, and frequently renewed. In unhealthy-looking ulcers, with a tendency to sloughing, and when the pain is very violent and stinging, a poultice made with yeast and bread will be found useful for cleansing the ulcer and allaying the pain.

Some old indolent ulcers of the legs are only to be cured by perfect rest, or by tightly bandaging the limb, from the toes upwards to above the ulcer, with strips of adhesive plaster.

A later and better method consists in the use of the rubber bandage, of which a particular sort is made especially for this purpose. This same treatment applies to enlarged veins of the legs. These enlarged veins, by the way, are often the cause of the indolent ulcers already spoken of.

For ulcers which burn greatly, give *Arsenicum*; when they burn and smell offensively, *Carbo vegetabilis*; when they spread, and are surrounded by pustules or small ulcers, give *Lachesis*.

Ulcers on the toes, especially of old people, commencing with a blister, as if caused by a burn, are cured by *Silicea*; if, at the outset, there are blue black spots, by *Arsenicum*, especially if warmth is agreeable; but if warmth produces pain, *Secale* is most suitable. In all such cases, the use of salves containing white lead is very dangerous.

Ulcers around an old wart, or around corns and the like, may be cured by *Antimonium crudum*. Ointments of lead or mercury will dry them up speedily, but serious consequences may ensue, as the result of such treatment.

INGROWING TOE NAILS.

Great pain and sometimes ulcers may be caused by the toe nails growing into the flesh. The common remedy is to cut the nail, and particularly in the side where it has grown in; the consequence of this is, that the nail grows the faster there, and in a short time the patient is again in the same predicament. Cutting the nail should only be resorted to when it is of consequence that the patient should walk again immediately; when a little lint, gutta percha or tin-foil, can be introduced with a dull pen-knife between the nail and the skin, it is to be preferred. A handy person may do this himself; soak the feet previously in warm water, which will facili-

tate the operation. When there is much proud flesh, strew some finely powdered loaf sugar or burnt alum on it twice a day, and use the foot as little as possible for a couple of days. At the same time scrape the nail in the middle with a sharp knife, and repeat this operation every day until it is as thin as it can be made without hurting. By these means the sides will heal much quicker, and the nail is more easily bent out, so as to introduce the lint between the skin and the nail. When the edges of the nail are rough, scrape them smooth, but do not cut them.

The only means of curing this evil effectually, is to cut the nail frequently, but not in the shape of the toe, so that the middle projects farthest, but the very reverse. Leave the sides as they are, and cut the centre out as far as possible, as shown in the wood cut. A, the part to be scraped off; B, a linen tape or some linen threads passed under the nail. This need not be done at once, but gradually; bathe the feet every week in warm water, and cut the nail as directed. The nail will in consequence, grow more in the centre and less on the sides; if, after some time, the edges project too much, a trifle may be

cut off; when it injures the stockings, put a leather case over it. Not until after the expiration of a twelve-month, should the nail be allowed to grow out even again, but never cut it very deep or close at the sides, as this is generally the cause of the evil.

The soreness arising from the growing of the nails into the flesh, will mostly disappear as soon as sufficient lint, tin-foil or gutta percha has been introduced between the nail and the flesh; the lint may, in addition, be moistened by water mixed with *Tincture of Arnica*. If this is not entirely effectual, or if the places are becoming ulcerated, *Nux vomica* will act beneficially. If there is already a sore, and the above remedies should not speedily afford relief, do not be induced to have the nail removed or split. This barbarous operation may always be avoided by following the advice given above, and particularly when homœopathic remedies are taken at the same time; among these the principal are: *Sulphur*, *Arsenicum*, *Silica*, and *Carbo vegetabilis*. Select one according to the kind of pains, disposition of the patient, etc.

ABSCESS.

An acute abscess should not be poulticed with warm bread and milk, or linseed poultices, except in extreme cases. It is much better to use nothing but warm or cold water, as in whitlow. *Hepar* or *Mercurius* hastens the suppuration. Under skilful homœopathic treatment, it is hardly ever necessary or advisable to open the abscess with the lancet. *Hepar*, 3d trit., in water, will hasten the breaking open quite sufficiently.

If the suppuration should continue for a considerable length of time, *Silicea*. When hard places remain, *Mercurius* will be useful.

For hard and swelled glands on the neck, and under the chin or ears, *Mercurius*, *Dulcamara*, *Calcareo carbonica*, etc., are principal remedies.

CHILBLAIN. FROSTBITE.

The mild forms of this complaint may frequently be cured by applications of ice water or snow. Covering the part with carded cotton will sometimes, in mild cases, effect a cure. Another application is common glue, prepared by boiling it with water until it becomes of a proper consistency, and then applying it warm to the affected part. Coal oil is likewise an excellent application.

Pulsatilla may be given when the skin assumes a deep red, bluish or livid hue, and is attended by violent burning and itching.

Nux vomica, when of a bright red color.

Sulphur, when the former remedies have been insufficient.

Chamomilla when, in addition to the itching and burning, there are acute pains in the affected part.

Arsenicum, for acute, burning pains; also for the irritable, ill-conditioned ulcers which sometimes occur. They should be dressed with wet rags, covered with oiled silk, until the parts are completely healed. Persons who are troubled every winter with chilblains, should never eat pork or roasted goose.

CORNS.

Corns arise not only from tight boots and shoes, but also from a certain disposition with some persons, which may be lessened by *Antimonium crudum*, *Phosphorus*, *Rhus*, *Bryonia*, *Lycopodium*, *Phosphoric acid*, and *Sulphur*, according to temperament, constitution and other circumstances.

Relief may be obtained by bathing the feet in warm water and paring the corns closely, and applying *Arnica plaster*.

If the corns pain much when the weather changes, take *Rhus*, sometimes *Bryonia* or *Calcareo*.

SORE FEET.

From walking in boots which rub the heel, should be treated with nothing but water, and *Oepa* should be taken internally, they will generally be well in a day or two.

WARTS.

There is always a risk in cauterizing or cutting warts, for although it may frequently be done without apparent injury, dangerous consequences sometimes ensue, especially to children and old people. They will very frequently disappear, when fleshy or seedy, after *Causticum* or *Natrum muriaticum*; when they are flat, hard and brittle, upon taking *Antimonium crudum*; when upon the backs of the fingers, *Dulcamara*; when on the sides of the fingers, *Calcareo carbonica*.

BED SORES.

These may frequently be prevented by placing an open vessel filled with water under the bed of the patient, renewing the water every day; or by bathing the red spots that threaten to become sore, with brandy. Wetting the sore places with very cold water, or applying wet cloths, accelerates the healing. When water alone will not effect a cure, dissolve in it a few drops of *Arnica tincture*; and if there appears to be danger of mortification, give *Cinchona*, and wash the spots with the same medicine dissolved in a little water. When the wound is large, apply scraped sweet carrots to it.

CHAPTER XV.

SOME GENERAL DISEASES.

GOUT.

GOUT is difficult to cure, but the pain may at least be mitigated. The complaints, inevitably produced by the common treatment with mercury, valerian, digitalis, colchicum, opium or laudanum, and other so-called harmless medicines, destructive of human health, are prevented

by homœopathic treatment, and the patient is likewise spared the many tortures of external applications.*

In wine and brandy drinkers, the first attack may be alleviated by *Nuxvomica*; for violent fever, give *Aconitum*, which may also be given after other remedies have been used, particularly *Sulphur*. When the pain in the joints resembles that of a sprain, with redness, dread of being touched, an uncomfortable feeling, as if whatever the limb rested on was too hard for it, *Arnica*; when the redness spreads very much, and is very deep, *Belladonna*; when the pain flies quickly from one joint to another, and relief is felt when the limb is uncovered, give *Pulsatilla*; if the pains become worse after it, give a cup of coffee, repeat the *Pulsatilla*, and as long as it makes it worse continue the coffee. When the pain is mitigated upon covering the limb, and the patient is very weak and much reduced by the disease, give *Arsenicum*; when the face is very pale and haggard, the pain stinging and tearing, worse during the night, and when the limbs must continually be moved from one place to another, *Ferrum* or *Rhus*; when worse from being moved, *Bryonia*; worse from being touched, *Cinchona*; when the complaint is attended with nausea and a white-coated tongue, give *Antimonium crudum*, and afterwards, if necessary, one of the other remedies. When the attacks return at every change of weather, give *Calcarea*; if the complaint becomes protracted, always give *Sulphur*, and if worse again, *Aconitum*; if the limbs remain stiff afterwards, give *Colocynthis*; if they are stiff from old gouty swellings, *Causticum*.

INFLAMMATORY RHEUMATISM.

Aconite if there is high fever, dry, hot skin, thirst and redness of the cheeks; violent shooting or tearing pains, worse at night; redness, or shining swelling of the part

affected; the pains are aggravated by the touch; extreme irritability of temper; disposition to uncover the parts, and relief from doing it.

Belladonna when the pains are chiefly in the joints, shooting or burning; worse at night and on movement; excessive swelling, and shining redness of the affected parts; fever with redness of the face; hot, moist skin and thirst.

Arnica, when the joints feel as if bruised or sprained; hard, red and shining swelling; sensation as if the limbs were resting on some hard substance; feeling as if lame, and a crawling in the affected part; the pains are aggravated by the least motion; great fear of persons approaching, because they might touch the affected part.

Bryonia, if there are shooting, tearing or tensive pains; shifting pains which affect the muscles rather than the bones; red and shining swelling and rigidity of the parts affected; the pains are worse at night and on the least movement; profuse perspiration, or coldness and shivering; much heat, with headache and derangement of the stomach; peevish or passionate temper.

Chamomilla, when there are drawing or tearing pains, with a sensation of numbness or of lameness in the parts affected; the pains are aggravated at night; fever with burning; partial heat preceded by chilliness; hot perspiration; desire to remain lying down; great agitation and tossing about.

Mercurius, for shooting, tearing, or burning pains, which are aggravated at night, especially towards morning, and in the warm bed, or by exposure to damp or cold air; puffy swelling of the affected parts; the pains seem to be seated in the bones or joints; profuse perspiration without relief. *Lachesis* may follow, if *Mercurius* is not sufficient.

Rhus for tearing, burning or wrenching pains, with a sensation of weakness and crawling in the affected limb; red and shining swelling of the joints, with rigidity and

shootings when touched; the pains are worse during rest and in cold or damp weather. *Rhus* is often suitable after *Aconitum*, *Arnica*, or *Bryonia*.

† *Pulsatilla* is serviceable when the pains are aggravated in the evening, or at night in bed, in a warm room, or on changing the position; pains which pass quickly from one joint to another; sensation of numbness in the parts affected; the pains are relieved by cool air; for patients with a pale face and disposed to shiver and be chilly.

Cinchona for pains which are aggravated by the slightest touch; profuse perspiration; great debility, especially from weakening causes, as loss of blood or other fluids.

Hepar and *Lachesis* are frequently serviceable in cases after other remedies which appear to be adapted to the case, but do not give much relief.

When the disease attacks the heart, *Aconitum*, *Arsenicum*, *Belladonna*, *Lachesis*, *Pulsatilla*, *Spigelia*, or *Sulphur*, selected according to symptoms.

CHRONIC RHEUMATISM.—For pains which are excited or aggravated by the slightest chill, *Aconitum*, *Bryonia*, *Calcareo carbonica*, *Dulcamara*, *Mercurius* or *Sulphur*. When the attacks are excited by bad weather, *Calcareo carbonica*, *Dulcamara*, *Rhus toxicodendron*, *Lycopodium* and *Hepar sulphuris*. When every change of weather causes a relapse, *Calcareo carbonica*, *Silicea*, *Sulphur*, *Dulcamara*, *Rhus* and *Lachesis*.

LUMBAGO.—PAIN IN THE LOINS AND BACK.—*Aconitum* if accompanied by much fever.

Arnica if caused by external injury, or by over-lifting, etc.

Bryonia, when the pains in the back are very severe, compelling the patient to walk in a stooping posture; aggravated by the least motion, or draught of air, and attended with a general chilliness.

Nux vomica, when the part affected feels as if bruised, or as after excessive fatigue; and when motion, and par-

ticularly turning in bed at night aggravates the pain; also when accompanied by weakness, constipation and irritable temper.

Rhus, when the pains are similar to those described under *Nux vomica*, but are aggravated by rest.

Belladonna may follow *Aconitum*, when the pains are deep-seated, and cause a heaviness, gnawing, or stiffness.

Pulsatilla, when the pains resemble those mentioned under *Nux vomica*, especially when occurring in persons of a mild disposition.

Mercurius for pains like those described above, but which are much worse at night.

SCIATICA—Is like lumbago; but the pain is more in the region of the hip-joint, shooting down the back of the thigh, and sometimes extending to the foot.

Aconitum, when there is a numbness in the limb or toes.

Colocynthis is particularly useful in this affection, especially when seated in the right hip, or if excited by a fit of anger or indignation.

Rhus, when the pains are aggravated by rest; and better by motion.

Nux vomica, when the pain is attended by a sensation of stiffness or contraction of the limb; also when torpor with chilliness is felt in the affected parts.

Ignatia for cutting pains, particularly on moving the limb.

Chamomilla, when the pains are worse at night, and attended with excessive sensitiveness.

Arsenicum, in cases where the pains are acute and dragging, with a sensation of coldness in the part affected; also when the pains are periodical. It is also useful for weak or emaciated persons.

WRY NECK.

This is a painful rheumatic affection of the neck. It is generally occasioned by exposure to a draught of air, or by turning the head suddenly round.

Aconitum or *Belladonna* may effect a cure. Should they be insufficient *Cocculus*, *Pulsatilla*, *Rhus*, or *Bryonia*, will mostly suffice.

CRAMP IN THE LIMBS.

Cramp in the calves of the legs, the soles of the feet, and in other parts of the body, often disturbs sleep; sometimes it is troublesome during the day. The best means of obtaining relief during an attack is to press the feet firmly against the bedstead or the wall, or to press and squeeze the painful part with the hands. Those subject to cramps in the legs in bed will often escape it if they have their bed made in a slight incline, so that the whole body shall slope a little downwards towards the foot of the bed.

A piece of cold iron held to the place of the cramp will often give relief.

Veratrum, taken at night, before going to bed, for two nights, will generally overcome the predisposition to the complaint. Should, it, however, be insufficient, take *Sulphur* or *Colocynthis* in the same way.

Rhus will be found useful in cramps which occur during the day, especially while sitting.

Rhus or *Hyoscyamus* will cure cramps that come on while pulling off the boots.

Cuprum for cramps, especially at night in bed, affecting chiefly the soles of the feet, and causing the toes to be drawn in different directions.

Lycopodium, in cramps occurring principally when walking.

Colocynthis, for the stiffness and soreness which frequently remain after an attack.

EPILEPSY. EPILEPTIC CONVULSIONS.

Epilepsy, convulsions of the whole body or of single parts, are of such different kinds that it is impossible to here give full directions for curing them; an *homœopathic physician* should always be consulted in these cases.

If the cause that will bring on such an attack is known, give the suitable remedies; *Opium* is not alone suitable, if they are caused by fright, but also if occasioned by reproach, violent scolding and taking offence.

An attack may sometimes be obviated by smelling Nitrite of amyl when the first symptom of its approach is perceived.

During the fit nothing else must be done, smelling salts or liquids and such like articles do no good whatever, the patients are only troubled and weakened by them. Even the homœopathic remedies should not be given during the attack, they must be taken when the worst of the fit is over or has entirely ceased.

NIGHT-MARE.

Persons subject to it should eat but little in the evening, and take light food at all times; drink but little wine, beer or coffee. A good preventive is to bathe every evening; or rubbing the face, neck, the back of the head, the throat, shoulders, breast and abdomen with a wet towel; and drink a glass of cold water before going to bed. At the same time take one of the following remedies

Nux vomica, when the night-mare is caused by indulgence in spirituous liquors, strong beer, too high living, too much confinement, if the patient does not take sufficient exercise in the open air.

Aconitum, when it occurs in children and women, and is accompanied by heat, thirst, palpitation of the heart, determination of blood to the head or chest, oppressed breathing, nervousness, uneasiness, etc. This remedy is also useful for the headache and febrile excitement which often follows the attacks.

Opium, when the patient lies with his eyes half closed, snoring, the mouth wide open, rattling in the throat, the breathing irregular, the face much distorted, and covered with a cold perspiration, and the limbs convulsed.

Pulsatilla, when caused by rich food, cakes, nuts, etc.

Sulphur or *Silicea*, if the attacks return often.

SLEEPLESSNESS.

In most cases when not the result of a disease, sleeplessness may be attributed to the manner of living. Some persons cannot eat anything in the evening, or but a little, without suffering from loss of sleep. Others

cannot sleep soundly unless they have eaten something before going to bed. Exercise in the open air is one of the best preventives, but it must not be taken too late in the evening, or it will have an effect contrary to the one desired. When exciting, agreeable events are the cause, take *Coffea*; when terrible or frightful ones, *Opium*; when agitating ones, *Aconitum*; when the events are tormenting and cause dejection, *Ignatia*, etc.; always select the remedy according to the cause, see "Effects of the Mind."

The most common causes of sleeplessness are the use of coffee and tea for which see the remedies in the early part of this book. When a surfeit is the cause, give *Pulsatilla*; when late reading or singing is followed by wakefulness, *Nuxvomica*; when complaints of the bowels and flatulency *Chamomilla*. When various figures and visions appear before the eyes, and prevent sleeping, *Opium*; and if this does not soon prove efficacious, *Belladonna*. Children are generally benefited by *Coffea*; old people by *Opium*. Sleep is sometimes brought on by rubbing the forehead with the flat hand, particularly if you determine to do this one hundred and one times, if it does no good do not get impatient, but commence anew, and so on. Others fall asleep when they imagine that they are writing the date up on a high, very high wall with a long, very long stick, with tall, very tall letters. Sleeplessness is frequently occasioned by some disease, to which refer under its proper head for the necessary remedies, or consult a homœopathic physician.

DROPSY.

Dropsy may depend on one or more of many causes. Diseases of the heart, lungs, liver, kidneys or peritoneum may induce it, or it may arise from disease of other organs or portions of the body, hence these different kinds of dropsy should always be treated by a homœopathic physician, for there is always time enough to do so.

AGUE. CHILLS AND FEVER. FEVER AND AGUE INTERMITTENT FEVER.

This disease attacks in some places and at some seasons a great number of persons; usually where much wet land is drying, and particularly at the commencement of dry weather in the spring and autumn. If you can remove at such times from these places do so, but if you are compelled to remain there, pay particular attention to the sleeping room. It should be airy and dry; you should open the windows only a few hours in the middle

of the day; put the bed not against a wall, but, if possible, with the head towards the south. Individuals who are compelled to sleep in damp houses, or on the lower floor of houses badly situated, may in some measure be protected by placing a layer of hard coal, broken very small, under their beds.

Advantage may also be derived from wearing silk shirts, and by sleeping between silk sheets, which can be made of old dresses. Powdered sulphur, worn in the stockings, has appeared to prevent the frequent recurrence of the fever in some cases, it may be used until we know of a better preventive.

Particular attention should be paid to the manner of living; eat nothing that lies heavy on the stomach; avoid pastry, things baked or roasted with fat, and all kinds of badly dressed food, eat well cooked meat and vegetables, or meat which has been slowly and properly stewed in a closed vessel, with much gravy without any seasoning except salt. Whilst the fever prevails, pies are very injurious.

Raw ham, but well smoked, like that from Westphalia, with black pepper is more wholesome than when it has been rendered indigestible by being overdone by frying. Everything acid and fat should be avoided at such times; acids are good in the heat of summer; fat may be used in cold weather.

During the cold stage let the patient be well covered with blankets which are perfectly dry; if you have a silk coverlet, wrap it around the lower extremities and abdomen, if the patient finds it agreeable. In the hot stage, linen or muslin makes a better covering. Frequent wiping with a warm, wet cloth also gives much relief in this stage. During the sweating stage, the patient should not be covered too warmly; and after it is over, the linen and bed should be changed. The linen should be well aired and warmed, which is best done by a healthy person rubbing it with his hands, until all the smell of soap is gone; in fact, this should be done with all linen intended for the sick. Those who have not a sufficiency of linen, will do well to lie naked between blankets during the stage of perspiration, and to put on the shirt when this is over.

If the patient complains of thirst, give him as much cold water as he wishes, if good spring water can be had; if the water is bad, give toast and water, it may be either warm or cold. If he prefers it warm during the cold stage, give him toast and water or mucilaginous drinks, such as barley water or thin oatmeal gruel. When the patient vomits much, and feels very weak, give him black coffee. During the hot stage, cold water is the best drink; but if the patient is very ill and craves acids, lemonade or tamarind water may be given in moderate quantities. During the sweating stage the patient should drink nothing but cold water.

At first, intermittent fever causes more trouble, than afterwards, when it shows itself by swelling and hardness below the ribs, generally on the left side. In commencement of the disease it is better not to suppress it by *Cinchona* or quinine, it should be done only in cases of great necessity; at this time it can be best cured by homœopathic remedies. Later, when the

attacks are more violent and the patient feels well in the intervals, the disease is more difficult to cure, and in these cases it may sometimes be suppressed by quinine, though it often has bad consequences. At a still later period, when the spleen and liver are swollen, take care not to use much quinine, it will in most cases only hasten dropsy and other succeeding diseases.

For all fevers which occur in the neighborhood of marshy places, new canals, newly-broken lands, etc., take, as soon as you feel unwell, a dose of *Cinchona*; if no better after twelve hours, take *Ipecacuanha*; after twelve hours *Cinchona* again. If the fever is not prevented in this way, select one of the following remedies.

In this, as in all other fevers, it is necessary to pay more attention to the symptoms, than is done by the old school; observe, how chill, heat and sweat follow one another, when the patient is thirsty, and what he feels between the attacks.

If you cannot find the suitable remedy, give a dose of *Ipecacuanha* after the attack, and repeat it every three to four hours until the next day a few hours before the time the last attack came on; if no attack comes on, give nothing else on that day, but give a dose on the following day, a few hours before the expected attack. If it returns, watch the symptoms and give another remedy. If you have selected one, give it first, after the attack is over; and, second, repeat it a few hours before the time the next attack is expected to return. If the fever had been stopped, but returns again, give first a remedy for the cause of the relapse, and then the remedy, after the administration of which it stopped.

Ipecacuanha is useful in most cases of this disease, and will frequently, when properly selected, of itself effect a cure. When there is any doubt in regard to the choice of a remedy, especially at the commencement of the disease, this remedy may be administered. The following symptoms, however, clearly point to its employment:

much internal chilliness, which is increased by external warmth; little or no thirst in the cold stage, but a great deal in the hot stage; clean or slightly furred tongue; nausea and vomiting, and oppression of the chest immediately before the attack, or during the cold and hot stages.

Arsenicum when the different stages are not distinctly marked, but the chilliness, heat and sweat occur simultaneously, or when there are frequent changes from chilliness to heat, and vice versa; or internal chilliness with external heat; also when the paroxysm is imperfectly developed; when there is little or no sweating, or at least not for some time after the heat has subsided; great prostration of strength; burning pains in the stomach, insupportable pains in the limbs, or all over the body; anxiety and restlessness; excessive thirst; drinking often but little at a time; uneasiness about the heart, or oppression and spasms of the chest; nausea or sickness and vomiting; bitter taste in the mouth; violent headache, continuing after the hot stage; buzzing in the ears during the sweating. All the sufferings of the patient, as the headache, pain in the limbs, etc., are increased during the attack.

Cinchona, if the paroxysm is preceded by nausea; voracious appetite; headache; agitation; palpitation of the heart, or sneezing; thirst during the sweating stage, sometimes continuing all the time between the attacks; chills alternating with heat, or when the heat does not come on for some time after the chills have ceased; sleeplessness or disturbed sleep; great weakness and sallow complexion. It must not be given when there is much thirst during the cold or hot stages. This remedy is valuable in most intermittents in marshy places, and may be given as soon as the first symptoms show themselves, as stated above.

Ferrum, for symptoms resembling the preceding, and also when there is determination of blood to the head; throbbing in the neck and temples; swelling around the

eyes; pressure in the stomach and abdomen, particularly after eating; vomiting of food; tension of the abdomen, and shortness of breath; weakness of the limbs; hardness and fulness in one or both sides of the abdomen, close under the short ribs; swelling of the feet as in beginning of dropsy.

Arnica, when the cold stage generally comes on early in the morning, or in the forenoon, with thirst before the chill; drawing and pain in all the bones preceding the fever; the patient feels uncomfortable in every position, and is constantly changing about; dull or stupid; perspiration and breath offensive.

Veratrum, when there is external coldness with internal heat; cold clammy sweat, particularly on the forehead, and general coldness of the whole body; or chilliness without heat, or chilliness and heat by turns; giddiness; constipation of the bowels, or diarrhœa; sometimes nausea, or vomiting, and pains in the back and loins.

Sambucus, when the sweating is very profuse, and continues until another attack comes on, if it otherwise suits the symptoms stated under *Ipecacuanha*, *Arsenicum*, *Cinchona*, *Ferrum*, *Arnica* and *Veratrum*.

Antimonium crudum is indicated when the tongue is very much furred; bitter and nauseous taste; belching; sickness of the stomach; vomiting; little or no thirst, and constipation or diarrhœa. (See *Pulsatilla*.)

Bryonia, for similar symptoms, but attended with much thirst; or the heat before the chills; red cheeks in the cold stage; yawning, and stitches in the side during the heat; more coldness and chills than heat, and constipation or diarrhœa.

Cina. Vomiting and voracious appetite before, during or after the fever; thirst either during the hot, or during the cold stage; pale face during the cold and hot stage; constant rubbing of the nose.

Ignatia, if there is thirst in the cold, but not in the hot

stage; the chilliness lessened by external warmth; heat of some parts of the body, with coldness and chill of others; heat externally only; pain in the bowels during the cold stage, followed by heat, with debility and sleepiness.

Rhus. The attacks usually come on in the after part of the day, and consist of heat, preceded and followed by chills; coldness of some parts of the body, and heat of others; perspiration after midnight, or towards morning; the heat accompanied by a rash; pain in the bowels, and diarrhœa; pressure at the pit of the stomach; palpitation of the heart, and anxiety.

Nux vomica, when the attack commences with great debility and want of strength, with desire to lie down; giddiness, with a feeling as if drunk; cramps in the muscles of the abdomen or calves of the legs; stitches in the sides; alternate heat and chills, or heat preceding the chills; heat externally and chilliness internally, or vice versa; desire to be constantly covered, even during the hot and sweating stages; external warmth affords no relief; heat and pain in the head; buzzing in the ears; redness of the cheeks; thirst and anxiety during the hot stage; constipation.

Chamomilla is indicated when the tongue is loaded with a white or yellow coating; nausea and bitter vomiting; loathing of food; much thirst in the hot stage, and even in the sweating stage; pressure and uneasiness in the region of the heart; more heat and perspiration than coldness; pain in the right groin, and loose watery stools. (Compare *Antimonium crudum* and *Bryonia*.)

Pulsatilla, particularly when the slightest disorder of the stomach brings on a relapse. It is particularly indicated by absence of thirst during the entire fit, or thirst only during the hot stage; heat and chilliness at the same time; bitter taste in the mouth; bitter or sour vomiting of phlegm or bile; the attacks come on in the

afternoon or evening, and the patient complains of chilliness all the time.

Antimonium crudum. Coated tongue; bitter or bad taste, belching, nausea, vomiting, little or no thirst (compare *Pulsatilla*); constipation or diarrhœa. After *Lachesis*, and if quinine had been taken.

Capsicum. Chilliness preceded for some time by thirst, followed by heat without thirst, or thirst only during the hot stage; chills violent and long continued; begin in back between the shoulder-blades; intense burning, both internally and externally; accumulation of phlegm in the mouth and throat; slimy, burning diarrhœa, and great intolerance of noise.

Coffea, in sensitive persons, who suffer greatly from nervous excitement, even though the fever be but slight; paroxysms of heat and thirst, with flushed face, followed by general perspiration; the thirst frequently continues through the sweating stage; watery diarrhœa.

Cocculus, in agues attended with cramp or spasms of the stomach and abdomen, obstinate constipation, and much nervous excitement.

Natrum muriaticum is one of the best remedies in intermittents, but its effect must be waited for with great patience for several days; violent pains in the head during the chilliness and increasing during the heat; lengthy chills, which begin about 10 A.M.; dimness of vision, and partial loss of consciousness during the hot stage; impaired sight, even after the fever, and during the time between the attacks; chaps and fissures on the lips, particularly at the corners of the mouth; slight fever, continuing through the intermission. (Compare *Arsenicum* and *Ignatia*.)

Lachesis, when the attacks come on in the afternoon and are accompanied by violent pains in the small of the back and limbs; oppression of the chest; violent headache with red face, and continual talking during the hot

stage; or internal chilliness and external heat, with ashy or yellowish color of the face. It is particularly serviceable when a relapse had been produced by the use of salads, vinegar, etc., or after it had been suppressed by quinine, but returns. *Pulsatilla* may follow *Lachesis* in such cases.

Belladonna has been found useful when two or more attacks occur in the twenty-four hours—the cold stage slight, and the hot stage violent, or the reverse, violent chill and slight heat; great sensitiveness, and inclination to shed tears; constipation, or loose and scanty chalk-like stools; sometimes attended with violent congestion to the head, a red face, severe pain in the head, and dulness or stupor.

Hyoseyamus, in cases similar to the latter, but attended by a dry cough at night, worse when lying down, and better when sitting up.

Nux moschata. Tongue white-coated; only in the heat a little thirst; sleep during the cold stage; if external warmth is pleasant, but the open air disagreeable; if all parts upon which the patient lies, soon commence to ache.

Hepar, if a cold or catarrh affects the head and chest; bitter taste in the mouth; chilliness, with thirst, followed by heat, sleepiness. It is often suitable before or after *Belladonna*.

Glonoine if the blood rushes to the head, if there is a feeling as if a waving heat was rising up from the pit of the stomach to the head; beating in the head and cold sweat in the face; if the attack ends with a warm perspiration.

Mercurius, in quickly alternating chills and heat, with restlessness; thirst; palpitation of the heart; profuse, offensive, sour perspiration.

Sulphur when the attacks come on in the after part of the day, with evening chills, fever during the night and sweating in the morning; palpitation of the heart; also if an eruption of the skin has been checked.

Calcaria, when there are alternate chills and heat; external coldness and internal heat; heat in the head and face, with coldness of the limbs, sometimes cold up to the abdomen; giddiness; feeling of heaviness in the head and limbs; violent pains in the small of the back and anxiety. Compare *Sulphur* and *Veratrum*.

Carbo vegetabilis, when the attack is preceded or attended by pains in the teeth and limbs; thirst, only in the cold stage, with vertigo, redness of the face, and sick stomach during the hot stage.

Aconitum, when the chill and heat are both violent; or when they appear together; great external heat, especially of the face and head, and acute pains in the side.

Opium, particularly in intermittents in aged persons, and children. Drowsiness, with heavy sleep, loud snoring, with the mouth open; congestion of blood to the head, with red and puffy appearance of the face; and jerking of the limbs.

INDEX TO THE REMEDIES FOR AGUE.

In marshy places.—*Arnica*, *Arsenicum*, *Carbo vegetabilis*, *Cinchona*, *Cina*, *Ferrum*, *Ipecacuanha*, *Natrum muriaticum*, *Rhus*, *Veratrum*.

In damp, cold seasons.—*Calcaria*, *Carbo vegetabilis*, *Cinchona*, *Lachesis*, *Nux moschata*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

In spring and summer.—*Antimonium crudum*, *Arsenicum*, *Belladonna*, *Capsicum*, *Carbo vegetabilis*, *Cina*, *Ipecacuanha*, *Lachesis*, *Natrum muriaticum*, *Nux vomica*, *Pulsatilla*, *Sulphur*, *Veratrum*.

In autumn.—*Bryonia*, *Cinchona*, *Nux vomica*, *Rhus*, *Veratrum*.

Mismanaged, by large doses of quinine.—*Arnica*, *Arsenicum*, *Belladonna*, *Calcaria*, *Capsicum*, *Carbo vegetabilis*, *Cina*, *Ferrum*, *Ipecacuanha*, *Lachesis*, *Mercurius*, *Natrum muriaticum*, *Nux moschata*, *Nux vomica*, *Pulsatilla*, *Sulphur*, *Veratrum*.

An attack every day.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcaria*, *Capsicum*, *Carbo vegetabilis*, *Cinchona*, *Ignatia*, *Ipecacuanha*, *Lachesis*, *Natrum muriaticum*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

— **every other day**—*Antimonium crudum*, *Arnica*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcaria*, *Capsicum*, *Carbo vegetabilis*, *Cham-*

omilla, *Cinchona*, *Ipecacuanha*, *Lachesis*, *Natrum muriaticum*, *Nux moschata*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Veratrum*.

— **every fourth day.**—*Aconitum*, *Arnica*, *Arsenicum*, *Carbo vegetabilis*, *Ignatia*, *Nux moschata*, *Pulsatilla*, *Veratrum*.

— **every two weeks.**—*Arsenicum*.

— **every year.**—*Arsenicum*, *Carbo vegetabilis*, *Lachesis*.

Coming on in the evening.—*Aconitum*, *Arnica*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*, *Carbo vegetabilis*, *Ignatia*, *Ipecacuanha*, *Lachesis*, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*.

— **in the night.**—*Arsenicum*, *Belladonna*, *Calcarea*, *Capsicum*, *Carbo vegetabilis*, *Chamomilla*, *Hepar*, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

— **in the morning.**—*Arnica*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Hepar*, *Lachesis*, *Mercurius*, *Natrum muriaticum*, *Nux vomica*, *Sulphur*, *Veratrum*.

Chill and coldness only.—*Bryonia*, *Capsicum*, *Cinchona*, *Coffea*, *Hyoscyamus*, *Ipecacuanha*, *Nux vomica*, *Pulsatilla*, *Veratrum*.

Chill and heat, but no sweat.—*Aconitum*, *Arnica*, *Arsenicum*, *Belladonna*, *Bryonia*, *Capsicum*, *Carbo vegetabilis*, *Chamomilla*, *Ignatia*, *Ipecacuanha*, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*.

Chill and sweat, but no heat.—*Arsenicum*, *Bryonia*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

Heat only, little or no chill and sweat.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*, *Coffea*, *Ipecacuanha*, *Lachesis*, *Nux vomica*, *Opium*, *Pulsatilla*, *Sulphur*, *Veratrum*.

Heat and sweat, but no chill.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Capsicum*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Cina*, *Coffea*, *Hepar*, *Ignatia*, *Ipecacuanha*, *Nux vomica*, *Opium*, *Pulsatilla*, *Rhus*, *Veratrum*.

Sweat prevailing.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*, *Carbo vegetabilis*, *Cina*, *Hepar*, *Mercurius*, *Natrum muriaticum*, *Pulsatilla*, *Rhus*, *Sambucus*, *Sulphur*, *Veratrum*.

Chill, heat and sweat, all of the same degree.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Capsicum*, *Chamomilla*, *Cinchona*, *Cina*, *Hepar*, *Ignatia*, *Ipecacuanha*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

Chill then heat.—*Aconitum*, *Arnica*, *Bryonia*, *Belladonna*, *Capsicum*, *Carbo vegetabilis*, *Cinchona*, *Cina*, *Hepar*, *Hyoscyamus*, *Ignatia*, *Ipecacuanha*, *Natrum muriaticum*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

First heat then chill.—*Belladonna*, *Bryonia*, *Calcarea*, *Capsicum*, *Nux vomica*, *Pulsatilla*, *Sulphur*.

Heat and chill, alternating.—*Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*,

Cinchona, *Mercurius*, *Natrum muriaticum*, *Nux vomica*, *Sulphur*, *Veratrum*.

Heat and chill at the same time.—*Aconitum*, *Arsenicum*, *Belladonna*, *Bryonia*, *Calcarea*, *Chamomilla*, *Cinchona*, *Ignatia*, *Ipecacuanha*, *Mercurius*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

—— **heat externally, chill internally.**—*Aconite*, *Arsenicum*, *Belladonna*, *Calcarea*, *Coffea*, *Ignatia*, *Lachesis*, *Nux vomica*, *Sulphur*.

—— **heat internally, chill externally.**—*Arnica*, *Bryonia*, *Cinchona*, *Mercurius*, *Pulsatilla*, *Rhus*, *Veratrum*.

Sweat coming on with the chill.—*Arsenicum*, *Calcarea*, *Nux vomica*, *Pulsatilla*, *Sulphur*.

Chill then sweat without heat.—*Bryonia*, *Capsicum*, *Rhus*, *Veratrum*.

Sweat and heat together.—*Aconitum*, *Belladonna*, *Bryonia*, *Capsicum*, *Chamomilla*, *Cinchona*, *Cina*, *Hepar*, *Ignatia*, *Ipecacuanha*, *Mercurius*, *Nux vomica*, *Opium*, *Rhus*, *Veratrum*.

Sweat after the heat.—*Arsenicum*, *Bryonia*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Cina*, *Coffea*, *Hepar*, *Ignatia*, *Ipecacuanha*, *Opium*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

Thirst before the attack.—*Arnica*, *Cinchona*, *Pulsatilla*, *Sulphur*.

—— **during the chill.**—*Aconitum*, *Antimonium crudum*, *Arnica*, *Arsenicum*, *Bryonia*, *Calcarea*, *Capsicum*, *Carbo vegetabilis*, *Chamomilla*, *Cinchona*, *Cina*, *Hepar*, *Ignatia*, *Ipecacuanha*, *Natrum muriaticum*, *Nux vomica*, *Rhus*, *Sulphur*, *Veratrum*.

—— **after the chill, but before the heat.**—*Arsenicum*, *Cinchona*, *Pulsatilla*.

—— **and heat together.**—*Aconitum*, *Belladonna*, *Bryonia*, *Calcarea*, *Capsicum*, *Chamomilla*, *Cinchona*, *Hepar*, *Hyoscyamus*, *Lachesis*, *Mercurius*, *Natrum muriaticum*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sulphur*, *Veratrum*.

No thirst during the heat.—*Arsenicum*, *Belladonna*, *Capsicum*, *Carbo vegetabilis*, *Cinchona*, *Ignatia*, *Ipecacuanha*, *Lachesis*, *Mercurius*, *Nux moschata*, *Nux vomica*, *Pulsatilla*, *Rhus*, *Sambucus*, *Sulphur*, *Veratrum*.

Thirst after the heat.—*Cinchona*, *Nux vomica*, *Opium*, *Pulsatilla*.

—— **during the sweat.**—*Arsenicum*, *Chamomilla*, *Cinchona*, *Hepar*, *Mercurius*, *Natrum muriaticum*, *Pulsatilla*, *Rhus*, *Veratrum*.

—— **after the sweat.**—*Nux vomica*.

COMPLAINTS ACCOMPANYING INTERMITTENT FEVER.

Pains in the limbs.—*Arsenicum*, *Cinchona*, *Natrum muriaticum*, *Nux vomica*, *Rhus*, *Veratrum*.

Great weakness.—Arsenicum, Cinchona, Ferrum, Hyoscyamus, Lachesis, Natrum muriaticum, Nux vomica, Rhus.

Dropsical symptoms.—Arsenicum, Cinchona, Ferrum.

Drowsiness and sleepiness.—Belladonna, Carbo vegetabilis, Hyoscyamus, Lachesis, Opium, Pulsatilla, Rhus.

Sleep during the chill—Natrium muriaticum, Nux moschata.

—— **during the heat**—Ignatia.

—— **after the chill**—Arsenicum.

Great nervous and mental excitement—Aconitum, Arsenicum, Belladonna, Bryonia, Chamomilla, Coffea, Ignatia, Nux vomica, Pulsatilla.

Rush of blood to the head (with giddiness, delirium, stupor).—Aconitum, Belladonna, Bryonia, Carbo vegetabilis, Glonoine, Hyoscyamus, Lachesis, Nux vomica, Opium, Pulsatilla, Rhus.

Violent headache.—Arnica, Arsenicum, Belladonna, Cinchona, Glonoine, Ignatia, Lachesis, Natrum muriaticum, Nux vomica, Pulsatilla, Rhus.

Deranged stomach.—Antimonium crudum, Arsenicum, Belladonna, Bryonia, Chamomilla, Cinchona, Ignatia, Ipecacuanha, Natrum muriaticum, Nux vomica, Pulsatilla, Sulphur.

Vomiting.—Antimonium crudum, Arsenicum, Bryonia, Cinchona, Cina, Ignatia, Nux vomica, Pulsatilla.

Vomiting during the chill—Bryonia, Ignatia.

—— **after the chill**—Arsenicum, Nux vomica.

—— **during the heat**—Nux vomica.

—— **of bile.**—Bryonia, Ignatia, Nux vomica.

—— **of mucus**—Cinchona, Ignatia, Pulsatilla.

—— **of victuals.**—Ignatia.

Tongue coated white.—Antimonium crudum, Bryonia, Nux moschata.

—— **sticky, dry, during the chill**—Bryonia.

Diarrhoea.—Arnica, Arsenicum, Chamomilla, Cinchona, Ipecacuanha, Pulsatilla, Rhus, Veratrum.

Constipation—Arsenicum, Bryonia, Calcareæ, Mercurius, Nux vomica.

Spleen, hardness of.—Nux moschata.

—— **pain in.**—Capsicum.

Liver, pains and swelling of.—Arsenicum, Cinchona, Mercurius, Nux vomica.

Catarrhal symptoms (cough, etc.).—Aconitum, Belladonna, Bryonia, Cinchona, Hepar, Lachesis, Mercurius, Nux vomica, Pulsatilla, Rhus, Sulphur.

Oppression of the chest and difficulty of breathing—Aconitum, Antimonium crudum, Arnica, Arsenicum, Bryonia, Cinchona, Ferrum, Hepar, Ipecacuanha, Lachesis, Nux vomica, Pulsatilla, Sulphur.

The above accompanying complaints are present particularly :

Before the attack.—*Arnica, Arsenicum, Belladonna, Calcareo carbonica, Carbo vegetabilis, Cinchona, Cina, Ignatia, Ipecacuanha, Natrum muriaticum, Nux vomica, Pulsatilla, Rhus, Sulphur.*

During the chill.—*Arnica, Arsenicum, Bryonia, Calcareo, Capsicum, Carbo vegetabilis, Cinchona, Cina, Hepar, Ignatia, Ipecacuanha, Lachesis, Mercurius, Natrum muriaticum, Nux moschata, Nux vomica, Pulsatilla, Rhus, Veratrum.*

During the heat.—*Aconitum, Arsenicum, Bryonia, Belladonna, Calcareo, Capsicum, Carbo vegetabilis, Chamomilla, Cinchona, Coffea, Hyoscyamus, Ignatia, Ipecacuanha, Lachesis, Mercurius, Natrum muriaticum, Nux vomica, Opium, Pulsatilla, Rhus, Sulphur, Veratrum.*

During the sweat.—*Aconitum, Arsenicum, Bryonia, Chamomilla, Lachesis, Mercurius, Nux vomica, Opium, Pulsatilla, Rhus, Sulphur, Veratrum.*

After the attack.—*Arsenicum, Bryonia, Carbo vegetabilis, Coffea, Ignatia, Lachesis, Nux vomica, Pulsatilla, Rhus.*

Pulse, intermittent.—*Arsenicum, Cinchona, Lachesis, Mercurius, Natrum muriaticum, Nux vomica, Opium.*

—— **apparently wanting.**—*Aconitum, Arsenicum, Carbo vegetabilis, Hyoscyamus, Opium, Veratrum.*

Pulse hard.—*Aconitum, Belladonna, Bryonia, Hyoscyamus, Nux vomica, Sulphur.*

—— **small.**—*Aconitum, Arsenicum, Belladonna, Hyoscyamus, Lachesis, Mercurius, Nux vomica, Opium, Veratrum.*

—— **slow.**—*Belladonna, Cinchona, Mercurius, Opium, Pulsatilla, Rhus, Sambucus, Veratrum.*

—— **hurried.**—*Aconitum, Arsenicum, Belladonna, Bryonia, Hyoscyamus, Mercurius, Pulsatilla, Sulphur.*

—— **irregular.**—*Aconitum, Antimonium crudum, Arsenicum, Bryonia, Cinchona, Hepar, Lachesis, Mercurius, Natrum muriaticum, Rhus.*

—— **full.**—*Aconitum, Belladonna, Bryonia, Ferrum, Hyoscyamus, Lachesis, Nux vomica, Opium, Pulsatilla, Sambucus, Sulphur.*

—— **soft.**—*Carbo vegetabilis, Cinchona, Veratrum.*

—— **trembling.**—*Arsenicum, Mercurius, Rhus.*

CONGESTIVE OR PERNICIOUS FEVER. REMITTENT OR BILIOUS FEVER.

These fevers, like intermittent fevers, are caused by a poisonous air, called miasma. In the commencement they may be treated as stated under *Fever and Ague*. But

they should *always* be treated by a homœopathic physician. If the blood rushes to the head, causing very soon loss of consciousness, *Glonoine* should give relief; seldom *Aconitum*, and still more seldom *Belladonna*, according to the symptoms stated under "Congestion to the Head and Headache."

TYPHOID FEVER.

This disease is one which, like scarlet fever, diphtheria and others, may arise from filth accumulation, bad sewerage, etc. There is, however, no longer any doubt but that the disease is directly propagated by means of the evacuations from the bowels, for the essential feature of typhoid fever is ulceration of a portion of the small intestines; in these ulcerating surfaces the seeds of the disease originate, and possessing strong vitality they resist many destructive influences. Hence in whatever manner these germs of the disease reach the system, they reproduce the disease of which they were the product. Privy vaults into which the dejections of typhoid fever patients have been thrown may drain into a contiguous well, or streams of water may in some way be contaminated by the evacuations; those drinking water from these sources are apt to contract the disease, or possibly the microscopically minute particles which constitute the seeds of typhoid fever may enter a house, being introduced by sewer gas.

Milk sometimes carries the contagion—the vessels of the dairy having been washed in water which is contaminated—and sometimes the disease arises from eating the flesh of cattle suffering from a form of typhoid fever. In caring for patients with this disease the greatest care should be observed in disposing of the fecal evacuations of the sick, for therein lies the entire danger of contagion. Typhoid fever is essentially a febrile disease. In its varied manifestations it runs through a course of several weeks. Many patients succumb to it, though homœopathic treatment saves a larger percentage than any other. Frequently the disease is cut short in the beginning by homœopathic medicines. Attention to the food, giving mainly a milk diet, and no solids whatever, is of the utmost importance. Good nursing and proper feeding are indispensable agents in its treatment, perhaps more so than any other disease. The medicines chiefly used in homœopathic practice are *Baptisia*, *Bryonia*, *Rhus tox.*, *Phosphoric acid*, *Arsenicum* and *Hyocyanus*.

The disease is so varied in its character, as it attacks different persons, and the symptoms are so numerous and frequently so obscure at first, that it is better not to pursue the subject further in this work. The premonitory symptoms, as affecting the head, bowels, etc., can be prescribed for under directions to be found in other divisions of this book. Should symptoms of any gravity threaten, a physician must be called.

YELLOW FEVER.

As sure as the cholera will never pass a boundary line—sulphuretted hydrogen—or spread among people with sulphur in their stockings, so sure can it be said to Yellow Fever: “Thus far, and no farther!” But being a very different disease, it must be done in an entirely different way; sulphur would only promote the evil.

Just as I recommended *Fear, Care and Sulphur* in Asiatic Cholera, so I recommend *Fright, Run and Charcoal* in Yellow Fever.

Fright, because it would make people run away. Every one who can possibly go away ought to do so; the sooner the better; even the sick should be scattered, never crowded.

Yellow Fever has always one or more central points whence it spreads around, and is always communicated by inhalation. The substance carrying the disease is of gaseous nature, and it acts on others not only more or less according to their state of susceptibility, exactly as it is in all infectious diseases, but this infectious gaseous substance must be in a certain state of condensation; it does not act if much diluted, that is mixed with a large body of air.

In this respect the cause and carrier of Yellow Fever, the miasma, as it is called, differs from others; it is only similar to the miasma from swamps, causing intermittent fever, but this latter is confined to certain localities; it cannot be carried about from place to place, it cannot be spread by the sick and dead.

Single cases of Yellow Fever, scattered about particularly in a pure atmosphere, in an air higher, cooler and more in motion, will never spread the disease, and have never done so. Therefore, the sooner and wider apart the sick are scattered, the sooner the whole epidemic will be over. If this scattering abroad is done before the “panic,”

as this disease of the mind is called, spreads, it will not be opposed by ignorant, barbarous neighbors, as has been the case. To scatter the sick is like scattering a fire, which will soon die out if there is no accumulation of combustible matter. To recommend people to go away from the focus is like removing combustible matter from a house on fire, which ought to be done in time and regular order by an organized body. All those who are necessary to oversee and form this organized body should stay, all others go away.

I admire with all my heart the grandeur of mind, shown by the members of the Howard Association who face the terrible enemy, in assisting the sick; the clergymen who stand firmly at their posts to console in that reign of terror; the statesmen who take the helm to prevent disorder and confusion; all of them sacrificing their own comforts, health, and risking their lives. I admire all but one class—the physicians of the old school. Although it was, as a matter of course, their plain duty to stay, it would have been much better for the sick, if they all had run away, following the example of their illustrious preceptor, Galen, who, as soon as an epidemic broke out, mounted his mule, and ran away with his valuable boxes; his slave running after him as fast as only a slave can, who is running away.

What a display of wisdom and deep learning, to give calomel for no other reason than that the patients looked yellow, and because the liver ought to have something to do with it; for calomel acts, according to their most stupid superstition, on the liver!

As if every one, who recovered, would not certainly have done so much sooner and better without it.

One of the most renowned physicians of the South came to Norfolk for the express purpose of advising his brother physicians to give nothing, no medicine whatever. He was truly a wise man, and an honest one.

The next thing to be done is to destroy the miasma at

all points of generation, in each focus. The stagnant swamps along shore, the wharves, canals, etc., are out of the question in times of danger, and ought not to be touched; stirring them up would only increase the poison in the air; what should have been done in the fall and winter cannot be done in summer. But every ship with stinking bilge-water, or which had Yellow Fever or similar diseases on board, ought to be disinfected. It was one of the greatest absurdities of the old school to suppose that chloride of lime, which destroyed some other, entirely different miasmas, would destroy that of Yellow Fever.

It is nothing but a remnant of the old superstitious times, when doctors were hunting for one antidote to all poisons, and when they tried to find one remedy for all diseases. Every substance which is intended to destroy another, must have a chemical affinity for it. A few experiments would have convinced any one that chlorine mixes with the miasma without changing it in the least. It is the same with all other "fumigations," even the most ridiculous, fires in the streets!

But fire produces a substance which, as chemistry has known for nearly one hundred years, has the most peculiar property of absorbing gases,—it is the *common charcoal*. Experiments will prove to any one, what astonishing quantities of gases will be readily absorbed by a mere handful of charcoal—the more if it is crushed or coarsely powdered, as this gives it a larger surface. And, what is to be particularly remarked, gases of that class to which the miasma of Yellow Fever no doubt belongs, are by preference, as it were, and in larger quantities, absorbed by charcoal. A few bucketfuls of it will disinfect a whole ship, if thrown down in the bilge-water, repeated, if necessary, until there is no longer any bad smell.

This has never been done, and why not? The little black particles of charcoal are rather difficult to get out

again! That's all. The same objection to it will be found in hospitals and private sick-rooms.

My first proposition, since 1853,* when I first had the chance of observing cases of Yellow Fever for myself, was to send shiploads of charcoal to all infected places, to disinfect all suspicious vessels with it thoroughly, to have it in every sick-room, to put it by handfulls on all and everything which passes from a Yellow Fever patient, what he vomits, his urine, his stools, at once before they are carried away; his sheets and bed-clothes before they are washed. This should be done in all and every case, and the washerwomen would then not die of the disease, as they have done, even in Philadelphia, in 1853. But it would, of course, require a great deal more water and work to remove all the little black spots from the linen.

Above any other, it should be the most peremptory rule to cover all corpses, without exception, with charcoal, and to fill up the coffins with it, as the corpses produce the poisonous gas, and spread the disease more than anything else. By comparing the maps of the towns, and the local history of the epidemics, I found that the course of the fever was not so much in the direction of the prevailing winds, sometimes even against them, but always towards the burying-grounds, and principally along the streets through which the dead were carried,—the fever followed the dead.

As this use of charcoal should be ordered and enforced by the authorities—for the general application only can produce a perceptible result—let the following experiment be made in a public place, which will convince every one of the great usefulness of charcoal:

Put a dead rat in a small wooden box, upon a layer of charcoal about three inches thick, fill the box so that there are about six inches of charcoal over the rat. Every

* Printed in "The Homœopathic News," No. 7, October, 1855.

one knows what a terrible stench will come in due time from a dead rat. Place this box upon the main table of the council room, and let every one of the rulers of the town take a smell at it every day. If they should perceive more than the common cellar air, they have only to change the upper layer of charcoal, and all the smell will have gone in a few minutes. The rat may rot in a parlor without anybody perceiving it. In a few weeks nothing but skin, hair, sinews and bones will be left.

If a grave were filled with charcoal, at least three to four feet deep, it might be opened afterwards without any danger. A corpse, in a hermetically closed coffin, surrounded with charcoal two feet thick, might be transported without danger to any place.

But "let the dead bury the dead;" the most important result of such a rule, strictly carried out, would be the cessation of the fever in a very short time. All this, however, is independent of the treatment of the sick; but if, in addition to it, all cases were treated homœopathically, the good results would in a single week be perceived by all. It happens, not accidentally of course, but according to a law of nature, that what is the true chemical antidote, is also the best preventive and remedy, if taken internally, or the chemical is analogous to the dynamical. It happens, that among the symptoms of *Carbo vegetabilis*, as collected by Hahnemann, we find a true and most striking similarity of the same group of symptoms which characterize Yellow Fever. It must be left to the scientific portion of physicians to examine this thesis, it is not for everybody.

The best preventive is *Carbo vegetabilis* in homœopathic preparations. The degree of attenuation, and the repetition, do not seem to be matters of much importance; though time and careful observations will ultimately show. But if given at the very first, it may be sufficient. One dose of the highest dilution has been sufficient in

several cases. A patient who had already, on the first day, bleeding of the gums, got well by taking the third trituration every six to eight hours, for a few days.

During the state of the greatest alarm, fatigue and exhaustion, many homœopathic physicians have given *Aconitum* and *Belladonna*, even in alternation; I cannot find a sufficient similarity neither with the one nor the other. Still the reports are a great deal more favorable than those of the allopathists would be, because the latter always kill more than they cure.

If the homœopathic physicians were governed, from the very commencement of the epidemic, by the law of similarity, and would find, according to Hahnemann's rule in the *Organon*, § 100—102, the medicines most corresponding to the character of the epidemic, which may change and will differ in different places, at different seasons, and years, the results ought to be far more favorable and striking than they have been hitherto.

Every one who cannot observe Hahnemann's rule, should commence with *Carbo vegetabilis*, which will act as a basis, after which all other medicines have a better effect. If alarming symptoms appear sometimes after it, another medicine may be given.

Aconitum, for a dry skin, hot fever, with great agony and restlessness.

Belladonna, rush of blood to the head or chest, when moving increases the symptoms.

Lachesis (or, according to several reports, *Crotalus*) in the low, sinking state.

Arnica, if the patient lies in a kind of stupor, with bad smell from the mouth; if he answers, when asked how he is, that he feels well.

Arsenicum, for great agony and burning pains; if not sufficient, *Cantharides* in water.

FAINTING. SWOONING.

When fainting occurs, it generally produces such alarm in those present, that all kinds of experiments, useless, disagreeable, and even injurious, are resorted to. If too large doses of spirits of hartshorn are administered, the consequences may be serious. Remember, the first thing to be avoided in all such cases is hurry. Loosen the clothing, if tight, about the neck, chest and abdomen; place the patient flat on the floor, and remove all objects which, when consciousness returns, might make a disagreeable impression. Sprinkle some cold water from a feather gently upon the face, apply a little water to the neck, the back part of the head, and to the pit of the stomach. If this does not produce any effect, and if the patient becomes cold, let him smell spirits of camphor.

When the cause is known, the remedy may be selected accordingly; for instance, if it arise from fright, *Coffea*, *Opium* or *Aconitum*; from loss of blood, or other debilitating causes, wine, but only a few drops should be given, and afterwards *Cinchona*; when produced by sudden mental emotions, *Ignatia* or *Chamomilla*; after loss of sleep, *Cocculus*. When slight pains cause fainting, give *Hepar*; when violent pain is present, *Aconitum*, *Coffea* or *Chamomilla*; when the pain preceding the fainting had almost driven the patient to distraction, give *Veratrum*; the same remedy will answer when debility and fainting are produced by the least exercise; when it occurs in the morning, *Nux vomica* is frequently of service, particularly in those who use ardent spirits immoderately, or those who have injured themselves by severe mental application. *Nux moschata*, if it occurs after exertion or taking cold in damp weather, in persons who used to complain of great weakness from the slightest exertion, particularly if, while fainting, they have palpitation of the heart, and are afterwards very sleepy. *Carbo vegetabilis*, in cases where too much mercury has been taken; when it comes on after dinner, *Nux vomica* generally removes it, or should this fail, *Phosphoric acid*. If it is preceded by giddiness, give *Chamomilla* or *Hepar*, according to the symptoms. If preceded by nausea, *Ipecacuanha*.

When vomiting occurs after recovery from fainting, do not interfere with it at all; when the patient falls asleep after it, do not disturb him; rest will refresh him.

APPARENT DEATH.

In regard to instances of apparent death, the same error is usually committed as in cases of fainting. Either too much is done, or too many things are tried at once, or nothing is done. There may be apparent death after a violent external injury, when life is only suspended. But appearance may perhaps become reality, by being taken for it too soon. There are many cases of sudden death; but apparent death sometimes occurs, particularly in cases of females who are pregnant, or in childbed. We know of but one sure sign of death, that is, when internal dissolution has proceeded so far as to become perceptible externally. Whenever there is the least uncertainty, and in all sudden cases, and when putrefaction does not commence as suddenly, nothing at least ought to be done that may cause actual death, and the interment should be postponed until the third day; on the third day changes usually appear in the body, which are decisive; all further proceedings should, however, be arrested until they make their appearance, though a week should elapse. In all cases of apparent death, particularly from external violence, the bodies should be treated with the greatest care; if they are treated as the dead generally are, viz.: laid out on a board in a cold room, perhaps covered with ice, they will certainly be dead very soon, if they were not so before.

APPARENT DEATH FROM HUNGER.

Cases of persons, who from want of food have been so much weakened that they faint or are apparently dead, are by no means so very rare. They may and do happen

on all our coasts after shipwrecks; in the mountains, when people lose their way, or in snow-storms, etc. All such persons must of course have food, as the first thing, but the longer they have been without it, the less of it they should have at once. Eating too much and too fast may kill them. In the worst cases, give repeated injections of warm milk; when they show signs of returning life, give the milk to drink, at first a few drops, afterwards more and more; if they want more, give a few spoonfuls of good toastwater, broth, and a little wine. When a sound sleep succeeds, cover them up warm, and not until after that sleep, give them more solid food in small quantities. The following excellent broth for such and similar patients, is highly to be recommended. Take one pound of good beef, free it from fat and bones, cut it up in small pieces, pour over it one pint of cold water, let it stand several hours, stirring it occasionally, then let it simmer over a slow fire, strain it through a hair sieve or coarse cloth, adding enough water to make it a pint, and season it with a little salt. Of this broth give at first a teaspoonful at a time, and afterwards more.

APPARENT DEATH FROM A FALL.

Place the sufferer carefully on a bed, with his head elevated, and in a place where he may remain quiet, put a few globules of *Arnica* on his tongue, and wait quietly until a physician comes to see if there are any fractures, and whether there are still signs of life. When the patient has lost much blood from wounds, or from injudicious bleeding, give *Cinchona*, and a little wine, a few drops at a time, and afterwards *Arnica*.

APPARENT DEATH FROM SUFFOCATION, HANGING, PRESSURE, CHOKING.

Use the method recommended under the title "Apparent death from drowning."

If these procedures are unsuccessful, the following method may be tried: a person in perfect health should pass his open hand from the head of the patient to his feet, keeping his hand at a distance of about an inch or two from the body of the patient; when arrived at the feet the hand should be returned quickly to the head of the patient, keeping it at a great distance from his body in doing so, and this should be continued in the same order for some time. Do not mind such would-be-wise people, who presume to ridicule such a proceeding, because their wisdom cannot explain how it can act. Ask them what causes cholera, intermittent fever, etc.? They will tell you that it is a "something" in the air, a poison, or miasma, and so forth. Nobody has ever been able to take hold of this "something," bottle it up, or show its existence by the most delicate chemical tests; the only test is the human body. All we know is, that people when exposed to this "something" will sometimes certainly get the cholera, fever and ague, etc., and we know, too, that persons have been restored to life by the above described process; but how this "something" in the air or the passes of the hand act we cannot tell, we must be satisfied with the facts.

APPARENT DEATH FROM DROWNING.

In a case of apparent death from drowning the following directions of Dr. Benjamin Howard are the best extant:

"1. *Instantly* turn the patient downward with a large firm roll of clothing under stomach and chest. Place one of his arms under his forehead, so as to keep his mouth off the ground. Press with all your weight two or three times for four or five seconds each time, upon the patient's back so that the water is pressed out of the lungs and stomach, and drains freely out of the mouth. Then:

"2. *Quickly* turn patient face upward with a roll of clothing under the back, just below the shoulder-blades, and make the head hang back as low as possible. Place patient's hands above his head. Kneel with patient's hips between your knees, fix your elbows firmly against your hips, now—grasping lower part of patient's naked chest—squeeze his two sides together, pressing *gradually* forward with all your weight, for about three seconds, until your mouth is nearly over mouth of patient; then, with a push, *suddenly* jerk yourself back. Rest about three seconds; then begin again, repeating these bellows-blowing movements with perfect regularity so that foul air may be pressed out, and pure air drawn into lungs, about eight or ten times a minute, for, at least, one hour, or until the patient breathes naturally.

"Prevent crowding around patient; plenty of fresh air is important. Be careful not to interrupt the first short natural breaths. If they be long apart, carefully continue between them the bellows-blowing movements as before. After breathing is regular, let patient be rubbed dry, wrapt in warm blankets, take hot spirits and water in occasional doses, and then be left to rest and sleep."

NOTE.—The above directions must be used on the spot, the first instant the patient is taken from the water. A moment's delay and success is hopeless.

APPARENT DEATH FROM BEING FROZEN.

Where animation has been suspended by freezing, it may be restored in some cases even when it has ceased for several days. Great care should be taken in moving persons in this condition, so that no part of the body may be injured. Let them be taken from the open air under cover, but consider that even a very moderate heat may kill them; a cold room or a barn where there is not the least draught, is the best place. Cover them entirely with

snow, face and all, leaving merely the mouth and the nostrils free, in such a manner that every part of the body is covered with several inches of it. Place them in such a position that the melted snow may run off easily, and be replaced by fresh. When there is no snow put them into a cold bath, the temperature of which has been reduced by ice. If ice is attached to the body or to the clothes, remove it.

In this manner thaw the body until every part becomes perfectly pliable, then gradually remove the clothing, if necessary, by cutting it from the body. As the limbs become soft and pliable, commence rubbing them with snow, and continue it until they become red; then place the patient on a dry bed, and rub him with cold flannel cloths, stockings, old pieces of felt, etc.

If signs of returning life do not soon manifest themselves under this treatment, small injections containing camphor—a drop of spirit of camphor to half a tumblerful of water—may be administered every quarter or half hour. If the patient begins to revive during the friction, or after taking the camphor, and gives symptoms of returning animation, administer small injections of lukewarm coffee without milk,—and as soon as he can swallow, give him some coffee—a teaspoonful at a time.

It frequently takes hours to restore life, but we ought not to be sparing of labor. For the violent pains which are felt sometimes after the sufferer has revived, give *Carbo vegetabilis* every five to six hours, and if this proves unavailing, *Arsenicum*. If heat or stinging pains are felt in the head, a few doses of *Aconitum* will be of service. If the patient craves wine or brandy, a small quantity may be given to him.

A person who has recovered from freezing, must avoid the heat of the stove and of the fire for a considerable time, as serious maladies, particularly diseases of the bones, are liable to result therefrom. See "Frostbite."

APPARENT DEATH FROM LIGHTNING.

A person rendered insensible by a stroke of lightning, should be at once placed into a freshly made opening in the ground, in a position half sitting, half lying, with the face toward the sun, and be covered all over with fresh ground. As soon as he moves the eyes, give internally a few globules of *Nux vomica*, by placing them upon the tongue, and repeat the dose in half an hour, if there is no sign of returning consciousness. The same remedy may also be given in injection, by dissolving from fifteen to twenty globules in half a pint of water.

The complaints which frequently follow restoration, may generally be removed by *Sulphur* and *Nux vomica*. For blindness, *Phosphorus*.

If you cannot place the patient in the ground, put him in a current of cool, fresh air, and dash plenty of cold water over his face, neck and chest, and use *Nux vomica* as above.

APPARENT DEATH FROM MENTAL EMOTIONS AND OTHER CAUSES.

Look under the different heads of the causes. A case of apparent death from violent mortification, was restored by *Chamomilla*. After suppressed grief, give *Ignatia*. After fright and violent anger, *Aconitum*. After grief caused by disappointed love, where apparent death followed after a violent pain at the heart, *Lachesis* restored the patient.

In cases of sudden, apparent death after violent mental emotions, you may, besides the remedies stated before, give *Apis* or *Glonoine*, if the face is pale. *Apis* if it commenced like fainting, with such a weakness that the patient had to sit down on the spot, or fell down; sometimes with vomiting; particularly if it occurred after great men-

tal or bodily pain. *Glonoine*, if the patient put his hand suddenly upon his heart or head; afterwards cold sweat.

Opium is better if the face is blue, as stated under "Apparent Death from Suffocation."

APOPLEXY.

For the premonitory symptoms of this complaint, such as great inclination to sleep; general feeling of dulness or heaviness; dimness before the eyes; buzzing in the ears; hardness of hearing; heavy, profound sleep and snoring; frequent yawning and fatigue after the least exertion; acute pains in the head; vertigo or giddiness; fainting; irritability of temper; loss of memory; forgetfulness of words or things; acuteness of vision, or double vision; difficulty of swallowing; numbness, or pricking sensation in the extremities; congestion of blood to the head, with throbbing of the arteries of the neck; red face, and quick, full pulse, etc.: see "Determination of Blood to the Head."

In cases of apoplexy, bleeding is sometimes practiced; the revival of the patient may possibly be hastened by it, but, at the same time, his death may be hastened too. The patient should at once be placed, if possible, in bed, with the head high, the clothing loosened about the neck and chest; plenty of fresh air should be obtained and perfect quiet enjoined.

If the pulse is slow and full, face red or pale, give *Opium*; put a few globules of it upon the tongue of the patient, and use some globules, dissolved in a pint of water, as an injection; if the pulse is very weak, give *Lachesis* in the same way.

In other respects, select a remedy according to the cause, and particularly according to the symptoms which preceded the fit. If it was preceded by nausea or inclination to vomit, or if the patient vomits when he recovers, give *Antimon. tart.*; if not better in half an hour, use a solution

of the same remedy as an injection. Select, according to the symptoms, from the following: *Aconitum*, *Veratrum*, *Pulsatilla*, *Phosphoric acid*, *Nux vomica*, *Arsenicum*, *Antimonium crudum*, *Hyoscyamus*.

The limits of this work will not admit of a more extended notice of the disorder; nor, indeed, is that necessary, as the treatment should in all cases be under the management of a homœopathic physician.

DIPHTHERIA, DIPHTHERITIS.

This disease has been observed and described by medical writers of all nations under different names. Its history has indeed been traced back as far as Homer. In the sixteenth century it was epidemic in Holland, and was described by P. Forrest. Towards the end of that century it raged in Spain, killing a great number by suffocation; whence it was called *garotilla*. Since then it has been observed everywhere, more or less violent; and in this country within a few years.

It consists of a croupous or plastic exudation from the mucous membrane of the throat, mouth and nostrils; commencing with feverishness, chilliness and some difficulty in swallowing. The throat looks inflamed; often of a dark mahogany color; and soon becomes covered (usually after the first or second day) with a dirty-grayish, or yellowish-gray exudation or deposit of various thickness; commencing in spots and patches, generally on the tonsils at first; spreading over the soft palate and fauces into the posterior nares and cavity of the nose, and in some cases into the œsophagus and larynx. When this skinny exudation is loosened and removed by external means, it merely shows an inflamed-looking, sometimes an excoriated or ulcerated surface of the mucous membrane beneath, which is soon covered again by the same membrane. Where it is loosened and thrown off spontaneously,

it does not generally renew itself. In malignant cases this pseudo-membrane dissolves into an ill-looking ichorous mass, under which the mucous membrane appears in decayed shreds or dark colored crusts, emitting a most offensive odor. Mostly there co-exists a swelling of the glands beneath the jaw, the parotid glands and of the lymphatics. The great prostration of all the vital powers, which accompanies it from the first, is quite characteristic of this complaint.

As to its *causes*, all writers agree that it is the effect of some *specific poison*, the nature of which we know just as little as that of cholera, typhus, or yellow fever; and as all persons are not attacked by it, it requires a *predisposition* of the organism to it. We do not know, however, in what this consists. Besides, the atmospheric influences upon its spreading are not clearly understood; it seems, however, that it is rather more prevalent in spring and summer than in winter, and more in damp, rainy weather than in a uniformly dry temperature.

Diphtheria is not usually considered contagious, like the eruptive fevers (scarlatina, measles, small-pox); there is no evidence that it ever was conveyed in the clothing, etc.; but we can easily conceive of an epidemic cause, which may bring about more or less contamination of the atmosphere, thus rendering susceptible persons liable to contract the disease from breathing the atmosphere; or it may be propagated by an immediate inoculation of a portion of the vitiated secretions to an absorbent surface of another person, provided this person afford a congenial soil in which the specific cause may develop its specific effects. The patient should, for reasons which are plain, be isolated; and the utmost care used with regard to the soiled linen and the emanations from the body, to prevent the spread of the disease.

A rash on the skin, resembling sometimes measles, at other times scarlet fever, often accompanies this disease;

it breaks out sometimes at the beginning, sometimes at a later period; in a great number of cases it does not appear at all; it may last only a few hours, or remain a longer time, or reappear after having been absent for several days.

An attack of diphtheria is not unfrequently followed by partial paralysis of some portion or portions of the body. This paralysis does not usually appear at once after the attack, but a period of several weeks may elapse, and after the patient is apparently quite well the trouble appears. Difficulty in swallowing, due to paralysis of the muscles of swallowing, is the most common form, though the extremities may be affected. The heart often becomes greatly weakened during the progress of the disease and sometimes proves itself inadequate to perform its work if an extra tax is put upon it. So that death may result after even a slight exertion, or paralysis of the heart may occur. The system generally is left in a weakened, anæmic condition after a bad attack of diphtheria, and weeks are frequently consumed ere health is fully restored. Salt air is a great help to those convalescing from this disease.

The mildest attacks in the commencement have resulted unfavorably. Bad signs are:

The acrid discharge from the nostrils. The invasion of the larynx or the development of diphtheritic croup. Hemorrhages from nose and mouth; purpura; petechiæ. Coldness of the external surface of the body. Albuminuria; diarrhœa and vomiting. Convulsions. Complications with scarlet fever.

Certain localities and seasons seem to be the occasion of more dangerous cases than others.

During the progress of the disease and afterward for some days or weeks even, the utmost attention should be paid to the diet and hygiene of the patient. The most nourishing food must be given at short intervals, and if the prostration is considerable, whisky is to be given freely. The patient must lie in bed, and in bad cases retain constantly the recumbent position.

TREATMENT.

Bryonia, the patient is quickly prostrated, shuns all motions, and complains, on moving or when being moved, of pain everywhere; white tongue; feeling of dryness in the mouth without peculiar thirst, or else desire for large quantities of water.

Belladonna, the patient is restless, complains of sore throat; the fauces look highly inflamed; the pupils are enlarged; he feels drowsy, and yet unable to fall asleep; starts suddenly out of sleep.

Lachesis, when, after *Belladonna*, by next evening there is no marked change for the better; or when he is even worse in the morning after some sleep, with a decided development of those skinny patches on the tonsils, worse on the left side; or when croupy symptoms appear, and the patient cannot bear anything touching his neck and throat.

Lycopodium, when the aspect of the fauces is rather of a brownish-redness, worse on right side, and worse from swallowing *warm* drinks; when the nose is stopped up, and the patient cannot breathe with his mouth shut; he keeps his mouth constantly open, slightly projecting his tongue, which gives him a silly expression; the nostrils are widely dilated with every inspiration; on awakening out of a short nap, he is awfully cross, kicks and behaves in a naughty way (if a child), or he jumps up in bed, stares about and knows nobody, seemingly dreaming with open eyes; frequent jerkings of the lower limbs, mostly with a groan, awake or slumbering; great fear of being left alone.

Rhus toxicodendron, when the child is restless, wants to be carried about, wakes up every now and then complaining of pain in the throat; bloody saliva runs out of the mouth during sleep; the parotid glands are a good deal swollen; there are transparent, jelly-like discharges from the bowels as stool, or afterwards.

Apis, great debility from the beginning; the membrane assumes at once a dirty-grayish color, or there is great œdema of the soft palate and uvula; puffiness around the eyes; pain in the ears, when swallowing; an itchy, stinging eruption on the skin; a sensation of weakness in the larynx; numbness of the feet and hands and even paralysis. (Never does good either before or after *Rhus tox.*)

Antimon. tart., difficult breathing, gasping for air; rattling in the chest; retching, vomiting of tenacious mucus; small circular patches, like small-pox pustules, in and upon the mouth and tongue; œdema of the lungs.

Ignatia. In many cases this remedy is alone required. There is more or less membrane in the throat, usually in greater abundance on the right side. Much prostration.

Mercurius. Tongue coated thickly white or yellowish. Much salivation; glands swollen. Much membrane on tonsils.

NEW CATALOGUE

HOMŒOPATHIC PUBLICATIONS.

F. E. BOERICKE,
HAHNEMANN PUBLISHING HOUSE,
PHILADELPHIA.

ALLEN, DR. TIMOTHY F. *The Encyclopedia of Pure Materia Medica; a Record of the Positive Effects of Drugs upon the Healthy Human Organism.* With contributions from Dr. Richard Hughes, of England; Dr. C. Hering, of Philadelphia; Dr. Carroll Dunham, of New York; Dr. Adolph Lippe, of Philadelphia, and others. Ten volumes. Price bound in cloth, \$60.00; in half morocco or sheep, \$70.00

This is the most complete and extensive work on *Materia Medica* ever attempted in the history of medicine—a work to which the homœopathic practitioner may turn with the certainty of finding the whole pathogenetic record of any remedy ever used in homœopathy, the record of which being published either in book form or in journals.

"With the Volumes IX. and X. now before us—ALLEN'S ENCYCLOPEDIA OF PURE MATERIA MEDICA—is completed. It comprises all remedies proved or applied by Homœopaths. With truly wonderful diligence everything has been carefully collated from the whole medical literature that could be put under contribution to Homœopathy, thus enabling anyone who wants to make a thorough study of *Materia Medica*, or who wants to read up a special remedy to find what he needs and where to look for it. . . . As regards printing, paper, and general get-up, the house of Boericke & Tafel has fully upheld its old established reputation."—*From the Allgemeine Homœopathische Zeitung.*

ALLEN, DR. TIMOTHY F. *A General Symptom Register of the Homœopathic Materia Medica.*—1,331 pages. Large 8vo.
Cloth, \$12.00
Half morocco or sheep, \$14.00

This valuable work was eagerly welcomed by the homœopathic profession, and a large portion of the edition has already been disposed of. The work can be obtained through every homœopathic pharmacy, and those desiring to secure a copy should send in their orders without delay, as but a limited number of copies remain available.

"The long hoped for 'Index' has come, and now lies before us in all the glory of a comely volume of 1,331 pages, beautifully printed on good, clear paper, and bound in cloth.

"Every scientific practitioner in the world will heartily thank the indefatigable author for crowning his pharmaco-encyclopedic edifice so promptly with a workable repertorial index. The thing we are most thankful for is that *the arrangement is strictly alphabetical*. FIRST, THE PART AFFECTED; SECOND, THE SENSATION, *conditioned or modified*. No fads or fancies, theories or hypotheses. Of course everybody has a copy of the 'Encyclopedia,' and now everybody will get a copy of the Index. We cannot pretend to review such a work. It bears every mark of care, capability and conscientiousness, and to hunt about for specks of dirt on such a grand picture is not the kind of work for us. The only piece of advice we offer to intending purchasers is that they ask for it bound in leather, for common cloth binding, no matter how nice to the eye, soon begins to tear at the back, and becomes the source of endless annoyance. This applies, of course, to a work for frequent reference, and Allen's 'Index' is practically a dictionary to his 'Encyclopedia,' and as such will be used many times a day."—*From the Homœopathic World.*

ALLEN AND NORTON. Ophthalmic Therapeutics. See Norton's Ophthalmic Therapeutics.

ALLEN, WILLIAM A. Repertory of the Symptoms of Intermittent Fever. Arranged by WILLIAM A. ALLEN. 107 pages. 12mo. Cloth. Price, \$1.00

We give a letter of Timothy F. Allen, M.D., recommending the publication of this little work:

"I have carefully examined the repertory of Dr. Wm. Allen, of Flushing, and assure you that it is exceedingly valuable. It should be printed in pocket form. I should use it constantly. Dr. Allen has a large experience in the treatment of intermittents, and his own observations are entitled to great respect."

ALLEN, H. C. The Therapeutics of Intermittent Fever. By H. C. ALLEN, M.D., of the University of Michigan. Second edition, revised and enlarged. 342 pages. 8vo. Cloth, \$2.75

This is the Second Edition of the author's work, which originally appeared in 1879, and found a rapid sale and met with a hearty reception from the profession. It has been very carefully revised, and to meet an evident demand to the bracketed comparison of the former edition, have been added some leading characteristics of each remedy, and a complete repertory. In advance of the coming malarial season, the homœopathic practitioner can furnish himself with no better or more indispensable guide than this excellent monograph, as the following notices abundantly testify:

"And now, is it too much to say that with its full *Materia Medica*, its comparisons, clinical illustrations, and repertory, all in good type, it is the best work on the subject that has ever been issued."—A. F. Randall, M.D., in *Investigator*.

"This work is a necessity where one has to cope with that, often most discouraging of all diseases, and its careful study may assure success. You are not complete without it."—*The Regular Physician*.

"Prof. Allen deserves the thanks of the profession for this volume. As a true Homœopath, he has grappled with the task of showing that intermittent fever can *always* be cured, provided it is treated rigidly homœopathically and with purely homœopathic remedies. We cannot help admiring how thoroughly he has combined provings with clinical demonstrations. No physician who has had a glimpse of the book will do without it. We would be derelict in the duty to our readers if we did not urge them to buy it."—*American Homœopath*.

"It is easier to resort to *Quinine*, just as the regulars do, than to understand the pathogenesis of our remedies and apply them effectively. But *nihil desperandum*—read this book; it will make crooked paths straight and rough places smooth. Never say it cannot be done until you try it in the way here pointed out."—*Cincinnati Medical Advance*.

ARNDT, H. C. A System of Medicine, Based upon the Homœopathic Law of Cure. In 3 vols. Price, per volume, bound in cloth, \$7.50; half morocco or sheep, \$8.50

This great work has been, without exception, received with unqualified praise both in Europe and America, and has been unhesitatingly pronounced the most exhaustive work of its kind in homœopathic literature. The result of so much labor, the combined effort of so many of the best minds in our school, we are glad to say, has not been lost upon the profession: it is now clearly demonstrated that "*A System of Medicine, Based upon the Law of Homœopathy*," will long remain a standard work in the homœopathic school of medicine. The large demand for the work is especially flattering, showing how many physicians realize that books that are universally applauded are books to be bought and studied—else they will fall behind the progress of the age.

"The complete work is one that every physician ought to possess, and one that he will make no mistake in securing."—*The Medical Era*.

"We recommend all of our readers to subscribe at once for this standard work on practice. It fills a deeply-felt want, and should receive the warm welcome of the profession."—*American Observer*.

"The work consists of a number of essays by some of the ablest members of our school on the subjects assigned to them, under the editorial supervision of Dr. Arndt, who has done his work well. Like all of Boericke's publications, the book is in the highest style of the printer's art."—*The Medical Advance*.

"The work, if Vol. I is a sample, is creditable to the numerous contributors, to its editor, and to the publisher. The text is clearly rendered, is concise, and, so far as our reading shows, up to date in symptomatology, diagnosis and pathology.

"In regard to paper, printing and binding, we desire to thank our industrious and pains-taking publisher, for offering such a perfect book. Printed with virgin type, on excellent paper, the book vies with, if it does not excel, any previous effort of any publishing house."—*Hahnemannian Monthly*.

"*The System of Medicine*, Vol. I, came to hand just in time to save the life of one of my patients—hence I am much pleased with it. Enclosed please find the amount due."—*Private Letter*.

"Whatever opinions one may have upon the contested points of homœopathic practice, whether he be a loose prescriber or a strict Hahnemannian, he cannot fail to be proud of the handsome volume which Dr. Arndt here presents to his fellow-practitioners.

"It is a volume which, in extent and completeness, exceeds and excels anything of its kind yet published. Its descriptions of diseases are clear and full—amply full, although not so large as works like Ziemssen's and Pepper's *System of Practical Medicine*, which are spun out to a tedious length.

* * * * *

"The best portion of the volume, to our mind, is the chapter on diseases of the organs of digestion. This is worth the price of the volume."—*The Homœopathic Physician*.

"I am more than pleased with the volume. The long-felt want for such a work would make me appreciate it even were it ordinary work, but the clear bold type, the neat and solid binding, and the completeness of each subject treated of, makes it the most welcome book that ever came into my office. I read it like a novel for half the night."—*Private Letter*.

"Allow me to congratulate you on the completion of what fills a long-felt want. I have scanned its beautiful clean pages with a great deal of pleasure, and, I must confess, with a good deal of pride. Now there is no longer any excuse for the purchase of Old School works on Practice, as this work meets every necessity. . . . Should the remaining volumes be up to the standard of the first, Homœopathy must ever be indebted to Arndt and his co-laborers for the best work on Homœopathic Practice ever yet published."—*Private Letter*.

"This great work will be to the homœopathic school what Reynold's *System of Medicine* and Ziemssen's *Encyclopedia of Medicine* is to the allopathic. The homœopathic system of practice has never been represented, in this country at least, by a text-book on general practice which met the wants of that school. They have been deficient in the etiology, pathology, and diagnosis of disease. But this work is very complete in these respects, and is fully un

to the requirements of the condition of medical science of to-day. Every disease treated of in this volume is written up in the most exhaustive manner. The therapeutics of each disease is concise, plain, and not encumbered with that amount of symptomatology which has been a great fault of homœopathic works on practice. The characteristic or guiding symptoms are alone given, greatly increasing the value of the work.

* * * * *

The typography and binding are excellent, and the text is very free from errors. It will be a work of which the new school will be proud, and it will show a rapid advance in that method of practice, an advance in accord with the general advance in therapeutics, in liberal scientific methods, and a gradual breaking away from some of the visionary and early dogmas of the followers of Hahnemann. But the fundamental truth of homœopathic law of similia is ably defended."—*Chicago Inter-Ocean*.

Contents of volumes as follows:

VOL. I.—General Introduction—Chapter on Physical Diagnosis—Diseases of the Respiratory Organs—Diseases of the Organs of Circulation—Diseases of the Organs of Digestion.

VOL. II.—Diseases of Blood-Glandular System—Diseases of Urinary Organs—Diseases of the Genital and Reproductive Organs—Diseases of the Nervous System—Diseases of the Organs of Locomotion.

VOL. III.—Diseases of the Skin of the Eye and Ear—Constitutional Diseases.

BAEHR, DR. B. *The Science of Therapeutics according to the Principles of Homœopathy.* Translated and enriched with numerous additions from Kafka and other sources, by C. J. HEMPEL, M.D. Two volumes. 1387 pages. Half morocco, \$9.00

"The descriptions of disease—no easy thing to write—are always clear and full, sometimes felicitous. The style is easy and readable, and not too prolix. Above all, the relations of maladies to medicines are studied no less philosophically than experimentally, with an avoidance of abstract theorizing on one side, and of mere empiricism on the other, which is most satisfactory."—*From the British Journal of Homœopathy*.

BELL and LAIRD, DRS. *The Homœopathic Therapeutics of Diarrhœa, Dysentery, Cholera, Cholera Morbus, Cholera Infantum, and all other Loose Evacuations of the Bowels;* by JAMES B. BELL, M.D. Second edition. 275 pages. 12mo. Cloth, \$1.50

"This little book, issued in 1869, by Dr. Bell, has long been a standard work in Homœopathic Therapeutics. We feel quite within bounds in asserting that it has been the means under our law, of saving thousands of lives. Than this no greater commendation could be penned. . . . In this second edition, Dr. Bell has been assisted by Dr. Laird, of Maine; also by Drs. Lippe, William P. Wesselhoeft and E. A. Farrington. Thirty-eight new remedies are given; the old text largely rewritten; many rubrics added to the repertory; a new feature, the 'black type,' for especially characteristic symptoms, introduced.

"This is a typical homœopathic work, which no homœopathic physician can afford to be without. The typographical setting is worthy of the book."—*From the Homœopathic Physician*.

BERJEAU, J. PH. *The Homœopathic Treatment of Syphilis, Gonorrhœa, Spermatorrhœa, and Urinary Diseases.* Revised, with numerous additions, by J. H. P. FROST, M.D. 256 pages. 12mo. Cloth, \$1.50

This valuable little book, compiled from the results of the experience of the best Homœopathic authorities, by Dr. Berjeau, of London, in 1856, has since been revised and enlarged by J. H. P. Frost, M.D., and is now perhaps the best and most concise presentation of the subject to be had.

BREYFOGLE, DR. W. L. *Epitome of Homœopathic Medicines.* 383 pages. \$1.25

We quote from the author's preface:

"It has been my aim, throughout, to arrange in as concise form as possible, the leading symptoms of all well-established provings. To accomplish this, I have compared Lippe's *Mat. Med.*; the *Symptomen-Codex*; *Jahr's Epitome*; *Benninghausen's Therapeutic Pocket-Book*, and *Hale's New Remedies*.

BRIGHAM, DR. GERSHAM N. *Phthisis Pulmonalis, or Tubercular Consumption.* Pp. 224. 8vo. Cloth. Price, . . . \$2.00

This interesting work on a subject which has been the "*Opprobrium Medicorum*" for generations past, has met with a favorable reception at the hands of the profession. It is a scholarly work and treats its subject from the standpoint of pure homœopathy.

"Just now a fresh move of interest in consumption is passing over the world, and hence we may say Dr. Brigham's monograph comes apropos; but on the other hand it comes too early, as the parasitic nature of phthisis is now the great phthisiological question which belittles and dwarfs every other.

"Our author's work must be pronounced as decidedly able, and its principal defects are those of the subject itself in its present state of development. In our opinion the whole question is still involved in too much doubt and difficulty to admit of its being handled very lucidly at present. Dr. Brigham tries very hard to clear the deck of all notions that might be in the way of handling the subject scientifically, but he does not quite succeed even in defining clearly one single form of phthisis. Why? because in the present state of the subject it is impossible for any man to do so, and we question whether a much better book on phthisis is possible at present."—*From The Homœopathic World*, for October, 1882.

BRYANT, DR. J. *A Pocket Manual, or Repertory of Homœopathic Medicine*, Alphabetically and Nosologically arranged, which may be used as the Physicians' *Vade-mecum*, the Travellers' Medical Companion, or the Family Physician. Containing the Principal Remedies for the most important Diseases; Symptoms, Sensations, Characteristics of Diseases, etc.; with the principal Pathogenetic Effects of the Medicines on the most important Organs and Functions of the Body, together with Diagnosis, Explanation of Technical Terms, Directions for the Selection and Exhibition of Remedies, Rules of Diet, etc. Compiled from the best Homœopathic authorities. Third edition. 352 pages. 18mo. Cloth, \$1.50

DR. BURNETT'S ESSAYS. *Ecce Medicus; Natrum Muriaticum; Gold; The Causes of Cataract; Curability of Cataract; Diseases of the Veins; Supersalinity of the Blood.* Pp. 296. 8vo. Cloth. Price, \$2.50

Dr. Burnett's essays were so favorably received in this country, that they would undoubtedly have commanded a very large sale, had they not been so high in price. As it was the six essays would have cost over five dollars, and in order to bring them within reach of the many we reprinted them, by special arrangement with the author, who contributed a new essay, "*The Causes of Cataract*," not hitherto published, and a general introduction to the volume.

The book is printed in good style on heavy toned paper and well bound, and we are able to furnish it at less than half the price of the imported volumes.

We feel sure that these suggestive and sprightly monographs will be highly appreciated by the profession at large.

BUTLER, DR. JOHN. *A Text-Book of Electro-Therapeutics and Electro-Surgery; FOR THE USE OF STUDENTS AND GENERAL PRACTITIONERS.* By JOHN BUTLER, M.D., L.R.C.P.E., L.R.C.S.I., etc., etc. Second edition, revised and enlarged. 350 pages. 8vo. Cloth, \$3.00

"Among the many works extant on Medical Electricity, we have seen nothing that comes so near 'filling the bill' as this. The book is sufficiently comprehensive for the student or the practitioner. The fact that it is written by an enthusiastic and very intelligent homeopathist, gives to it additional value. It places electricity on the same basis as other drugs, and points out by specific symptoms when the agent is indicated. The use of electricity is therefore clearly no longer an exception to the law of *similia*, but acts curatively only when used in accordance with that law. We are not left to conjecture and doubt, but can clearly see the specific indications of the agent, in the disease we have under observation. The author has done the profession an invaluable service in thus making plain the pathogenesis of this wonderful agent. The reader will find no difficulty in following both the pathology and treatment of the cases described. Electricity is not held up as the cure-all of disease, but is shown to be one of the most important and valuable of remedial agents, when used in an intelligent manner. We have seen no work which we can so heartily recommend as this."—*Cincinnati Medical Advance*.

BUTLER, DR. JOHN. Electricity in Surgery. Pp. 111. 12mo. Cloth. Price, \$1 00

This interesting little volume treats on the application of Electricity to Surgery. The following are some of the subjects treated of: ENLARGEMENT OF THE PROSTATE; STRICTURE; OVARIAN CYSTS; ANEURISM; NÆVUS; TUMORS; ULCERS; HIP DISEASE; SPRAINS; BURNS; GALVANO-CAUTERY; HÆMORRHOIDS; FISTULÆ; PROLAPSUS OF RECTUM; HERNIA, ETC., ETC. The directions given under each operation are most explicit and will be heartily welcomed by the practitioner.

DUNHAM, CARROLL, A.M., M.D. Homœopathy the Science of Therapeutics. A collection of papers elucidating and illustrating the principles of homœopathy. 529 pages. 8vo. Cloth, . . . \$3.00
Half morocco, \$4.00

"More than one-half of this volume is devoted to a careful analysis of various drug-provings. It teaches us *Materia Medica* after a new fashion, so that a fool can understand, not only the full measure of usefulness, but also the limitations which surround the drug. . . . We ought to give an illustration of his method of analysis, but space forbids. We not only urge the thoughtful and studious to obtain the book, which they will esteem as second only to the *Organon* in its philosophy and learning."—*The American Homœopathist*.

DUNHAM, CARROLL, A.M., M.D. Lectures on *Materia Medica*. 858 pages. 8vo. Cloth, \$5.00
Half morocco, \$6.00

"Vol. I. is adorned with a most perfect likeness of Dr. Dunham, upon which stranger and friend will gaze with pleasure. To one skilled in the science of physiognomy there will be seen the unmistakable impress of the great soul that looked so long and steadfastly out of its fair windows. But our readers will be chiefly concerned with the contents of these two books. They are even better than their embellishments. They are chiefly such lectures on *Materia Medica* as Dr. Dunham alone knew how to write. They are preceded quite naturally by introductory lectures, which he was accustomed to deliver to his classes on general therapeutics, on rules which should guide us in studying drugs, and on the therapeutic law. At the close of Vol. II. we have several papers of great interest, but the most important fact of all is that we have over fifty of our leading remedies presented in a method which belonged peculiarly to the author, as one of the most successful teachers our school has yet produced. . . . Blessed will be the library they adorn, and the wise man or woman into whose mind their light shall shine."—*Cincinnati Medical Advance*.

EDMONDS on Diseases Peculiar to Infants and Children. By W. A. EDMONDS, M.D., Professor of Pædology in the St. Louis Homœopathic College of Physicians and Surgeons, etc., etc., etc. 1881. Pp. 300. 8vo. Cloth, \$2.50

This work meets with rapid sales, and was accorded a flattering reception by the homœopathic press.

"This is a good, sound book, by an evidently competent man. The preface is as manly as it is unusual, and engages one to go on and read the entire work. In the chapters on the

examination of sick children we read that 'no physician will ever have full and comfortable success as a pædologist who has a brusque, reticent, undemonstrative manner. It is indispensable that a physician having children in charge should convince them by his manner that he likes them, and sympathizes with them in their whims, foibles and peculiarities. Their intuitions as to whom they ought to like and ought not to like are marked and wonderfully accurate at a very tender age.' The physician who writes thus is a born pædologist, and most assuredly a very successful practitioner. . . .

"After the examination of children has been dwelt upon, our author proceeds to discuss of the hygiene of children in a very able and sensible manner. He then discourses upon the various diseases of children in an easy and yet didactic manner, and any one can soon discover that he knows whereof he writes."—*From the Homœopathic World.*

EGGERT, DR. W. *The Homœopathic Therapeutics of Uterine and Vaginal Discharges.* 543 pages. 8vo. Half morocco, \$3.50

The author here brought together in an admirable and comprehensive arrangement everything published to date on the subject in the whole homœopathic literature, besides embodying his own abundant personal experience. The contents, divided into eight parts, are arranged as follows:—PART I. *Treats of Menstruation and Dysmenorrhœa.* PART II. *Menorrhagia.* PART III. *Amenorrhœa.* PART IV. *Abortion and Miscarriage.* PART V. *Metrorrhagia.* PART VI. *Fluor albus.* PART VII. *Lochia,* and PART VIII. *General Concomitants.* No work as complete as this, on the subject, was ever before attempted, and we feel assured that it will meet with great favor by the profession.

GUERNSEY, DR. H. N. *The Application of the Principles and Practice of Homœopathy to Obstetrics and the Disorders Peculiar to Women and Young Children.* By HENRY N. GUERNSEY, M.D., Professor of Obstetrics and Diseases of Women and Children in the Homœopathic Medical College of Pennsylvania, etc., etc. With numerous Illustrations. Third edition, revised, enlarged, and greatly improved. Pp. 1004. 8vo. Half morocco, \$8.00

In 1869 this sterling work was first published, and was at once adopted as a text-book at all homœopathic colleges. In 1873 a second edition, considerably enlarged, was issued; in 1878 a third edition was rendered necessary. The wealth of indications for the remedies used in the treatment, tersely and succinctly expressed, giving the gist of the author's immense experience at the bedside, forms a prominent and well appreciated feature of the volume.

"This standard work is a credit to the author and publishers. * * * * * The instructions in the manual and mechanical means employed by the accoucheur are fully up to the latest reliable ideas, while the stand that is taken that all derangements incidental to gestation, parturition and post partum are not purely mechanical, but will in the majority of cases, if not all, succumb to the action of the properly selected homœopathic remedy, shows that Prof. Guernsey has not fallen into the rut of methodical ideas and treatment. . . . The appendix contains additional suggestions in the treatment of suspended animation of newly-born children, hysteria, ovarian tumors, sterility, etc., suggestions as to diet during sickness of any kind, etc., etc. After the index is a glossary, a useful appendix in itself. Every practitioner should have a copy of this excellent work, even if he has two or three copies of old school text-books on obstetrics and diseases of women."—*From the Cincinnati Medical Advance.*

GUERNSEY, DR. E. *Homœopathic Domestic Practice.* With full Descriptions of the Dose to each single Case. Containing also Chapters on Anatomy, Physiology, Hygiene, and abridged *Materia Medica.* Tenth enlarged, revised, and improved edition. Pp. 653. Half leather, \$2.50

HAGEN, DR. R. *A Guide to the Clinical Examination of Patients and the Diagnosis of*

docent to the University of Leipzig. Translated from the second revised and enlarged edition, by G. E. GRAMM, M.D. Pp. 223. 12mo. Cloth \$1.25

"This is the most perfect guide in the examination of patients that we have ever seen. The author designs it only for the use of students of medicine before attending clinics, but we have looked it carefully through, and do not know of 223 pages of printed matter anywhere of more importance to a physician in his daily bedside examinations. It is simply invaluable."—*From the St. Louis Clinical Review.*

HAHNEMANN, DR. S. Organon of the Art of Healing. By SAMUEL HAHNEMANN, M.D. *Aude Sapere.* Fifth American edition. Translated from the fifth German edition, by C. WESSELHOEFT, M.D. Pp. 244. 8vo. Cloth, \$1.75

"To insure a correct rendition of the text of the author, they (the publishers) selected as his translator Dr. Conrad Wesselhoeft, of Boston, an educated physician in every respect, and from his youth up perfectly familiar with the English and German languages, than whom no better selection could have been made." "That he has made, as he himself declares, 'an entirely new and independent translation of the whole work,' a careful comparison of the various paragraphs, notes, etc., with those contained in previous editions, gives abundant evidence; and while he has, so far as possible, adhered strictly to the letter of Hahnemann's text, he has at the same time given a pleasantly flowing rendition that avoids the harshness of a strictly literal translation."—*Hahnemannian Monthly.*

HAHNEMANN, DR. S. The Lesser Writings of. Collected and Translated by R. E. DUDGEON, M.D. With a Preface and Notes by E. MARCY, M.D. With a Steel Engraving of Hahnemann from the statue of Steinhauser. Pp. 784. Half morocco, \$3.00

This valuable work contains a large number of Essays of great interest to laymen as well as medical men, upon Diet, the Prevention of Diseases, Ventilation of Dwellings, etc. As many of these papers were written before the discovery of the homœopathic theory of cure, the reader will be enabled to peruse in this volume the ideas of a gigantic intellect when directed to subjects of general and practical interest.

HALE, DR. E. M. Lectures on Diseases of the Heart. In three parts. Part I. Functional Disorders of the Heart. Part II. Inflammatory Affections of the Heart. Part III. Organic Diseases of the Heart. Second enlarged edition. Pp. 248. Cloth, \$1.75

"After giving a thorough overhauling to the lectures of Dr. Hale, with the full intention of a close criticism, I acknowledge myself conquered. True there are text books on the same subject of thrice the number of pages—more voluminous, but not so concise; and in this very conciseness lies the merit of the work. Students will find there everything they need at the bedside of their patients. It fills just a want long felt by the profession, and we can only congratulate Dr. Hale to have found in Messrs. Boericke & Tafel, publishers who have done their work equally well."—*North American Journal of Homœopathy.*

HALE, DR. E. M. Materia Medica and Special Therapeutics of the New Remedies. By EDWIN M. HALE, M.D., Professor of Materia Medica and Therapeutics of the New Remedies in Hahnemann Medical College, Chicago, etc., etc. Fifth edition, revised and enlarged. In two volumes—Vol. I. Special Symptomatology. With new Botanical and Pharmacological Notes. Pp. 770. 1882. Cloth, \$5.00
Half morocco, \$6.00

"Dr Hale's work on *New Remedies*, is one both well known and much appreciated on this side of the Atlantic. For many medicines of considerable value we are indebted to his researches. In the present edition, the symptoms produced by the drug investigated, and those which they have been observed to cure, are separated from the clinical observations, by which the former have been confirmed. That this volume contains a very large

amount of invaluable information is incontestable, and that every effort has been made to secure both fulness of detail and accuracy of statement, is apparent throughout. For these reasons we can confidently commend Dr. Hale's fourth edition of his well known work on the *New Remedies* to our homœopathic colleagues."—*From the Monthly Homœopathic Review.*

HALE, DR. E. M. Materia Medica and Special Therapeutics of the New Remedies. By EDWIN M. HALE, M.D. Late Professor of Materia Medica and Therapeutics of the New Remedies in Hahnemann Medical College, Chicago; Professor of Materia Medica in the Chicago Homœopathic College, etc. Fifth edition, revised and enlarged (thirty-seven new remedies), in two volumes. Vol. II. Special Therapeutics. With illustrative cases. Pp. 901. 8vo. Cloth, . . . \$5.00
Half morocco, \$6.00

"Hale's *New Remedies* is one of the few works which every physician, no matter how poor he may be, ought to own. Many other books are very nice to have, and very desirable, but this is indispensable. This volume before us is an elegant specimen of the printers' and binders' art, and equally enjoyable when we consider its contents, which are not only thoroughly scientific, but also as interesting as a novel. Thirty-seven new drugs are added in this edition, besides numerous additions to the effects of drugs, previously discussed. * * * * * We must say and reiterate if necessary, that Dr. Hale has hit the nail on the head in his plan for presenting the new remedies. It does well enough to tabulate and catalogue, for reference in looking up cases, barren lists of symptoms, but for real enjoyable study, for the means of clinching our information and making it stand by us, give us volumes planned and executed like that now under consideration."—*From the New England Medical Gazette.*

HALE, DR. E. M. Medical and Surgical Treatment of the Diseases of Women, especially those causing Sterility. Second edition. Pp. 378. 8vo. Cloth, \$2.50

"This work is the outcome of a quarter of a century of practical gynecological experience, and on every page we are struck with its *realness*. It is one of those books that will be kept on a low shelf in the libraries of its possessors, so that it may be found readily at hand in case of need. It is a work that soon will be well-thumbed by the busy practitioner who owns it, because in many a difficult obstetric case he will pace his study, tug at the favorite button a little nervously, and suddenly pause and exclaim, 'Let us see what Hale says about it!' and in seeing what Hale does say about it he will feel strengthened and comforted, as one does after a consultation with a *hülffreicher* colleague in a difficult or dangerous case, in which the enormous responsibility had threatened to crush one.

"In many obstinate uterine cases we shall reach this book down to read again and again what this clinical genius has to say on the subject. We have never seen Professor Hale in the flesh, but we have had scores of consultations with him in the pages of his *New Remedies*, and he has thus fearlessly helped us cure many an obstinate case of disease.

"When we get a good book we mentally shake hands with the author, and think gratefully of him for giving us of his great riches. This is a good book, and thus we act and feel towards its gifted author, Professor Hale."—*From the Homœopathic World, London.*

HART, DR. C. P. Diseases of the Nervous System. Being a Treatise on Spasmodic, Paralytic, Neuralgic and Mental Affections. For the use of Students and Practitioners of Medicine. By CHAS. PORTER HART, M.D., Honorary Member of the College of Physicians and Surgeons of Michigan, etc., etc., etc. Pp. 409. 8vo. Cloth, . . . \$3.00

"This work supplies a need keenly felt in our school—a work which will be useful alike to the general practitioner and specialist; containing, as it does, not only a condensed compilation of the views of the best authorities on the subject treated, but also the author's own clinical experience; to which is appended the appropriate homœopathic treatment of each disease. It is written in an easy, flowing style, at the same time there is no waste of words. * * * * * We consider the work a highly valuable one, bearing the evidence of hard work, considerable research and experience."—*Medico-Chirurgical Quarterly.*

"We feel proud that in Hart's 'Diseases of the Nervous System' we have a work up

to date, a work which we need not feel ashamed to put in the hands of the neurologist or alienists for critical examination, a work for which we predict a rapid sale."—*North American Journal of Homœopathy*.

HART, DR. C. P. A Treatise on Intracranial Diseases. By CHAS.

PORTER HART, M.D., Honorary Member of the College of Physicians and Surgeons of Michigan, etc. 312, pages. 8vo. Cloth. . . . \$2.00

The Author's *Nervous System*, with above as Supplement, bound in one.

Price, \$4.00

"Well bound, beautifully printed, up to the times in pathology, replete with homœopathic therapeutics, supplemental and complotory of the author's work on Nervous Diseases—these are its qualifications."—*Hahnemannian Monthly*, April, 1884.

It is written in Dr. Hart's elaborate manner, clear and unambiguous, and will prove a valuable guide to the proper understanding and treatment of inflammatory, organic and symptomatic affections of the brain and its membranes."—*American Observer*.

"We are glad to observe how closely our author adheres to the rigid (and hence successful) homœopathic method of prescribing. Even in *insomnia*, where the temptation to use chloral, etc., is so pressing, we have given us the truth—to the exclusion of empirical nonsense."—*Homœopathic Physician*, April, 1884.

"The author gives within moderate compass, and in a very readable manner, the present views on cerebral pathology, prefacing this with a section on the physiological functions of the cerebrum, cerebral ganglia and medulla. The section on disease embraces not only the better known, but rare and obscure conditions, and these are so lucidly described as to have almost the value of a clinical lecture. The therapeutic part is full, discriminating, and as far as our experience will permit us to judge, accurate. The index deserves an especial note of commendation."—*American Homœopathy*, for March, 1884.

HELMUTH, DR. W. T. A System of Surgery. Illustrated with

568 Engravings on Wood. By WM. TOD HELMUTH, M.D. Third edition. Pp. 1000. Sheep, \$8.50

This standard work, for many years used as a text-book in all homœopathic colleges, still maintains its rank as the best work ever brought out by our school on the subject. Ever since it was issued the necessity, for the student or practitioner, to invest in allopathic works on the subject ceased to exist. It is up to date, and abounds in valuable hints, for it gives the results of the author's ripe and extensive experience with homœopathic medication in connection with surgical operations. In elegance of diction our author has never been approached.

"We have in this work a condensed compendium of almost all that is known in practical surgery, written in a terse, forcible, though pleasing style, the author evidently having the rare gift of saying a great deal in a few words, and of saying these few words in a graceful, easy manner. Almost every subject is illustrated with cases from the doctor's own practice; nor has he neglected to put before us the great advantage of homœopathic treatment in surgical diseases. The work is in every respect up to the requirements of the times.

"Taken altogether, we have no book in our literature that we are more proud of.

"One word of commendation to the publishers is naturally drawn from us as we compare this handsome, clearly-printed, neatly-bound volume with the last edition. The difference is so palpable that there is no necessity of making further comparisons."—*Homœopathic Times*.

HELMUTH, DR. W. T. Supra-Pubic Lithotomy. The High

Operation for Stone—Epicystotomy—Hypogastric Lithotomy—"The High Apparatus." By WM. TOD HELMUTH, M.D., Professor of Surgery in the N. Y. Hom. Med. College; Surgeon to the Hahnemann Hospital and to Wards Island Homœopathic Hospital, N. Y. 98 quarto pp. 8 lithographic plates. Cloth. Price, \$4.00

A superb quarto edition, with lithographic plates, printed in five colors, and illustrated by charts and numerous wood-cuts.

"One can see on every page that Prof. Helmuth worked here *con amore*, that his whole soul was in it, and that supra-public operation is his dream by night. The whole work is so practical that any one can understand its meaning, and our friend deserves the thanks of the surgical fraternity for the earnestness with which he pleads his case."—*North American Journal of Homœopathy*.

"The name of the author is a certain guarantee of its literary and scientific value, and all . . . know at once it is no common production. . . . It is not necessary to go into any extended notice of this bold and original work; we can properly say that Helmuth has opened up a new field for study, ably and abundantly fortified his positions, and given encouragement for the hope that even the low ratio of mortality from lithotomy operations that modern methods have secured, will, in the future, be still further reduced."—*Medical Counselor*.

"Dr. Helmuth is well known as a skillful, bold and successful operator. . . . Dr. Helmuth presents the reader with tables relating to the cases on record in which these operations have been performed. They comprise 527 operations, of which 350 were successful, 135 fatal, and in 34 result was unknown. Dr. Helmuth has himself performed the operation four times, with two recoveries and two deaths. . . . The work redounds greatly to his honor on account of its highly scientific character,"—*British Journal of Homœopathy*.

HEINIGKE, DR. CARL. *Pathogenetic Outlines of Homœopathic Drugs.* By DR. CARL HEINIGKE, of Leipzig. Translated from the German, by EMIL TIETZE, M.D., of Philadelphia. Pp. 576. 8vo. Cloth, . . . \$3.50

"The reader of this work will gain more practical knowledge of a given drug from its pages in the same space of time than from any other book on the same subject.

"The publishers' part of the work has been executed with the usual elegance, neatness and durability which characterizes all their publications which we have seen.

"To the English reading portion of our colleagues, this book will be a boon to be appreciated, in proportion that it is consulted, and will save them many weary researches when in doubt of the true homœopathic remedy."—*American Homœopath*.

HERING, DR. CONSTANTINE. *Condensed Materia Medica.* Third edition, more Condensed, Revised, Enlarged and Improved. 988 pages. Large 8vo. Half morocco. . . . \$7.00

This well-known standard work on Condensed Materia Medica needs no array of flattering press notices to recommend it anew to the rising homœopathic profession. It has nobly stood the test, and for many years to come will, no doubt, take the lead among the works of its class. The important task of revising the text for this, the third edition, was entrusted to Dr. E. A. Farrington, Professor of Materia Medica, whose able editorship has resulted in all that could be desired.

We quote from the editor's preface:

"In the preparation of this . . . edition . . . additions have been made, and a few typographical errors corrected, but in justice to the lamented author, no alterations have been made in the substance of the text as he left it.

"More than twenty new remedies, arranged after the plan of the book, are given in full; and over forty partially proved drugs, with brief but distinctive indications, are added to the sections on 'Relationship.' Besides all this, about six hundred choice and well attested symptoms have been incorporated in their proper place in the text. All the late works have been drawn upon for the new material, and even private sources have been unsparingly taxed; but still, great caution has been used in making selections. The plans and purposes of the work demand clinical as well as pathogenetic symptoms. But of the former sort only those have been employed which agree with the provings, and which show every evidence of genuineness. Such discrimination demands the exercise of one's best judgment, and the expenditure of much time. But it is believed the benefits to be derived far outweigh the trouble. The book is now offered to the profession and to students, not as a rival of other works, but as a rich treasury full of information common to homœopathic literature, and also of gleanings from the vast collection which Dr. Hering made during a busy half century of medical study and labor."

We subjoin the following notices of a former edition of this work.

"This work, the author tells us, is made up from the manuscript prepared for the 'Guiding Symptoms,' and is intended to give the student an idea of the main features of each drug in as narrow a compass as possible. It is, in fact, the 'Guiding Symptoms' boiled down. It has therefore a value of its own in enabling the student or practitioner to see quickly the chief symptoms of each medicine. Its name indicates its nature exactly, the condensation being more valuable from the hands of Dr. Hering than it might be from others of smaller experience. To those who wish to have such an aid to the *Materia Medica* beside them, we can recommend it."—*Monthly Homœopathic Review* for September, 1880.

"The favor with which this work has been received, and the rapidity with which it has been adopted as a text-book in all the homœopathic medical colleges, attests most fully its value. Embracing the rich experience and the extensive learning of the author, its authority is unquestioned. The relationship of the drugs is peculiarly valuable, and can be found nowhere else outside of Bœnninghausen. The schema is according to Hahnemann, similarity in symptoms being clearly indicated. Hering's *Materia Medica* has now become the leading work of its kind in our school. Its broad pages lie invitingly before you. You read over the symptomatology of each drug with the consciousness that each and every line has been well considered before incorporation, and that it is a storehouse of wealth from which every worker can draw his supplies. The appearance of the work reflects credit upon the publishers, who have already gained their reputation as book publishers of the first rank."—*Homœopathic News*.

HERING, DR. CONSTANTINE. Domestic Physician. Seventh American Edition. 464 Pp. \$2.50

The present editor, Claude R. Norton, M.D., a former assistant of Dr. Hering, undertook, at his desire, the task of superintending the publication of the work. Some additions to the text have been made, a few remedies introduced, and, at times, slight alterations in the arrangement effected, but the well-known views of the author have been respected in whatever has been done; but for unavoidable reasons, the issue of the present edition has been delayed until this time.

HOMŒOPATHIC POULTRY PHYSICIAN (Poultry Veterinarian); or, Plain Directions for the Homœopathic Treatment of the most Common Ailments of Fowls, Ducks, Geese, Turkeys, and Pigeons, based on the author's large experience, and compiled from the most reliable sources, by DR. FR. SCHRÖTER. Translated from the German. 84 pages. 12mo. Cloth, \$0.50

We imported hundreds of copies of this work in the original German for our customers, and as it gave good satisfaction, we thought it advisable to give it an English dress, so as to make it available to the public generally. The little work sells very fast, and our readers will doubtless often have an opportunity to draw the attention of their patrons to it.

HOMŒOPATHIC COOKERY. Second edition. With additions by a Lady of an American Homœopathic Physician. Designed chiefly for the Use of such Persons as are under Homœopathic Treatment. 176 pages. \$0.50

HULL'S JAHR. A New Manual of Homœopathic Practice. Edited, with Annotations and Additions, by F. G. SNELLING, M.D. Sixth American edition. With an Appendix of the New Remedies, by C. J. HEMPEL, M.D. 2 vols. 2076 pages, \$9.00

This first volume, containing the symptomatology, gives the complete pathogenesis of two hundred and eighty-seven remedies, besides a large number of new remedies added by Dr. Hempel, in the appendix. The second volume contains an admirably arranged Repertory. Each chapter is accompanied by copious clinical remarks and the concomitant symptoms of the chief remedies for the malady treated of, thus imparting a mass of information, rendering the

JAHR, DR. G. H. G. Therapeutic Guide; the most Important results of more than Forty Years Practice. With Personal Observations regarding the truly reliable and practically verified Curative Indications in actual cases of disease. Translated, with Notes and New Remedies, by C. J. HEMPEL, M.D. 546 pages, \$3.00

"With this characteristically long title, the veteran and indefatigable Jahr gives us another volume of homœopathics. Besides the explanation of its purport contained in the title itself, the author's preface still further sets forth its distinctive aim. It is intended, he says, as a 'guide to beginners, where I only indicate the most important and decisive points for the selection of a remedy, and where I do not offer anything but what my own individual experience, during a practice of forty years, has enabled me to verify as *absolutely decisive* in choosing the proper remedy.' The reader will easily comprehend that, in carrying out this plan, I had rigidly to exclude all cases concerning which I had no experience of my own to offer. . . . We are bound to say that the book itself is agreeable, chatty, and full of practical observation. It may be read straight through with interest, and referred to in the treatment of particular cases with advantage."—*British Journal of Homœopathy*.

JAHR, DR. G. H. G. The Homœopathic Treatment of Diseases of Females and Infants at the Breast. Translated from the French by C. J. HEMPEL, M.D. 422 pages. Half leather, \$2.00

This work deserves the most careful attention on the part of homœopathic practitioners. The diseases to which the female organism is subject are described, with the most minute correctness, and the treatment is likewise indicated with a care that would seem to defy criticism. No one can study this work without deriving both profit and pleasure.

JONES, DR. SAMUEL A. The Grounds of a Homœopaths Faith. Three Lectures, delivered at the request of Matriculates of the Department of Medicine and Surgery (Old School) of the University of Michigan. By SAMUEL A. JONES, M.D., Professor of Materia Medica, Therapeutics, and Experimental Pathogenesis in the Homœopathic Medical College of the University of Michigan, etc., etc. 92 Pages. 12mo. Cloth (per dozen, \$3), \$0.30

The first Lecture is on *The Law of Similars; its Claim to be a Science in that it Enables Preshion*. The second Lecture, *The Single Remedy a Necessity of Science*. The third Lecture, *The Minimum Dose an Inevitable Sequence*. A fourth Lecture, on *The Dynamization Theory*, was to have finished the course, but was prevented by the approach of final examinations, the preparation for which left no time for hearing evening lectures. The *Lectures* are issued in a convenient size for the coat-pocket; and as an earnest testimony to the truth, we believe they will find their way into many a homœopathic household.

JOHNSON, DR. I. D. Therapeutic Key; or Practical Guide for the Homœopathic Treatment of Acute Diseases. Tenth edition. 347 pages. Bound in linen, \$1.75
Bound in flexible leather cover, 2.25

The same including twelve insets properly lined and headed for daily visits, \$3.25, or the insets separately at \$1 per set of twelve. Each inset will be found sufficient for a month's visits in ordinary practice and well supplies the usual visiting list, and this without a perceptible increase in bulk.

This has been one of the best selling works on our shelves; more copies being in circulation of this than of any two other professional works put together. It is safe to say that there are but few homœopathic practitioners in this country but have one or more copies of this little remembrancer in their

"This is a wonderful little book, that seems to contain nearly everything pertaining to the practice of physic, and all neatly epitomized, so that the book may be carried very comfortably in the pocket, to serve as a source for a refresher in a case of need.

"It is a marvel to us how the author has contrived to put into 347 pages such a vast amount of information, and all of the very kind that is needed. No wonder it is in its tenth edition.

"Right in the middle of the book, under P, we find a most useful little chapter, or article, on 'Poisonings,' telling the reader what to do in such cases.—*Homœopathic World*, London.

JOHNSON, DR. I. D. A Guide to Homœopathic Practice. Designed for the Use of Families and Private Individuals. 494 pages. Cloth, \$2.00

This is the latest work on Domestic Practice issued, and the well and favorably known author has surpassed himself. In this book fifty-six remedies are introduced for internal application, and four for external use. The work consists of two parts. Part I is subdivided into seventeen chapters, each being devoted to a special part of the body, or to a peculiar class of disease. Part II contains a short and concise *Materia Medica*. The whole is carefully written with a view of avoiding technical terms as much as possible, thus insuring its comprehension by any person of ordinary intelligence.

"Family Guides are often of great service, not only in enabling individuals to relieve the trifling maladies of such frequent occurrence in every family, but in the graver forms of disease, by prompt action to prepare the way for the riper intelligence of the physician.

"The work under notice seems to have been carefully prepared by an intelligent physician, and is one of the handsomest specimens of book-making we have seen from the house of Boericke & Tafel, its publishers."—*Homœopathic Times*.

LAURIE and McCLATCHEY. The Homœopathic Domestic Medicine. By JOSEPH LAURIE, M.D., *Ninth American*, from the Twenty-first English edition. Edited and revised, with numerous and important additions, and the introduction of the new remedies. By R. J. McCLATCHEY, M.D. 1044 pages. 8vo. Half morocco, . . . \$5.00

"We do not hesitate to endorse the claims made by the publishers, that this is the most complete, clear, and comprehensive treatise on the domestic homœopathic treatment of disease extant. This handsome volume of nearly eleven hundred pages is divided into six parts. Part I is introductory, and is almost faultless. It gives the most complete and exact directions for the maintenance of health, and of the method of investigating the condition of the sick, and of discriminating between different diseases. It is written in the most lucid style, and is above all things wonderfully free from technicalities. Part II. treats of symptoms, character, distinctions, and treatment of general diseases, together with a chapter on casualties. Part III. takes up diseases peculiar to women. Part IV. is devoted to the disorders of infancy and childhood. Part V. gives the characteristic symptoms of the medicines referred to in the body of the work, while part VI. introduces the repository."—*Hahnemannian Monthly*.

"Of the usefulness of this work in cases where no educated homœopathic physician is within reach, there can be no question. There is no doubt that domestic homœopathy has done much to make the science known; it has also saved lives in emergencies. The practice has never been so well presented to the public as in this excellent volume."—*New. Eng. Med. Gazette*.

LILIENTHAL, DR. S. Homœopathic Therapeutics. By S. LILIENTHAL, M.D., Editor of North American Journal of Homœopathy, Professor of Clinical Medicine and Psychology in the New York Homœopathic Medical College, and Professor of Theory and Practice in the New York College Hospital for Women, Etc. Second edition. 835 pages. 8vo. Cloth, \$5.00
Half morocco, 6.00

"Certainly no one in our ranks is so well qualified for this work as he who has done it, and in considering the work done, we must have a true conception of the proper sphere

of such a work. For the fresh graduate, this book will be invaluable, and to all such we unhesitatingly and very earnestly commend it. To the older one, who says he has no use for this book, we have nothing to say. He is a good one to avoid when well, and to dread when ill. We also hope that he is severely an *unicum*."—*Prof. Samuel A. Jones in American Observer*.

" It is an extraordinary useful book, and those who add it to their library will never feel regret, for we are not saying too much in pronouncing it the *best work on therapeutics* in homœopathic (or any other) literature. With this under one elbow, and Hering's or Allen's *Materia Medica* under the other, the careful homœopathic practitioner can refute Niemayer's too confident assertion, 'I declare it idle to hope for a time when a medical prescription should be the simple resultant of known quantities.' Doctor, by all means buy Lillenthal's *Homœopathic Therapeutics*. It contains a mine of wealth."—*Prof. Chas. Gatchel in Ibid.*"

LUTZE, DR. A. *Manual of Homœopathic Theory and Practice.* Designed for the use of Physicians and Families. Translated from the German, with additions by C. J. HEMPEL, M.D. From the sixtieth thousand of the German edition. 750 pp. 8vo. Half leather, \$2.50

MALAN, H. *Family Guide to the Administration of Homœopathic Remedies.* 112 pages. 32mo. Cloth, . . . \$0.30

MANUAL OF HOMŒOPATHIC VETERINARY PRACTICE. Designed for all kinds of Domestic Animals and Fowls, prescribing their proper treatment when injured or diseased, and their particular care and general management in health. Second and enlarged edition. 684 pages. 8vo. Half morocco, . . . \$5.00

"In order to rightly estimate the value and comprehensiveness of this great work, the reader should compare it, as we have done, with the best of those already before the public. In size, fulness, and practical value it is head and shoulders above the very best of them, while in many most important disorders it is far superior to them altogether, containing, as it does, recent forms of disease of which they make no mention."—*Hahnemannian Monthly*.

MARSDEN, DR. J. H. *Handbook of Practical Midwifery, WITH FULL INSTRUCTIONS FOR THE HOMŒOPATHIC TREATMENT OF THE DISEASES OF PREGNANCY, AND THE ACCIDENTS AND DISEASES INCIDENT TO LABOR AND THE PUERPERAL STATE.* J. H. MARSDEN, A.M., M.D., 315 pages. Cloth, . . . \$2.25

"It is seldom we have perused a text-book with such entire satisfaction as this. The author has certainly succeeded in his design of furnishing the student and young practitioner, within as narrow limits as possible, all necessary instruction in practical midwifery. The work shows on every page extended research and thorough practical knowledge. The style is clear, the array of facts unique, and the deductions judicious and practical. We are particularly pleased with his discussion of the management of labor, and the management of mother and child immediately after the birth, but much is left open to the common sense and practical judgment of the attendant in peculiar and individual cases."—*Homœopathic Times*.

MORGAN, DR. W. *The Text-book for Domestic Practice; being plain and concise directions for the Administration of Homœopathic Medicines in Simple Ailments.* 191 pages. 32mo. Cloth, . . . \$0.50
This is a concise and short treatise on the most common ailments, printed in convenient size for the pocket; a veritable traveler's companion.

NORTON, DR. GEO. S. *Ophthalmic Therapeutics.* By GEO. S. NORTON, M.D., Professor of Ophthalmology in the College of the New York Ophthalmic Hospital, Senior Surgeon to the New York Ophthalmic Hospital, etc. With an introduction by PROF. T. F. ALLEN, M.D. Second edition. Re-written and revised, with copious additions. Pp. 342. 8vo. Cloth, . . . \$2.50

The second edition of Allen & Norton's *Ophthalmic Therapeutics* has now been issued from the press. It has been re-written, revised and considerably enlarged by Professor Norton, and will, without doubt, be as favorably received as the first edition—out of print since several years. This work embodies the clinical experiences garnered at the N. Y. Ophthalmic Hospital, than which a better appointed and more carefully conducted establishment does not exist in this country. Diseases of the eye are steadily on the increase, and no physician can afford to do without the practical experience as laid down in the sterling work under notice.

RAUE, DR. C. G. *Special Pathology and Diagnostics, with Therapeutic Hints.* Third edition, re-written and enlarged. Pp. 1,094. Large 8vo. Half morocco or sheep, \$8.00

This is a book which has made for itself a name and a place in the literature of our Homœopathic school of medicine, and, in connection with this *Third Edition*, it is enough to say that the work has been greatly improved and considerably enlarged, and, as Homœopathy now stands, is doubtless as near as possible to all that can be desired. Practitioners who own the first and second editions, will find it to their interest to own also the third with its new and valuable features, and thus keep pace with the progress of the school.

"We cordially welcome [it] as not only a scientific but thoroughly practical book, and altogether the best in general therapeutics which has for many years been presented to the public."—*New York Medical Times*.

REIL, DR. A. *ACONITE, Monograph on, its Therapeutic and Physiological Effects, together with its Uses and Accurate Statements, derived from the various Sources of Medical Literature.* By A. REIL, M.D. Translated from the German by H. B. Millard, M.D. Prize essay. 168 pages, \$0.60

"This Monograph, probably the best which has ever been published upon the subject, has been translated and given to the public in English, by Dr. Millard, of New York. Apart from the intrinsic value of the work, which is well known to all medical German scholars, the translation of it has been completed in the most thorough and painstaking way; and all the Latin and Greek quotations have been carefully rendered into English. The book itself is a work of great merit, thoroughly exhausting the whole range of the subject. To obtain a thorough view of the spirit of the action of the drug, we can recommend no better work."—*North American Journal*.

RUSH, DR. JOHN. *Veterinary Surgeon.* The Hand-book to Veterinary Homœopathy; or, the Homœopathic Treatment of Horses, Cattle, Sheep, Dogs and Swine. From the London edition. With numerous additions from the Seventh German edition of Dr. F. E. Gunther's "*Homœopathic Veterinary*." Translated by J. F. SHEEK, M.D. 150 pages. 18mo. Cloth, \$0.50

SCHAEFER, J. C. *New Manual of Homœopathic Veterinary Medicine.* An easy and comprehensive arrangement of Diseases, adapted to the use of every owner of Domestic Animals, and especially designed for the farmer living out of the reach of medical advice, and showing him the way of treating his sick Horses, Cattle, Sheep, Swine and Dogs, in the most simple, expeditious, safe and cheap manner. Translated from the German, with numerous additions from other veterinary manuals, by C. J. HEMPEL, M.D. 321 pages. 8vo. Cloth, \$2.00

SHARP'S TRACTS ON HOMŒOPATHY, each, 5
Per hundred, \$3.00

No. 1. What is Homœopathy?	No. 7. The Principles of Homœopathy.
No. 2. The Defence of Homœopathy.	No. 8. Controversy on “
No. 3. The Truth of “	No. 9. Remedies of “
No. 4. The Small Doses of “	No. 10. Proving of “
No. 5. The Difficulties of “	No. 11. Single Medicines of “
No. 6. Advantages of “	No. 12. Common sense of “

SHARP'S TRACTS, complete set of 12 numbers, . . . \$0.50
Bound, \$0.75

SMALL, DR. A. E. *Manual of Homœopathic Practice*, for the use of Families and Private Individuals. Fifteenth enlarged edition. 831 pages. 8vo. Half leather, . . . \$2.50

— **Manual of Homœopathic Practice.** Translated into German by C. J. HEMPEL, M.D. Eleventh edition. 643 pages. 8vo. Cloth, \$2.50

STAPP, DR. E. *Additions to the Materia Medica Pura.* Translated by C. J. HEMPEL, M.D. 292 pages. 8vo. Cloth, . . \$1.50

This work is an appendix to Hahnemann's *Materia Medica Pura*. Every remedy is accompanied with extensive and most interesting clinical remarks, and a variety of cases illustrative of its therapeutical uses.

TESSIER, DR. J. P. *Clinical Remarks concerning the Homœopathic Treatment of Pneumonia*, preceded by a Retrospective View of the Allopathic *Materia Medica*, and an Explanation of the Homœopathic Law of Cure. Translated by C. J. HEMPEL, M.D. 131 pages. 8vo. Cloth, . . . \$0.75

TESTE. *A Homœopathic Treatise on the Diseases of Children.* By ALPH. TESTE, M.D. Translated from the French by EMMA H. COTE. Fourth edition. 345 pages. 12mo. Cloth, . . . \$1.50

This sterling work is by no means a new applicant for the favorable consideration of the profession, but is known to the older physicians since many years, and would be as well known to the younger had it not been out of print for nearly eight years. However, as orders for the work were persistently received from all quarters, we concluded to resurrect the book as it were, and purchasing the plates from the quondam publishers, we re-issued it in a much improved form, *i. e.*, well printed on excellent paper. Dr. Teste's work is unique, in that in most cases it recommends for certain affections remedies that are not usually thought of in connection therewith; but, embodying the results of an immense practical experience, they rarely fail to accomplish the desired end.

VERDI, DR. T. S. *Maternity, a Popular Treatise for Young Wives and Mothers.* By TULLIO SUZZARA VERDI, A.M., M.D., of Washington, D.C. 450 pages. 12mo. Cloth, . . . \$2.00

"No one needs instruction more than a young mother, and the directions given by Dr. Verdi in this work are such as I should take great pleasure in recommending to all the young mothers, and some of the old ones, in the range of my practice."—*George E. Shipman, M.D., Chicago, Ill.*

"Dr. Verdi's book is replete with useful suggestions for wives and mothers, and his medical instructions for home use accord with the maxims of my best experience in practice."—*John F. Gray, M.D., New York City.*

— **Mothers and Daughters: Practical Studies for the Conservation of the Health of Girls.** By TULLIO SUZZARA VERDI, A.M., M.D. 287 pages. 12mo. Cloth, . . . \$1.50

"The people, and especially the women, need enlightening on many points connected with their physical life, and the time is fast approaching when it will no longer be thought singular or 'Yankeeish' that a woman should be instructed in regard to her sexuality, its organs and their functions. . . . Dr. Verdi is doing a good work in writing such books, and we trust he will continue in the course he has adopted of educating the mother and daughters. The book is handsomely presented. It is printed in good type on fine paper, and is neatly and substantially bound."—*Hahnemannian Monthly*.

VON TAGEN Biliary Calculi, Perineorrhaphy, Hospital Gangrene, and its Kindred Diseases. 154 pages. 8vo. Cloth, \$1.25

VERDI, CIRO DE SUZZARA, M.D. Progressive Medicine: A Scientific and Practical Treatise on Diseases of the Digestive Organs and the Complications arising therefrom. By CIRO DE SUZZARA VERDI, M.D., late Acting Assistant Surgeon at Balfour Hospital, Professor of Physiology and Pathology in the Cleveland Homœopathic College for Women.

This work is now passing through the press, and fuller particulars will be given later.

WILLIAMSON, DR. W. Diseases of Females and Children, and their Homœopathic Treatment. Third enlarged edition. 256 pages, \$1.00

This work contains a short treatise on the homœopathic treatment of the diseases of females and children, the conduct to be observed during pregnancy, labor and confinement, and directions for the management of new-born infants.

WILSON, DR. T. P. Special Indications for Twenty-five Remedies in Intermittent Fever. By T. P. WILSON, M.D., Professor of Theory and Practice, Ophthalmic and Aural Surgery, University of Michigan. 1880. 53 pages. 18mo. Cloth, \$0.40

This little work gives the characteristic Indications in Intermittent Fever of twenty-five of the mostly used remedies. It is printed on heavy writing paper, and plenty of space is given to make additions.

The name of the drug is printed on the back of the page containing the symptoms, in order that the student may the better exercise his memory.

WINSLOW, DR. W. H. The Human Ear and Its Diseases. A Practical Treatise upon the Examination, Recognition and Treatment of Affections of the Ear and Associate Parts, Prepared for the Instruction of Students and the Guidance of Physicians. By W. H. WINSLOW, M.D., Ph.D., Oculist and Aurist to the Pittsburgh Homœopathic Hospital, etc., etc., with one hundred and thirty-eight illustrations. Pp. 526. 8vo. Cloth. Price, \$4.50

"It would ill-become a non-specialist to pass judgment upon the intrinsic merits of Dr. Winslow's book, but even a general reader of medicine can see in it an author who has a firm grasp and an intelligent apprehension of his subject. There is about it an air of self-reliant confidence, which, when not offensive, can come only from a consciousness of knowing the matter in hand, and we have never read a medical work which would more quickly lead us to give its author our confidence in his ministrations. This is always the consequence of honest and earnest and inclusive scholarship, and this author is entitled to his meed."—*Dr. S. A. Jones in American Observer*.

WORCESTER, DR. S. Repertory to the Modalities. In their Relations to Temperature, Air, Water, Winds, Weather and Seasons. Based mainly upon Hering's Condensed Materia Medica, with additions from Allen, Lippe and Hale. Compiled and arranged by SAMUEL WORCESTER, M.D., Salem, Mass., Lecturer on Insanity and its Jurispru-

dence at Boston University School of Medicine, etc., etc. 1880. 160 pages. 12mo. Cloth, \$1.25

"This *Repertory to the Modalities* is indeed a most useful undertaking, and will, without question, be a material aid to rapid and sound prescribing where there are prominent modalities. The first chapter treats of the sun and its effects, both beneficial and hurtful, and we see at a glance that *strontium carb.*, *anacardium*, *conium mac.*, and *kali bich.* are likely to be useful to patients who like basking in the sun. No doubt many of these modalities are more or less fanciful; still a great many of them are real and of vast clinical range.

"The book is nicely printed on good paper, and strongly bound. It contains 160 pages. We predict that it will meet with a steady, long-continued sale, and in the course of time be found on the tables of most of those careful and conscientious prescribers who admit the philosophical value of (for instance) lunar aggravations, effects of thunder-storms, etc. And who, being without the priggishness of mere brute science, does not?"—*Homœopathic World*.

WORCESTER, DR. S. Insanity and Its Treatment. Lectures on the Treatment of Insanity and Kindred Nervous Diseases. By SAMUEL WORCESTER, M.D., Salem, Mass. Lecturer on Insanity, Nervous Diseases and Dermatology, at Boston University School of Medicine, etc., etc. 262 pages, \$3.50

Dr. Worcester was for a number of years assistant physician of the Butler Hospital for the Insane, at Providence, R. I., and was appointed shortly after as Lecturer on Insanity and Nervous Diseases to the Boston University School of Medicine. The work, comprising nearly five hundred pages, will be welcomed by every homœopathic practitioner, for every physician is called upon sooner or later to undertake the treatment of cases of insanity among his patron's families, inasmuch as very many are loth to deliver any afflicted member to a public institution without having first exhausted all means within their power to effect a cure, and the family physician naturally is the first to be put in charge of the case. It is, therefore, of paramount importance that every homœopathic practitioner's library should contain such an indispensable work.

"The basis of Dr. Worcester's work was a course of lectures delivered before the senior students of the Boston University School of Medicine. As now presented with some alterations and additions, it makes a very excellent text-book for students and practitioners. Dr. Worcester has drawn very largely upon standard authorities and his own experience, which has not been small. In the direction of homœopathic treatment, he has received valuable assistance from Drs. Talcott and Butler, of the New York State Asylum. It is not, nor does it pretend to be, an exhaustive work; but as a well-digested summary of our present knowledge of insanity, we feel sure that it will give satisfaction. We cordially recommend it."—*New England Medical Gazette*.

HERING'S CONDENSED MATERIA MEDICA

THIRD EDITION.

This well-known standard work on Condensed Materia Medica needs no array of flattering press notices to recommend it anew to the rising Homœopathic profession. It has nobly stood the test, and for many years to come will, no doubt, take the lead among the works of its class. The important task of revising the text for this, the third edition, was entrusted to Dr. E. A. Farrington, Professor of Materia Medica, whose able editorship has resulted in all that could be desired.

We quote from the editor's preface:

"In the preparation of this, the third edition, **additions** have been made, and a few typographical errors corrected, but in justice to the lamented author, no alterations have been made in the substance of the text as he left it.

"More than twenty new remedies, arranged after the plan of the book, are given in full; and over forty partially proved drugs, with brief but distinct indications, are added to the sections on 'Relationship.' Besides all this, about six hundred choice and well attested symptoms have been incorporated in their proper place in the text. All the late works have been drawn upon for new material, and even private sources have been unsparingly taxed; but still, great caution has been used in making selections. The plans and purposes of the work demand clinical as well as pathogenetic symptoms. But of the former sort only those have been employed which agree with the provings, and which show every evidence of genuineness. Such discrimination demands the exercise of one's best judgment, and the expenditure of much time. But it is believed the benefits to be derived far outweigh the trouble. The book is now offered to the profession and to students, not as a rival of other works, but as a rich treasury full of information common to homœopathic literature, and also gleanings from the vast collection which Dr. Hering made during a busy half-century of medical study and labor."

Price, Bound in Half Morocco, Pp. 968, large 8vo., \$7.00
